

4n6 Spyder Software

Robust and efficient solution to search entire website for a word easily

We all know how hassling it can be to look for a specific keyword or phrase in a website. Websites often contain hundreds and thousands of words, so finding any particular keyword can be difficult. The Website Search Tool is an effective solution that allows you to efficiently search keywords in the entire website and provides you with the desired results.

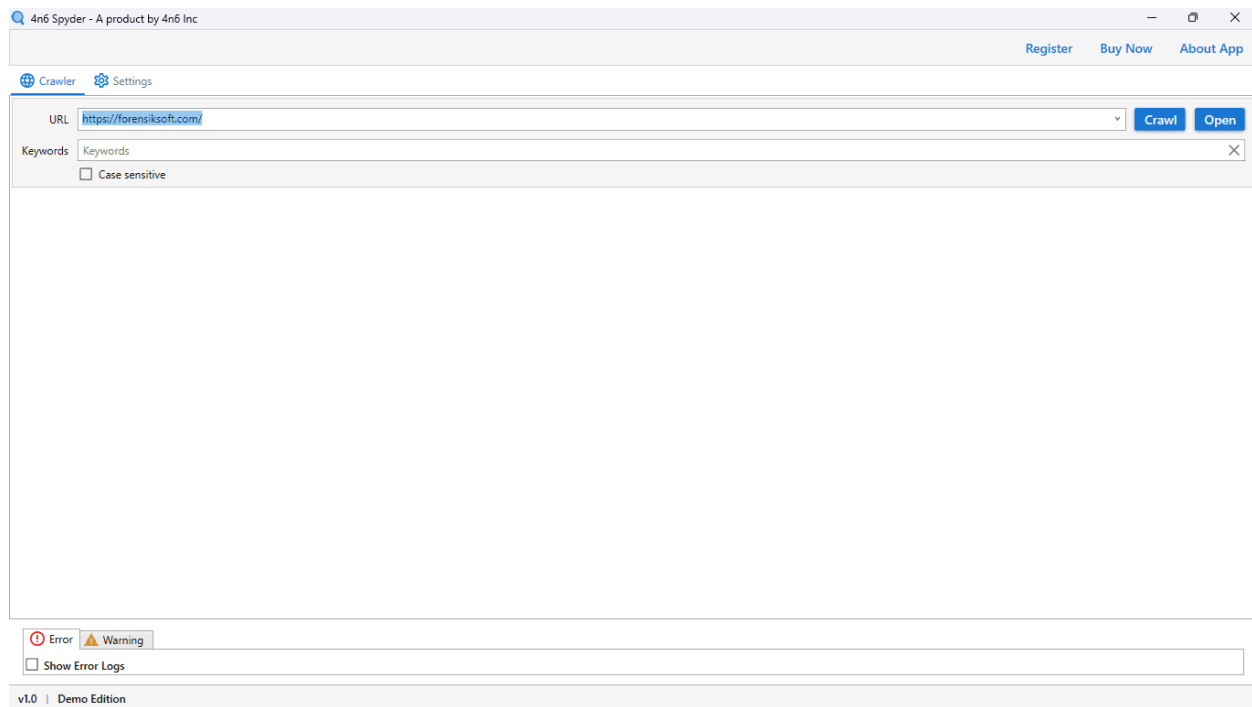

Visit the official page: [4n6 Website Search Tool](#)

Step 1: Download and run the website search tool.

