

Tailored Compliance for Microsoft 365

Save work and reduce risk

One size does not fit all

Microsoft 365 includes a lot of features to help you manage your enterprise content and collaboration, but to take advantage of them requires planning and experience. Companies in highly regulated industries like Financial Services, Healthcare, Pharmaceuticals, and Defense not only need to comply with multiple layers of regulation, but also with internal policies. It's critical to understand how to configure Microsoft 365, and in some cases to extend it with customizations that automatically enforce business rules.

The first step is to evaluate the built-in security and compliance features, figure out if they're appropriate, and if so, how they should be configured. In some cases, the out-of-the-box features don't go all the way to meeting a company's needs; examples include:

- Controlled and consistent provisioning of SharePoint sites and Microsoft Teams, with approvals, templates, security settings, and hosting options set automatically
- Enhanced classification that associates content with specific information such as business unit, geography, user roles, sensitivity, regulatory licensing
- Enhanced access control and auditing for controlled information

Don't go it alone

It takes experience to effectively plan and configure Office 365 compliance features, and to build on them. 12:34 MicroTechnologies can reduce risk and timelines by applying their experience to your enterprise. We can help you select the Office 365 security and compliance features you need and configure them properly. And we can add automated governance and compliance processes if needed to tailor the solution to your organization's needs. Please contact us at info@1234micro.com to learn more!

Architecture design session

The first step is an Architecture Design Session, in which 12:34 would work closely with company stakeholders to envision and provide a high-level design of a solution tailored to your company's needs. These sessions are complimentary to qualified customers, so what are you waiting for? Reach out today to info@1234micro.com to schedule an Architecture Design Session and discover the possibilities!
