

What is Tailor Platform?

Tailor Platform is a backend platform that enables developers to create tailor-made Headless ERP Apps. Developers are able to create custom data models and business logic, and expose them as a GraphQL API, all without writing many lines of codes.

Here's a conceptual diagram of an Headless ERP App and how Tailor Platform fits in:

As you can see in the diagram: * Headless ERP Apps are generated from Configuration, with Tailor Platform parsing the Configuration * Tailor CLI (Command Line Interface) is used to generate and manage the Apps
