

Huamei 365® MailBlink Agent

AI-Powered Email Insight & Business
Collaboration

MailBlink Agent Overview

Do you often face the challenge of handling a flood of emails every day? Customer inquiries, partnership invitations, after-sales issues, and even approvals and internal communication—coming in multiple languages and formats. Managing all of this is time-consuming and prone to omissions. **MailBlink Agent** is designed to solve exactly these problems.

MailBlink Agent is an agent embedded into your existing enterprise systems, transforming complex email workflows into simple and efficient processes.

When an email arrives, MailBlink Agent automatically classifies, prioritizes, and tags it, while instantly generating summaries and even draft replies. This allows users to process key information directly within their inbox.

Beyond inbox management, MailBlink Agent seamlessly connects action items, approvals, and progress tracking into Teams, Planner, Approvals, and other enterprise collaboration platforms—enabling a smooth transition from “*reading emails*” to “*getting work done*.”

It doesn’t just handle incoming emails. MailBlink Agent also offers progress tracking, reporting, and retrospective analysis. Users can customize views by day, week, or project, with the system automatically generating performance reports to help managers and teams stay on top of communication flows, prevent oversights, and maintain full visibility.

In short, MailBlink Agent makes enterprise email management more efficient, intelligent, and controllable—elevating email from a simple communication channel into a true business collaboration tool.

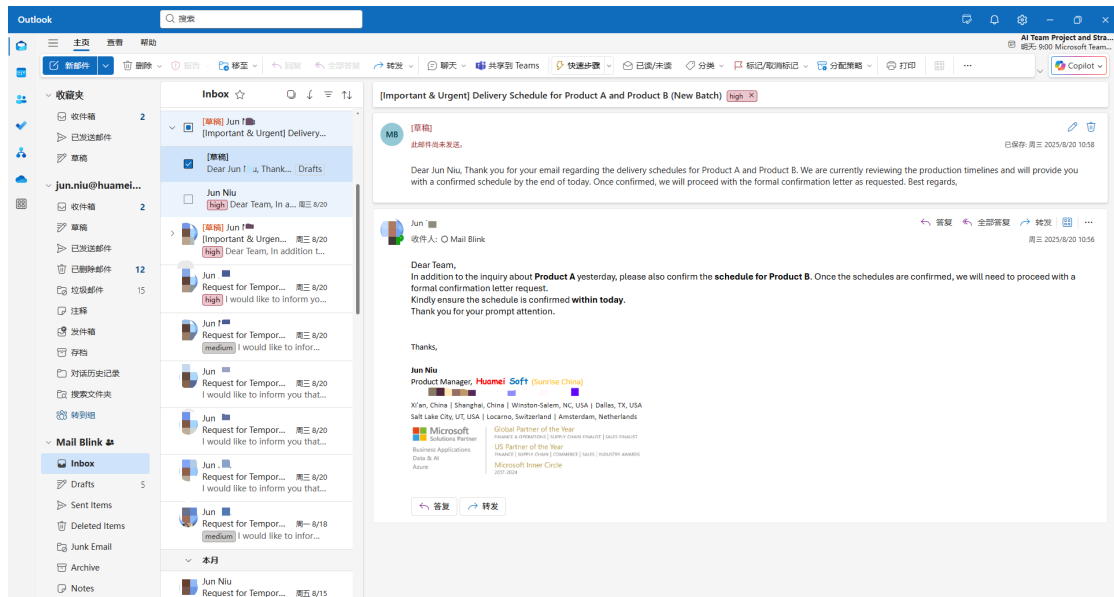

Key Features

1. Intelligent Recognition & Analysis

Supports automated parsing of multilingual emails and attachments—including invoices, orders, contracts, and billing documents. AI automatically classifies, prioritizes, tags, and identifies business intents, helping users quickly focus on the most critical information.

