

Intune Syncing to Atlassian Assets

Our application is designed to provide our users with a reliable service. Simply connect your client credentials, map your fields, and start syncing effortlessly.

Discover all our amazing features in more detail below.

Syncing

We offer to sync your devices up to every 30 minutes, ensuring your data is always up to date. Say goodbye to long sync intervals like some of our competitors.

Filtering

We believe in giving you maximum control. That's why we've built in custom filtering, allowing you to sync only the devices you want.

Device Ownership

When syncing your devices, we check the device owner within Azure. With this information, you can easily map a device owner in Assets, enabling automatic association of hardware tickets to the device.

Device Attributes

When syncing your device, you have the flexibility to select any field available within Entra to be synced to Atlassian.

Uptime

Our product is completely free of physical dependencies. All our services are hosted on the Cloud with all of our providers having no less than 99.9% uptime.
