# airia

Enterprise **AI Platform**

Securely build, deploy, and manage enterprise AI at scale

Transform the way your organization leverages AI with the Airia Enterprise AI Platform. Designed to accelerate adoption and streamline operations, our platform enables you to build, deploy, and manage AI-powered agents and solutions securely and at scale. Empower your teams with the tools to unlock AI's full potential, delivering measurable impact across your business.

- AI Observability
- Cost Optimization
- Intelligent Routing
- Model Guardrails
- Security & Governance

- Assistants & Agents
- Orchestration
- Prototype & Testing
- Developer Studio
- Prompt Management

Seamless Data Integration and Connectivity

Effortlessly connect your AI agents to existing data sources, applications, and workflows, enabling real-time access to enterprise knowledge and improving AI performance throughout your organization.

Enterprise Security and Responsible AI

Protect your AI ecosystem with strong security, DLP capabilities, and responsible AI controls, ensuring compliance, safeguarding sensitive data, and producing safe outputs across all workflows.

Flexible Deployment Options: Cloud, On-Premise, Hybrid

Deploy in the cloud, on-premises, or through a hybrid approach, ensuring seamless integration with your current infrastructure while addressing your specific security and compliance needs.

Key Platform Capabilities

AI Workflow Orchestration

Empower your organization with purpose-built AI agents that automate complex tasks and seamlessly integrate with existing systems. Our user-friendly tools allow you to easily design, secure, deploy, and manage custom agents, streamlining AI implementation across your entire organization.

500+ Pre-Built Agents & Assistants

Leverage an extensive library of over 500 pre-built AI agents, organized by industry, department, and use case, to rapidly scale your workforce. Tailor these agents with curated system prompts and integrate them with leading LLMs or domain-specific models to meet your requirements.

Build, Test & Deploy Custom Agents

Our no-code builder enables you to design custom agent workflows by effortlessly integrating models, data, apps, and actions. Establish strong security and governance controls from the beginning, then rigorously test your agent's performance under various conditions and models, allowing for rapid iterations and optimizations for both performance and cost-effectiveness.

Native App & System Integrations

Seamlessly connect your AI agents to existing third-party data sources, company repositories, and enterprise applications, equipping them with real-time, integrated data for improved accuracy and relevance. Our platform enables secure and seamless integration, keeping your AI-driven initiatives continuously informed by the latest information across your entire ecosystem.

Security Controls & Observability

Safeguard your AI ecosystem with end-to-end security measures, including data leakage protection, prompt injection detection, and robust model lifecycle management that includes model access and usage controls. Achieve complete visibility into your AI deployments through advanced observability tools, featuring detailed audit logs and interaction tracking, ensuring compliance and maintaining operational integrity.

Responsible AI Guardrails

Establish robust safeguards for ethical AI usage, which include real-time detection and management of bias, toxicity, and inappropriate content, while reducing hallucinations by verifying source material. Ensure effective AI governance through a centralized model inventory and comprehensive lifecycle management, allowing total visibility and control over your AI deployments.

Cost Optimization & Chargeback

Optimize AI expenses through centralized usage management, intelligent request routing, and configurable usage policies. Gain insights into token costs, data ingestion expenses, and performance impacts. Our integrated billing platform supports chargeback functionality, facilitating the distribution of AI cost to different departments, which promotes accurate attribution and responsible resource utilization.

About Airia

Airia revolutionizes enterprise AI adoption with our innovative platform, integrating advanced models and data sources to streamline workflows into AI-powered agents and assistants. Our platform ensures robust security and responsible AI controls, while offering unparalleled deployment flexibility. From rapid development of custom agents to effortless AI lifecycle management, Airia empowers organizations to confidently scale AI applications for any business need.
