

Azure Data & Analytics Platform Solution

Does your organization produce a wealth of data? Are you worried your data isn't being leveraged as well as it could be? Could your decision-making processes be more data driven?

3Cloud can help get you started on an organized, cohesive, and highly functional data environment with our Azure Data & Analytics Platform (ADAP).

ADAP is an industry leading architecture and a working solution that enables users to extract business value out of secure and governed data. In today's era of big data, ADAP can help accelerate modernization, drive innovative insights, and enable centralization of data by taking advantage of Azure services in a modern data and analytics platform.

Better Decisions through Data.

Achieve Insight Acceleration

ADAP empowers you with self-sufficient and continuous data syncing, ensuring a constant supply of fresh analytics at your disposal to make the hard decisions easier.

Unite and Unify Your Data

Not all platforms can maneuver data to and from different systems seamlessly. Azure facilitates extracting, transforming, and easily onboarding data from disparate systems, so that it can be analyzed and visualized in one place. ADAP also empowers users to compile and analyze unstructured data.

Scale Rapidly

With Azure, applications can scale up or down quickly, without risk of downtime or reduced performance.

ADAP overview

With 3Cloud's ADAP solution, you will be able to take advantage of an accelerated platform deployment in Azure that ensures security, quality, embedded industry leading practices, and reduction in the time to market for innovation.

An **Azure Data & Analytics Platform engagement** can range from 4-8 weeks and is designed to create a modern and highly capable environment. 3Cloud implements a framework for the consumption, storage, and aggregation of your data with industry-leading architecture and data design patterns.

Engagement outline:

- Kick-off and Mobilization
- Business Use Case Envisioning and Sculpting
- Architecture Design Session (ADS)
- Build and Deployment
- Engagement Showcase and Readout

ADAP provides the foundation for:

- Data Warehousing & Modernization
- Machine Learning & IoT Platform
- Data Science & AI
- Business Intelligence & Power BI
- Data Estate Migration

If you're ready to harness the power of your data with accelerated insights in a secure, well-governed platform, we can get you there.
