

How to use - Kernel Document Converter Software

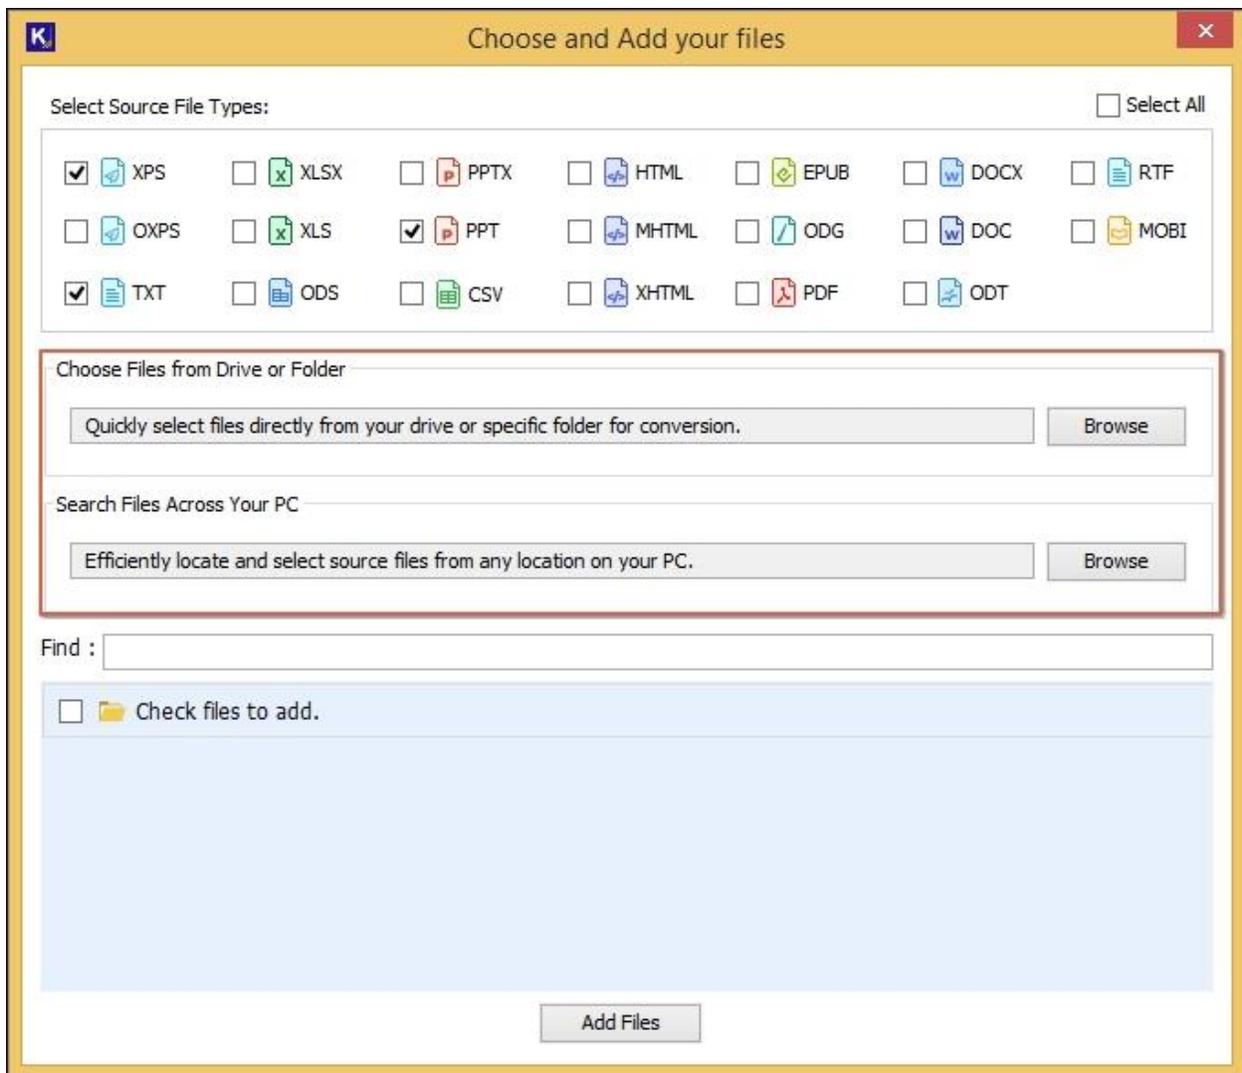

Step 1: Launch Kernel Document Converter and navigate to its home screen.

