

Microsoft 365 3-Day Security Assessment

Cyberattacks are on the rise.
How secure is your M365 platform?

Our security assessment will validate the level of threat protection within your current M365 implementation and help you strengthen your M365 security posture.

Undertake a security assessment utilising the latest benchmark standards from the Centre for Internet Security (CIS) and Microsoft 365 Foundations.

Identify risks and vulnerabilities in your existing security policies and configuration.

Create a detailed report that clearly explains the findings of the assessment and provides you with an understanding of the current risk level and the potential implications.

Offer clear steps and recommendations underpinned by industry best practise, of how you to mitigate the risks identified, patch your vulnerabilities and strengthen your overall security across M365.

Help you reach the end goal of improving your security posture on the platform, to better protect your core business processes and critical data.

We're a leading Microsoft Gold Partner

We are amidst the highest accolade of Microsoft Partners, with 14 Gold and 4 Silver Competencies.

This demonstrates our expertise, knowledge and strength in the provision of Microsoft solutions.

Agenda

DAY 1

Detailed review of security policies mapped to the M365 platform.

DAY 2

Technical review of the security configuration within your M365 subscription.

DAY 3

Delivery of security assessment report and provision of best practice recommendations, at the profile level appropriate to your organisation.

Scope of the assessment:

- ✓ Account/Authentication
- ✓ Application Permissions
- ✓ Data management
- ✓ Email security/Exchange Online
- ✓ Auditing
- ✓ Storage
- ✓ Mobile Device Management

Cost: £2500

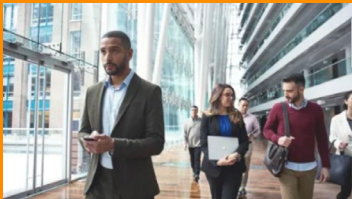

Out of Scope

- ✓ Detailed remediation plan
- ✓ Azure or M365 credit/licenses
- ✓ Remediation or troubleshooting of existing M365 issues

Streamline and strengthen your security

Manage business securely while working remotely

Cut through the complexity, empower security teams, and deliver friction-free user experiences.

Information Protection

Protect your sensitive data wherever it lives or travels.

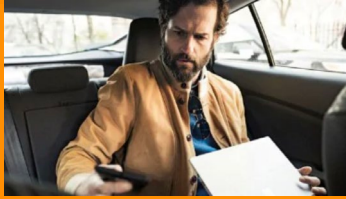

Threat Protection

Stop attacks with integrated and automated security.

Cloud Security

Safeguard your cross-cloud resources.

Identity and Access Management

Manage and secure identities on a universal platform

Intelligent Security

Built-in experiences across platforms

Provide a friction-free experience so everyone can work securely from anywhere, on any platform

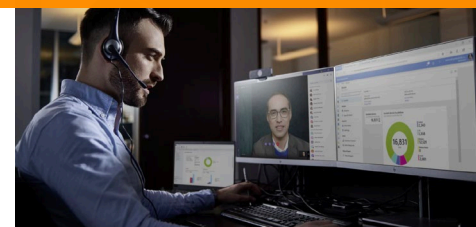

AI and automation to help secure your future

Empower your team against emergent cyberthreats with machine learning and automation.

Best in class and integrated

Our comprehensive suite of leading solutions is unified across people, devices, apps, and data.

Forrester found Microsoft security technology automatically remediates **97%** of endpoint attacks detected, freeing up teams to resolve the most complicated cases.
