

Workshop: Simplify and Optimize Data Management with Fabric

Description and Value Proposition

Join our exclusive workshop where we will explore Fabric, an advanced platform that centralizes and optimizes enterprise data management. During this session, you will discover how OneLake, OneCopy, and Shortcuts can transform the way your organization handles and analyzes data. Fabric streamlines information consolidation, enhances team collaboration, and reduces duplication of efforts, all while maintaining high security standards

Learn how to simplify data management processes, reducing management time and improving productivity.

Learn how to use OneLake to unify data access, promoting efficient collaboration among globally distributed teams.

Understand Fabric's security mechanisms that protect your data at all times, with robust encryption and access control.

Workshop Content

OneLake

Explore how OneLake centralizes all your organization's data on a single platform, eliminating silos and facilitating collaborative management.

OneCopy

Discover how OneCopy reduces data duplication, allowing you to reuse information across environments without compromising consistency.

Shortcuts

Learn about the Shortcuts feature, which provides instant access to data without replication, saving space and improving operational efficiency.

Live Demo

The session includes a live demo, where you'll see how Fabric works in real-time:

- How to centralize and manage data with OneLake.
- How to avoid duplication with OneCopy.
- How Shortcuts optimize access to critical information.

We will also explore how Fabric ensures data protection through advanced security systems.

Duration:

2 hours

Formato:

Virtual

Target Audience:

IT administrators, data architects, business analysts, and decision-makers in data management.