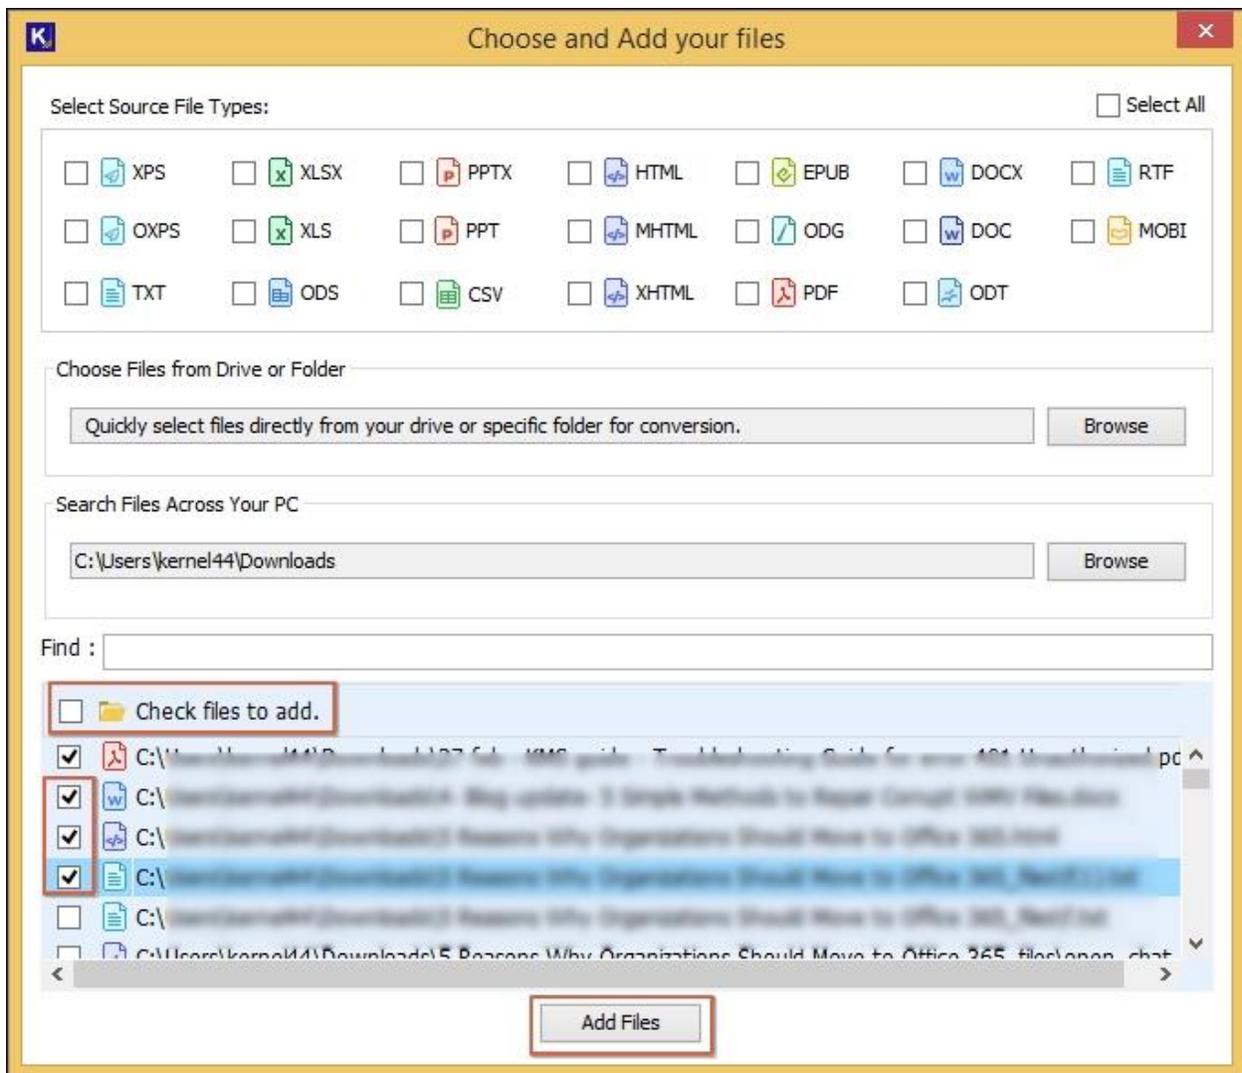

Step 2: Select single or multiple source file types. You can also select them all at once with the 'Select All' option.