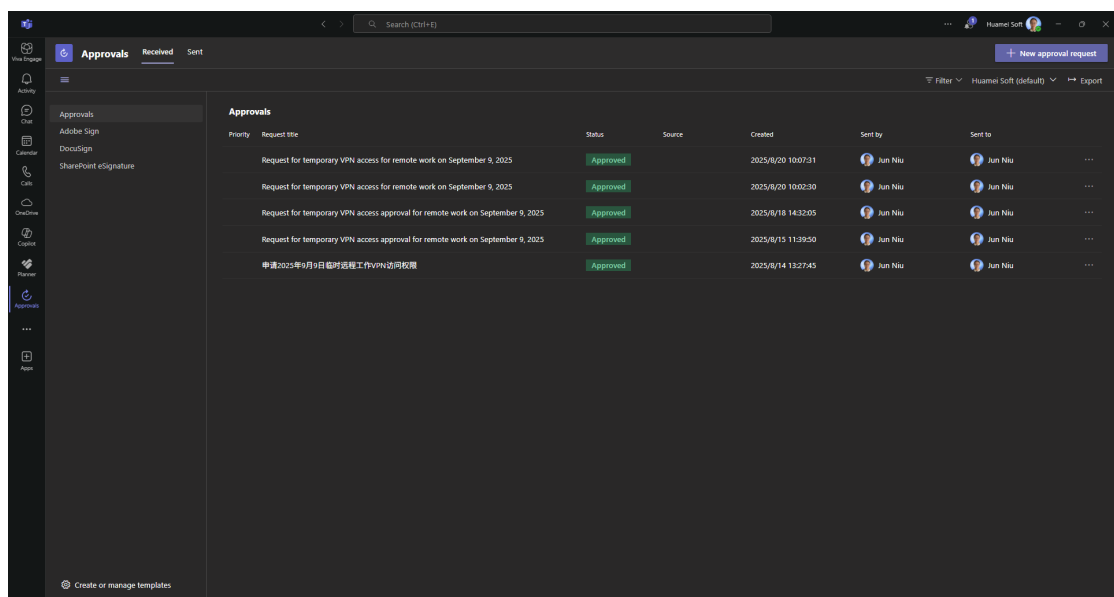

2. Automatic Summarization & Smart Reply

Instantly generates concise summaries and high-quality draft replies, enabling efficient handling directly within the inbox. Supports customized auto-responses based on enterprise knowledge and rules, improving both speed and consistency.

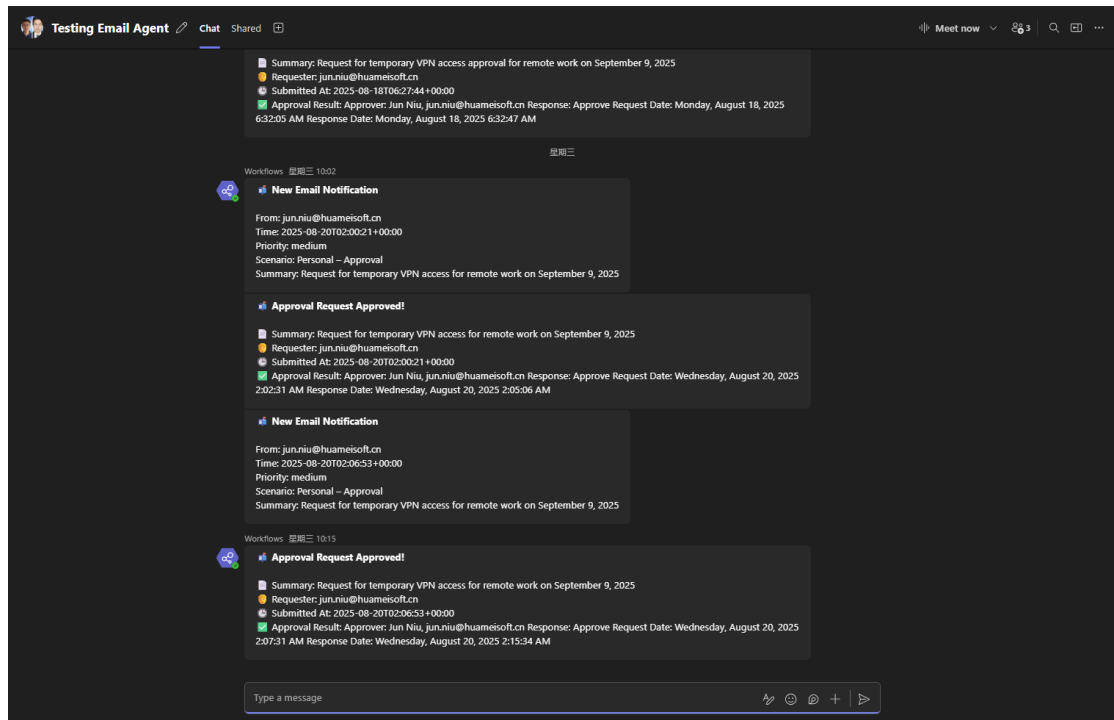

3. Collaborative Reminders & Workflow Integration

Synchronizes email content and analysis results with enterprise collaboration platforms (e.g., Microsoft Teams). Automatically creates reminders and visual dashboards. Tasks are routed into Planner, while approval emails are pushed directly into approval workflows—achieving natural integration and one-click processing.

4. Progress Tracking & Analytics

Provides end-to-end tracking and retrospective reporting. Generates progress dashboards by day, week, or project, with built-in alert mechanisms to prevent oversights. Visual analytics empower teams and managers to fully monitor execution status.

5. Enterprise-Grade Integration & Scalability

Deeply embedded in Dynamics 365, seamlessly connecting with CRM/ERP and third-party systems. Supports custom business scenarios and rule configurations while ensuring security and compliance—delivering efficient, frictionless cross-system collaboration.
