

THE WORLD'S FIRST REAL-TIME EMAIL AUTHENTICATION SOFTWARE

DMARC Enforcement in less than 30 days

A decorative graphic consisting of numerous thin, parallel blue lines that flow and curve across the right and bottom portions of the page, creating a sense of motion and connectivity.

THE PROBLEM

Exact Domain Impersonation

Today, 91% of all cyber attacks begin with a phishing email. As cybercriminals are advancing, the use of exact domain impersonation or domain spoofing is allowing them to utilize an organization's exact domain to retrieve sensitive information without the need for any malware, suspicious links, or infected attachments. As a result, victims suffer from severe financial loss, identity theft, and reputational damage.

Advanced email authentication is necessary to tackle this threat. By configuring all email authentication protocols (SPF, DKIM, DMARC, MTA-STS, TLS-RPT), organizations are able to secure their domain, email, brand, and above all, their people. As such, a strict DMARC policy of p=reject is critical.

KEY FIGURES

4.75x

Likelihood to be targets of spoofing if DMARC is not enforced

3 Billion

daily messages spoof sender identities in "From" fields.

1.28 Million

domain owners worldwide use DMARC.

14%

of DMARC domains are protected by enforcement policies.

LIMITATIONS OF MANUAL PROCESSING

Most organizations are manually deploying email authentication. Challenges include:

Endless hours & resources

Forgetting about subdomains

Misconfiguring SPF records

Human errors

Mismanaging DKIM keys

SKYSNAG PROTECT

Real-time Email Authentication

Skysnag’s premium automation tools eliminate the hassle of manual report reading and tedious configuration tasks. It identifies and prevents misuse of corporate emails—stopping phishing, impersonation and brand cloning attacks. Organizations gain full domain protection and visibility for their greatest asset and security risk—their people.

Protect your domain from phishing and blacklisting beyond DMARC reports

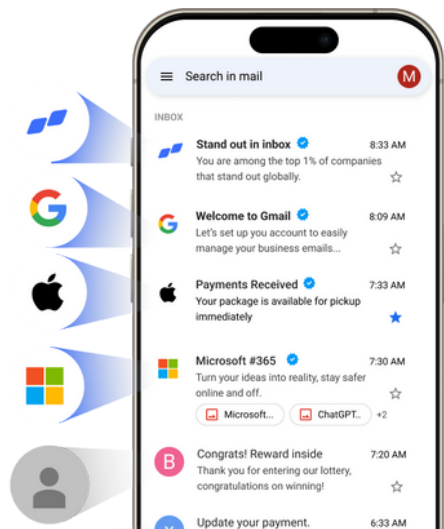

- Automated Whitelisting of Authorized Senders**: Shows DMARC, SPF, and DKIM all at 100% compliance.
- Unlimited SPF Lookups**: Shows SPF records for IP addresses 421.4.7.26, 421.4.7.27, and 421.4.7...
- Guaranteed DMARC Enforcement Within 30 Days**: Shows P=REJECT with options for none, quarantine, and reject.
- Enhanced Email Deliverability**: Shows a 'Delivered' status at 100% with various email provider icons.

Put DMARC on autopilot with Genius DMARC enforcement

- 7x** Faster than traditional DMARC vendors
- Zero Risk** 0% risk of SPF/DKIM errors or breaks
- 100%** Visibility on suspicious sending activity
- +30%** Increase email deliverability

Trusted by organizations across the globe.

Powerful Email Security Features

Genius DMARC Enforcement

- Take control of your domain's security against email spoofing and phishing.
- Configure DMARC settings and set up necessary DNS records with ease.

Sender Detection

- Accurately detect sending services without guesswork.
- Exact pinpointing of sending failures, with precise identification of sending services.

Fastest Path to Activating BIMI

- Pre-requisite to BIMI activation is DMARC enforcement.
- Skysnag Protect enables DMARC enforcement in less than 30 days, ensuring the fastest route to BIMI implementation.

Genius SPF

- Our technology uses real-time authentication to enrich data like never before.
- Zero risk of blocking legitimate emails, avoiding the average loss of 10-15% of valid emails due to DMARC enforcement.

Domain Guard

- Monitor and secure against blacklisting.
- Our technology supports all globally adopted blacklists (500+) and is built to initiate automated takedowns to proactively prevent blacklisting across your domains.

MTA-STS and TLS-RPT Enforcement

- Guard against threats such as eavesdropping and man-in-the-middle attacks.
- Detect and prevent replay attacks and spoofing attempts effectively.
