A true Unified Commerce Solution for Microsoft Dynamics AX

- Adapting and employing Microsoft Dynamics AX business logic in communications across all systems, the Avensia Storefront connector allows for seamless import of all product catalog information to Episerver. Information like translations, relations, variants, retail kits and assignments made to groups and agreements is thus made searchable and instantly available for your e-commerce solution.
- In addition, the Avensia Storefront starter site provides you with a fully functional and customizable web shop that utilizes all retail features available in Microsoft Dynamics AX, including the controls distributed for the complex checkout flow.
