# Beey automatically converts speech to text

The Beey application from Newton Technologies automatically transcribes audio and video files to text. The online app offers a full set of tools for efficient editing of automatic speech-to-text transcripts.

Fast and precise

Beey uses Deep Neural Networks for highly accurate transcription in real time. Beey converts your recordings to text in up to 20 languages and also supports speaker detection, subtitle creation and machine translation.

Key features

Beey automatically transcribes speech to text, but you can use it for so much more.

Automatic transcription

Beey converts audio and video files to text. Your videos, podcasts, recordings from meetings and online calls, interviews, recorded lectures or files from the internet are automatically transcribed to text in Beey.

Transcription proofreading

Beey provides easy and efficient text editing and formatting. Fast automatic transcription is never 100% accurate but you can quickly and conveniently correct it with the Beey editor.

Captions and subtitles

Beey automatically captions your video. With Beey, you can have your captions/subtitles ready within minutes. Simply transcribe your video file, correct any mistakes, and export it in one of the supported subtitle formats (SRT, VTT, SSA, STL, TTML).

Sharing and export

Beey allows sharing and team cooperation. Within seconds, your transcribed projects can be shared with other users, tagged and sorted, or annotated. Beey offers many export options, and you can always copy the formatted text.

Automatic translation

All transcribed projects and subtitles made in Beey can be translated in a few clicks. Through our integrated Beey Translate app, a new project is created in one of 20 available languages. All the original project's timestamps are preserved, which allows for easy playback, comparison of original sound to the translation, and quickly generated automatic subtitles.

Professional subtitle mode

Beey provides a state-of-the-art tool for creating edited subtitles on a professional level. Using our interactive waveform preview with all the subtitle segments, you can just drag and drop each section for the best timing accuracy. Subtitles made in Beey by professional editors are used for national level TV channels, such as TV Nova, CNN Prima News, DVTV, and others.

The complete workflow

Beey offers a unique system for spoken word monitoring (TV shows, videos, podcasts, radio or online broadcasts) using automatic transcription, including the optional text redaction, recording and text synchronization, and archiving. All customized modules, including workflow, are available as a bundle or for individual implementation into the client's software.

Beey Publish

You can publish your verbatim transcription synchronized with the video via our open-source website plug-in Beey Publish. It can serve as a searchable archive and a tool for highlighting specific keywords or speakers.

Manual proofreading

Don't waste time checking and editing the automatically transcribed text. Entrust this work to our professional editors.

The service is available directly in the **Beey** application. Just send your automatic transcript to our editors and **Studio Beey** will take care of everything else.

Who benefits from using Beey?

- ✓ Media monitoring agencies
- ✓ Media
- ✓ Podcasters
- ✓ Journalists
- ✓ Video producers
- ✓ State administration
- ✓ Local governments
- ✓ Courts
- ✓ Researchers
- ✓ Schools and students

Beey feature overview

Basic functions & Integration

- In-app payment gateway
- Self-service user account creation
- Cloud technology
- On-premise technology
- API
- Multiple file upload
- Batch file transcription
- Mobile version support

Editor

- Support for 20 languages
- Advanced transcript editor
- Smart playback functions
- Playback paused while editing (optional)
- Caret delay settings
- Editing an on-going transcription
- Automatic time alignment
- Comments and tags
- User dictionary
- Automatic recalculation of timestamps
- Automatic speaker change detection
- Manual speaker editing
- Manual speaker assignment
- Automatic speaker identification
- Section tags

Smart translation

- Machine translation in 20 languages
- Automatic translation of subtitles
- Preserving original and translated projects

Captions/Subtitles

- Editing in subtitle mode
- Subtitle length/speed warnings
- Interactive sound wave
- Inserting subtitles into video
- Customizing subtitle color by speaker
- Smart split subtitles

Collaborative functions

- Project sharing
- Shared credit within a team
- Shared user lexicon
- Shared speaker database

Extensions (Beey Apps)

- Audio/video transcription from URL
- Transcription of audio/video stream
- Transcription of DSS/DS2 format
- Merging multiple audio channels into one transcript
- Splitter for long recordings
- Beey Publish plugin
- Transcription of direct voice

Export

- Export to text files (docx, pdf)
- Export subtitles (srt, vtt, ssa, stl, ttml)
- Media download
- Export to XML

Customer and technical support

- E-mail support
- Phone support
- Training for users
- Personal consultant
- Individual dictionary updates
- Linguistic consultation
- Individual account manager

Supported languages

- English
- Bosnian
- Bulgarian
- Montenegrin
- Czech
- Croatian
- Italian
- Hungarian
- Macedonian
- German
- Norwegian
- Polish
- Romanian
- Russian
- Slovak
- Slovenian
- Spanish
- Serbian
- Swedish
- Ukrainian
