

The AI Platform Transforming Healthcare

Securely build, deploy, and manage healthcare AI at scale

Transform patient care and clinical operations with the Airia AI Platform for Healthcare. Designed to accelerate adoption and streamline operations, our platform enables you to build, deploy, and manage AI-powered solutions that meet strict compliance requirements while scaling across your healthcare system. Empower your clinical and administrative teams with tools to unlock AI's full potential, delivering measurable improvements in patient outcomes, operational efficiency, and quality of care.

-  Boost medical staff productivity with AI assistants
-  Reduce operational costs and improve efficiencies
-  Improve documentation workflows with AI automation
-  Enhance patient care with personalized engagement
-  Secure sensitive data with robust compliance policies

Transform Healthcare Workflows with Purpose-Built AI Assistants

Clinical Excellence & Care Delivery

- Record summarization
- Automated coding assistant
- Consent management
- Data entry assistant

Enhanced Patient Engagement

- Appointment scheduling
- Procedure preparation
- Patient education assistants
- Medication management

Streamline Administrative Tasks

- Billing & payment assistants
- Transcription verification
- Prescription refill manager
- Case management

Key Platform Capabilities

AI Assistants & Agents

Leverage an extensive library of over 500 pre-built AI agents, including specialized healthcare assistants designed for clinical, administrative, and operational workflows. From patient engagement to clinical documentation, these HIPAA-compliant agents can be customized with medical knowledge bases and integrated with healthcare-specific LLMs to meet your organization's needs and compliance requirements.

Prototype, Test & Deploy

Our no-code builder enables healthcare organizations to design custom clinical and administrative workflows by effortlessly integrating EHR systems, medical imaging platforms, and healthcare databases. From the start, establish HIPAA-compliant security protocols and clinical governance controls, then thoroughly validate your agent's performance under various scenarios and use cases. This allows for rapid iterations and optimizations while maintaining patient safety standards and optimizing clinical accuracy and cost-effectiveness.

Patient Data Integrations

Seamlessly connect your AI agents to authorized healthcare data sources, clinical repositories, and enterprise healthcare systems, equipping them with real-time, integrated data for enhanced clinical accuracy and contextual relevance. Our platform enables secure and seamless integration while maintaining strict data privacy standards, ensuring your AI-driven healthcare initiatives remain continuously informed by the latest patient and clinical information across your health ecosystem.

Security & Compliance Controls

Safeguard your healthcare AI ecosystem with comprehensive HIPAA-compliant security measures, including PHI protection, prompt injection detection, and robust model governance that adheres to clinical safety protocols and regulatory requirements. Maintain complete visibility into your AI deployments through advanced observability tools, featuring detailed audit logs and interaction tracking, ensuring regulatory compliance and the highest standards of patient data protection.

Responsible AI Guardrails

Establish robust safeguards for ethical healthcare AI usage, including real-time detection and management of bias, toxicity, and inappropriate content, while reducing AI hallucinations by verifying source material. Ensure effective AI governance through a centralized model inventory and comprehensive lifecycle management, allowing total visibility and control over your AI deployments.

Cost Optimization & Chargeback

Optimize healthcare AI expenses through centralized usage management, intelligent request routing, and configurable department-specific policies. Gain insights into token costs, data ingestion expenses, and performance impacts. Our integrated billing platform supports healthcare-specific cost allocation, enabling the distribution of AI expenses across clinical departments, service lines, and administrative units.

About Airia

Airia revolutionizes healthcare AI adoption with our innovative platform, integrating advanced clinical models and data sources to transform medical and administrative workflows into HIPAA-compliant AI-powered assistants. Our platform ensures strict regulatory compliance and patient data protection, while offering the flexibility healthcare organizations need. From developing custom clinical assistants to managing AI solutions across health systems, Airia empowers healthcare organizations to confidently scale AI applications that enhance patient care, improve operational efficiency, and advance clinical outcomes.
