Innovation Engineers

COMPLIMENTARY WORKING SESSION · 1 TO 2 DAYS
MICROSOFT AZURE

MIGRATION HACKATHON

One workload in. A running Azure workload out.

One to two days with your team and ArchitectNow engineers to migrate or modernize a real workload to Azure. We build together, in your tenant or ours, and hand you the design and the plan to repeat it.

1 to 2 days	1	2	3
Hackathon build, on site or virtual	Working Azure workload, live	Hosting options: your tenant or our hackathon tenant	Deliverables: design, workload, plan to scale

WHAT YOU GET

Three outcomes, built in the room.

01 Approach and Design
Target architecture, method and services: key decisions documented.

02 Working Workload on Azure
Migrated or modernized and demonstrated live: real, not mocked up.

03 Action Plan to Scale
Sequenced steps to production and the next wave, owners named.

HOW IT WORKS

Six steps. Two before, three in the room, one after.

01 · Pre-hackathon
Planning Session
Pick the workload, the method and the Azure services in scope. Choose hosting, your tenant or ours, and collaborative vs competitive format.

02 · Pre-hackathon
Readiness and Agenda
Confirm the agenda and readiness (source access, subscription, network, identity) and onboard the team.

03 · Hackathon
Vision the Approach
Align on target architecture, method and the key design decisions before the build starts.

04 · Hackathon
Execute the Build
Build hands-on with ArchitectNow engineers side by side: pairing, unblocking, keeping the build on the clock.

05 · Hackathon
Present the Results
Demo the running workload to stakeholders. Optional competitive format: judges score the working build, Well-Architected fit and run-cost; winner takes the prize.

06 · Post-hackathon
Operationalize
Agree the path to production and the next wave: a natural entry to a migration / modernization engagement.

WHY ARCHITECTNOW

- **A migration, not a plan for one**
  A real workload moves during the session, so the estimate that follows rests on work already done once.
- **Two ways to host it**
  Your tenant when access is ready, our hackathon tenant when it is not.
- **Bring your own workload**
  The menu is a starting point. The best candidate is the workload you already need to move.
- **The second wave gets cheaper**
  The method and the decisions are written down while they are fresh, which is what makes the next workload faster.

Prove your migration / modernization in 1 to 2 days.
30-minute sponsor call to pick your workload.
