A new dimension to medical images

We're transforming how clinicians engage with medical images with
interactive, easily generated holograms

Enhancing surgical planning with holographic technology

Surgeons can now experience a clear 3D view of patient anatomy with our **CE approved platform**

Initially for pre-operative planning, ultimately for intraoperative assistance.

The patient is in 3D, the images should be as well

We're moving beyond the flat screen to provide clinicians a spatial visualisation not possible before now

The HoloCare platform

How our service seamlessly transforms medical images into interactive 3D holograms.

Approved for Liver, built to expand