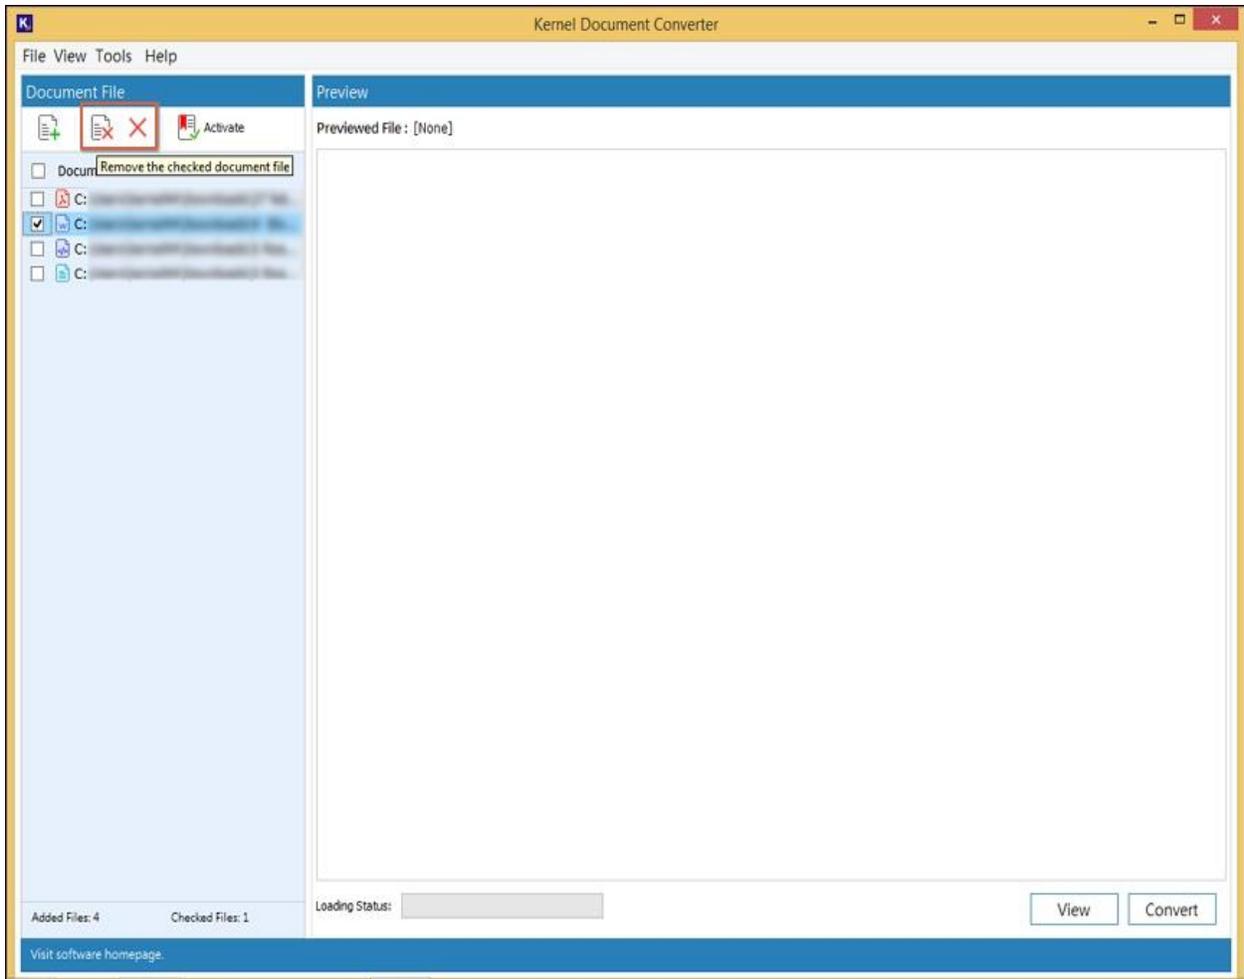

Step 3: Add the specific files from the folder or add complete folder for conversion.