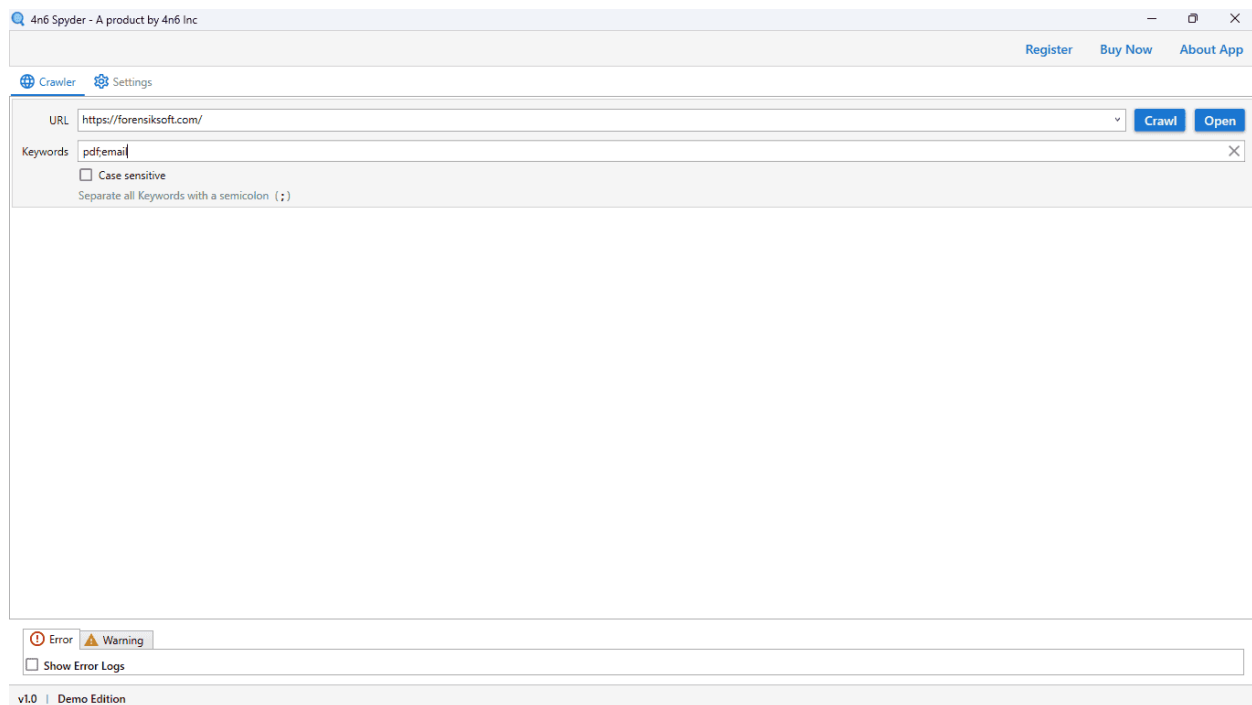

The screenshot displays the 4n6 Spyder software interface. The title bar reads "4n6 Spyder - A product by 4n6 Inc". The interface has a top navigation bar with "Register", "Buy Now", and "About App" links. Below this is a tabbed interface with "Crawler" and "Settings" tabs. The "Crawler" tab is active, showing a "URL" input field with a dropdown arrow, a "Keywords" input field with a dropdown arrow, and a "Case sensitive" checkbox. There are "Crawl" and "Open" buttons next to the "URL" field. At the bottom, there is a status bar with "v1.0 | Demo Edition" and a "Show Error Logs" checkbox.

