

Albiddoc: Intelligent Bidding System

Intelligent, efficient, and high-quality proposal generation platform

Intellnet Technology Co., LTD presents next-generation bidding
solutions powered by Azure GPT

System Overview and Capabilities

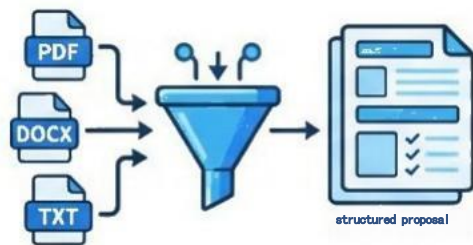

Core Mission

Generate and manage bid documents automatically.

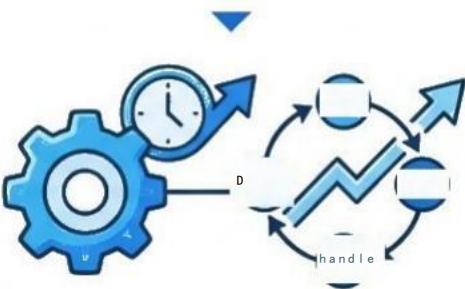

technology stack

Built on the robust Azure GPT architecture.

Key functions

Convert PDF/DOCX/TXT files seamlessly into structured proposals.

value

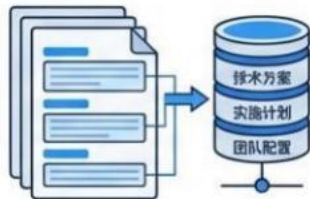

The complex life cycle of the automatic bidding documents.

Intelligent Analysis and Data Extraction

automated analysis

Intelligent decomposition of bidding requirements.

key information extraction

Identify technical solutions, implementation plans, and team configurations.

formatting flexibility

Powerful manual upload or batch import support.

Preview Mode

Preview real-time content with configurable field generation.

modular content architecture

Project Understanding and Overall Solution, Technical Solution and Project Organization and Staffing

starting plan

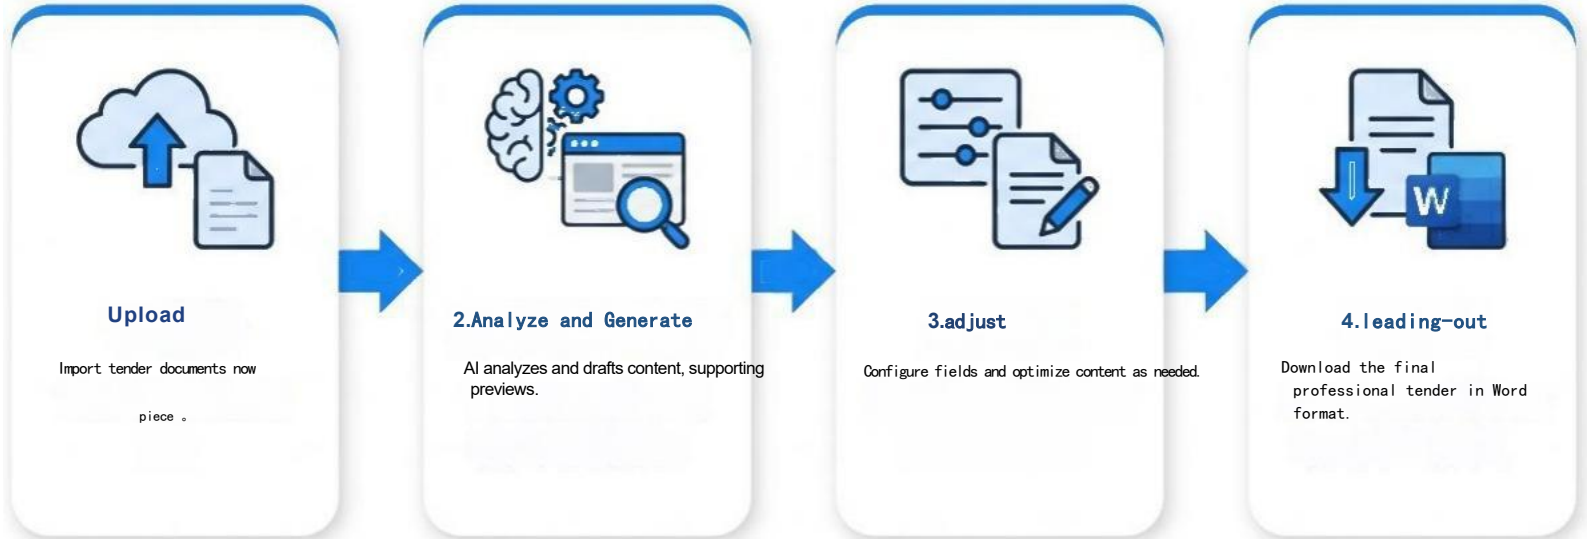

**Quality Assurance, Risk Control and
After-sales Service**

**contract response and deviation
table**

User workflow optimization

Artificial Intelligence-driven Content Enhancement

GPT-powered copywriting

Efficient text generation.

dynamic learning

AI recognition patterns improve document quality over time.

No template mode

Go beyond rigid templates to enable dynamic, context-aware creation.

automated administration

Intelligent data storage and retrieval.

Security and Compliance Framework

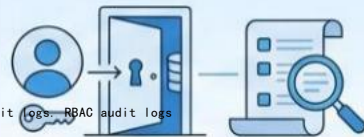

Full encryption

Ensure the security of both transmitted and static data.

access control

Strict role-based access control (RBAC) and audit logs. RBAC audit logs

Global Standards

Complies with international regulations.

regional adaptation

To meet the various regulatory requirements of different regions.

Operational advantages

producti veness

The preparation time is greatly reduced.

intelli gence

The dynamic learning ability continues to optimize the output.

flexibility

Supports SaaS cloud or on-premises deployment.

Enterprise Security

Data is protected with bank-grade security standards.

Verified business impact

Efficiency improvement

The bidding preparation speed is increased by more than 60%.

cost reduction

Reduce manual processing costs by 90%.

quality standardization

It can improve the consistency and professionalism of the documents.

resource optimization

Freeing human experts for strategic missions.

Roadmap and Strategic Vision