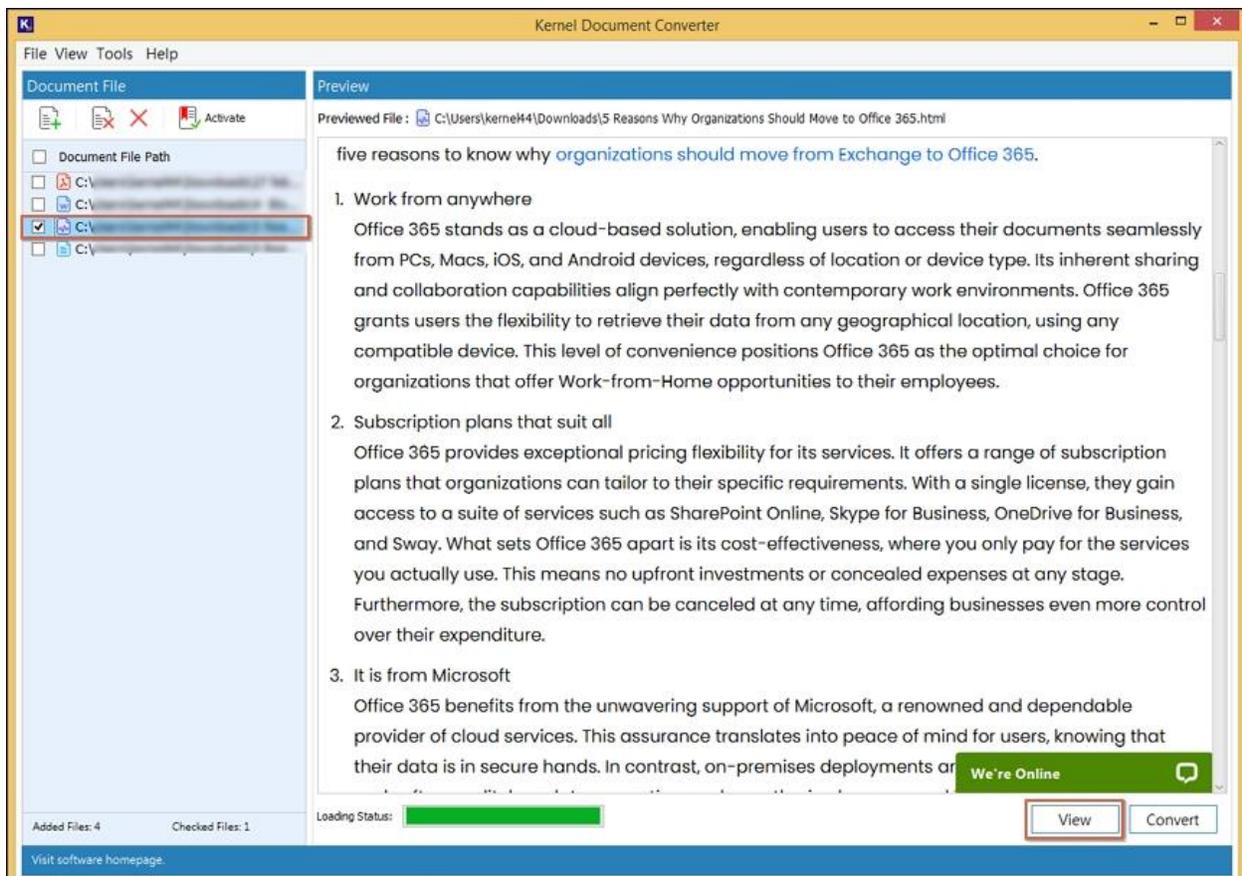

Step 4: Choose specific files from the list displayed on the tool or select all. Then, click on Add Files.

