

# ARCHITECTURAL DESIGN SESSION

Get bespoke technical guidance for a one-off fee

## How does it work?

It's a one day workshop, at your offices or ours. We can do it on Teams, but we always prefer in person... the stuff around the whiteboard is where the magic happens!

### Before the workshop

We'll need a good chat with you beforehand, to find out who'll attend, qualify the project and objectives, and review your current environment. All to maximise productivity of the day.

### On the day

One of our Senior Solution Architects will run the workshop. This is the deep dive into your problem. Requirements are gathered, your vision and challenges listened to and understood. We'll create

potential solutions and give you a feel for what a great design looks like.

### After the workshop

The report and recommendations will be written up for you. You're now set up to progress to a Proof of Concept or go straight to Design and Build. Or you can simply press pause and digest what you've learnt.

### Why would I need this?

Maybe we've been recommended or referred, but you've not heard of us. That's probably because we're a boutique consultancy and really quite specialist. Tricky Azure integrations are one of our sweetest spots. This is a low risk way to kick-start a project and try us out!

## How much does it cost?

A fixed cost of £2,500 (plus VAT). We refund this if you're not 100% satisfied - or if you proceed to the Build stage, this cost is fully discounted. It's a win-win!

## I'm interested - what next?

Just email [danny.hayter@345.technology](mailto:danny.hayter@345.technology) or [richard.smith@345.technology](mailto:richard.smith@345.technology) and they'll get in touch to set up a mutually convenient time for a chat. We look forward to hearing from you!
