

Process Optimization Workshop

Identify and prioritize processes that can be optimized using Power Platform functionality.

Do you need support to identify and prioritize processes that could be optimized or made more efficient with Power Platform technology? We can help.

This workshop is designed for organizations that have yet to automate manual and often repetitive tasks, whether internally or in dealing with customers and partners. People and technology must work together to unlock their full potential. In this workshop, you'll discover how to save time and money, while also enhancing employee motivation and making better use of data for value creation.

As your business-focused IT partner, we will guide you through a structured mapping of processes and workflows that could benefit from optimization. Leveraging our expertise with Microsoft Power Platform, we will present a tailored business case for each identified area.

Workshop Output

After the workshop, you'll receive a comprehensive report, including:

- An overview of the identified processes and workflows for optimization.
- Detailed estimates for implementing solutions on the selected focus areas.
- ROI calculations for the chosen optimizations (where applicable).
- Recommendations on how to proceed with each process for maximum value.

Note: If more than 5 areas are identified, any additional tasks will be estimated on a rolling time basis. The first 5 are included in the workshop price.

Workshop Structure

- The workshop typically lasts about 3 hours but may vary depending on the scope.
- You will need to involve relevant process owners and key contributors to ensure that the identified processes are well-qualified for the workshop's focus. Abakion facilitates the process and will work with you to agree on the workshop's focus and scope.
