# Microsoft Sentinel Workshop

## Explore Microsoft Sentinel and Uncover Threats in Your Environment

### Get a comprehensive overview of your enterprise with a modern SIEM solution

As technology plays an increasingly strategic role, the significance of security detection, automation, and response is growing. However, traditional security information and event management (SIEM) systems designed for outdated environments struggle to keep up with the challenges of today, let alone the unforeseen risks of tomorrow.

Go beyond simple detection with your SIEM. Discover how to secure your cloud and on-premises environments through the Microsoft Sentinel Workshop. In this workshop, we will collaborate with you to:

Identify threats within your Microsoft 365 cloud and on-premises environments, spanning email, identity, and data.

Understand effective mitigation strategies by showcasing the capabilities of Microsoft 365 and Azure security products in countering identified threats.

Develop a roadmap for implementing Microsoft Sentinel, including technical deployment guidance, to build a business case for its production deployment.

Experience the advantages of a managed SIEM by leveraging a true cloud-native solution monitored and managed by our cybersecurity experts.

Gain hands-on experience in threat discovery, analysis using Microsoft Sentinel, and automating Security Operations to enhance their effectiveness.

# Weekly Agenda:

| | |
|---|---|
| **Week 1** | Pre-engagement |
| **Week 2** | Readiness (Optional) |
| **Week 2** | Engagement Setup |
| **Week 2-4** | Data Collection |
| **Week 5** | Threat Exploration and Report Generation |
| **Week 5** | Results and Next Steps |
| **Week 5** | Engagement Decommissioning |

# Customer Requirements for a Free Workshop:

| 500+ | 250+ |
|---|---|
| Azure Active Directory Premium Available Units | Monthly Active Units for Exchange Online, SharePoint Online, or Microsoft Teams |