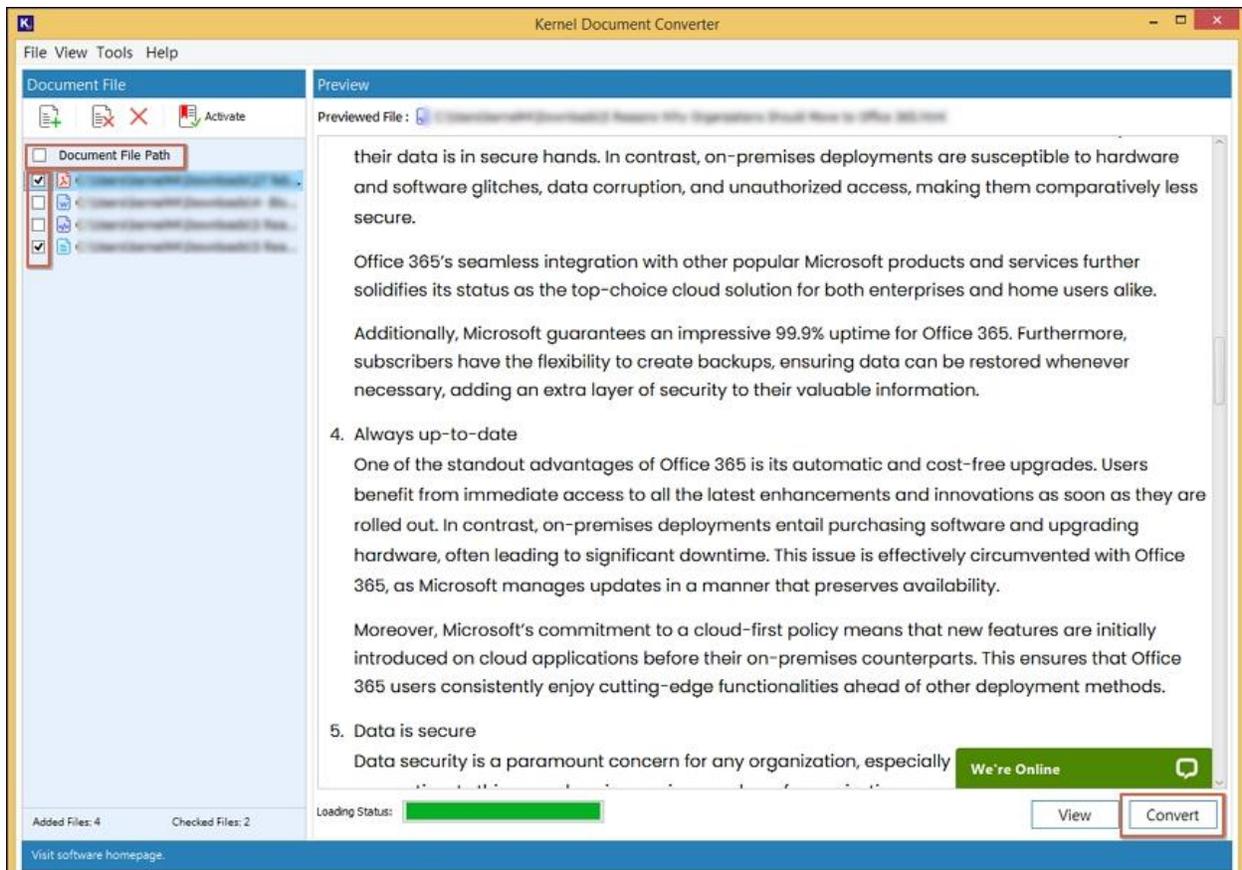

Step 5: Remove any file or remove all if you have added any obsolete file.

Step 6: From the added files, choose any file and click on the View option to preview file data.

Step 7: Select specific files or all documents to convert it to different formats.

Step 8: Configure your conversion, start with providing a location to save the file and choose preferred format to convert. Also, apply useful filters to convert specific files.