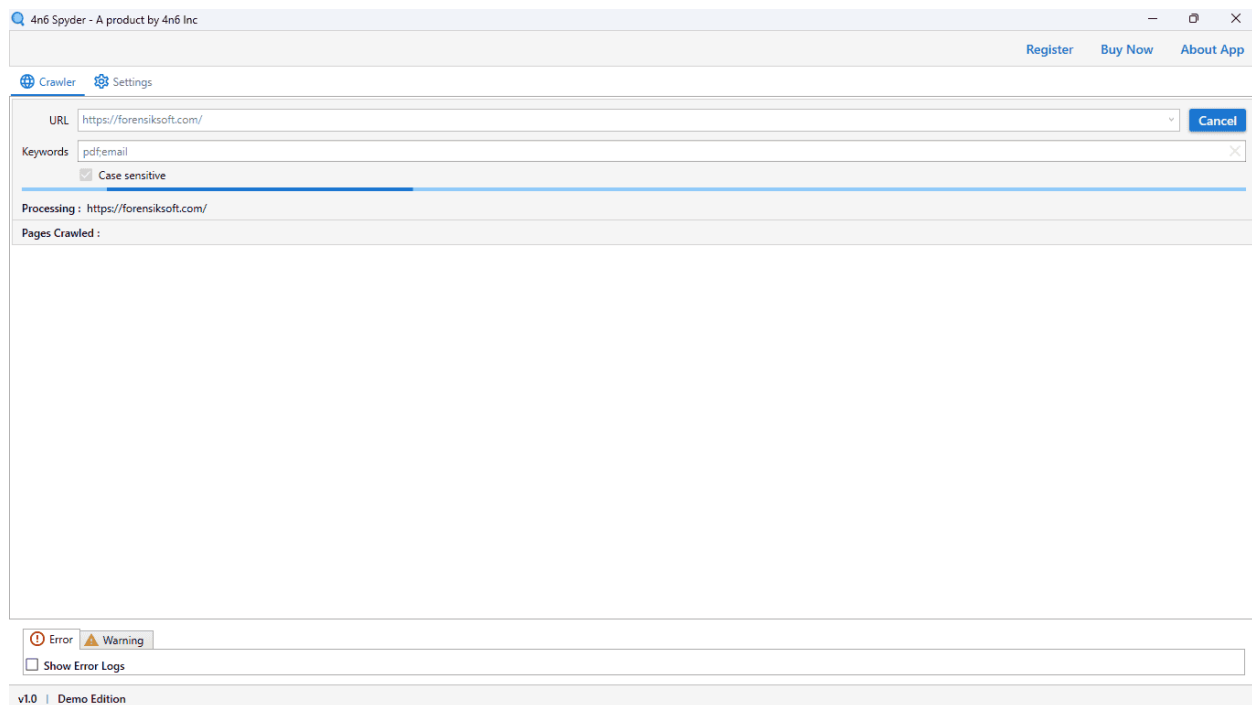

Step 2: In the Crawler bar, enter the website URL that you want to scan.

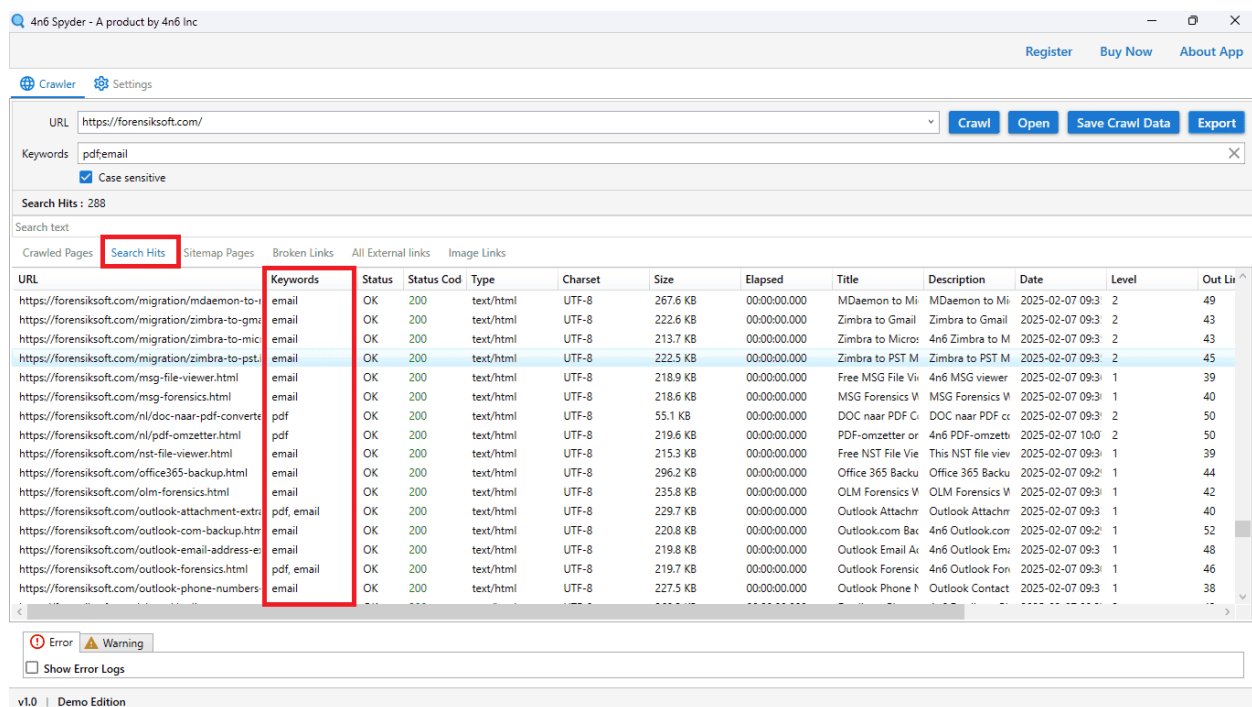

Step 3: Next, in the keywords tab, **add the desired keywords** and separate them using semicolons (;).

Step 4: Now, click on the **crawl button** to initiate the keyword search process.

Step 5: After that, you will be provided with the **resultant keywords and phrases**.

With the help of these steps, you can easily search for any specific keyword or phrase from an entire website. This solution is an advanced utility to seamlessly scan multiple pages of the website at once and efficiently perform the keyword search. Along with numerous beneficial features of this tool, it also allows you to export the images from the provided image links on the website.

Conclusion

When the user needs to find a specific word on a website that contains multiple pages, it becomes quite impossible for them to proceed with the task. This is where the suggested solution comes into action. With the help of this solution, you can carry out seamless phrase or keyword searches without much of a hassle.
