3-it experts are offering a 3-day Azure Hybrid Cloud kickstart workshop with Proof of Concept

Hybrid cloud and managed services

3-it is one of the leading partners in Belgium for consulting on Azure hybrid, multicloud solutions and managed services. Our goal is to help our customers on their journey to their hybrid and multicloud setup with Azure Stack Hybrid Cloud Integration and Azure Arc.

What we offer

This workshop is intended for customers who want to gain central visibility, operations and compliance in a hybrid or multi-cloud environment. During the workshop we focus on the two Microsoft products designed for Hybrid environments : Azure Stack HCI and Azure Arc.

Azure Stack HCI is a hyperconverged infrastructure host from Microsoft delivered as an Azure hybrid service. Run Windows and Linux virtual machines on-premises on a host platform that is IT-friendly and is managed by you with existing tools, processes and skillsets.

Azure Arc offers simplified management, faster app development and consistent Azure services. Easily organise, govern and secure Windows and Linux servers, SQL Server and Kubernetes clusters across data centres, the edge and multi-cloud environments in Azure and on premises.

The workshop covers a platform overview allowing the customer to experience the single pane of glass on their own environment.

Agenda

- Day 1: Platform Overview and Proof of Concept environment pre-configuration
- Day 2: Connectivity to your network and Integrations with existing systems
- Day 3: Migration from existing workloads, management through Azure Arc
