

Zoom brings together remote and in-person teams for work that goes wherever you do.

DataParser is connector software to bring Zoom data into any archive or eDiscovery system in use.

Zoom DataParser helps you use the technology you want while still meeting your compliance and security policy requirements.

KEY DIFFERENTIATORS

- Threads messages to replicate appearance in Zoom for easy viewing.
- Collects Channel Messages, Chat Messages, and External Users.
- Collects message edits and deletes.
- Collects Meeting and Webinar Participant Lists, Details, Chats, and more.
- Integrates with AD for easy user management.
- Supports multiple configurations.

How does it work?

DataParser pulls Zoom users' data directly from the Zoom API. The individual chats are threaded into conversations and formatted into an email. Any shared files are attached to the email. All appropriate compliance metadata and user information are included. DataParser then delivers the processed messages to your specified location. All major archiving, eDiscovery and Supervision technologies are supported. There is no need to add another repository or new review procedure.

DataParser is configured to automatically process data on a daily schedule. All new data is collected on each day's process. DataParser can also be used for specific legal matters or eDiscovery requests with the ability to create custom collection criteria for one-off runs.

The 17a-4 Testing team is your feedback resource through POC/trials and manages any feature requests. 17a-4 Support installs and configures DataParser according to your use case and deployment choice.

COMMON QUESTIONS

- **How do I set up a free trial?**
 - Request a free trial from sales@17a-4.com. The [Zoom DataParser Requirements](#) must be in place and the output destination credentials must be provided to 17a-4 Support.
- **Can we collect only specific Zoom users?**
 - Yes, DataParser fully integrates with your Active Directory for easy user management.
- **How does the Zoom data get into my archive?**
 - DataParser can send Zoom data to your archive via SMTP, through a mailbox or to a file location for pickup.
- **How do we know if there is an issue?**
 - Summary reports are generated with each run. If you see errors in the report or are not seeing the data in the archive, our Support Team will review.
- **How much is a license to collect 50 users of Zoom?**
 - Annual licenses for 50 users are \$1,900.

On-premise or Cloud: Which deployment is right for you?

DataParser Server is an on-premise solution for clients with strict security and compliance policies. Benefits include the ability to monitor daily processing and create one-off and custom collections.

[On-prem Server Requirements](#)

DataParser Cloud is for clients that don't want to manage servers but need to get data into an archive. 17a-4 Support handles daily monitoring and upgrades. Benefits include quick deployments and no administration.
