msdyn_agentstatushistory entity reference

Article • 03/17/2023

> **Note**
>
> Unsure about table vs. entity? See **Developers: Understand terminology in Microsoft Dataverse**. Agent status history entity records any changes to agent's presence or available capacity.

Added by: Omnichannel – Base Solution

Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	True
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_rulesetid

Property	Value
Description	
DisplayName	Rule Set
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_rulesetid
RequiredLevel	None
Targets	msdyn_decisionruleset
Type	Lookup

msdyn_steporder

Property	Value
Description	
DisplayName	Step Order
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_steporder
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_type

Property	Value
Description	
DisplayName	Step Type
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_type
RequiredLevel	None
Type	Picklist

msdyn_type Options

Value	Label
192350000	Prioritization
192350001	AssignmentRuleSelection
192350002	Assignment

msdyn_UniqueName

Property	Value
Description	Unique Name for the entity.
DisplayName	Unique Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_uniquename
MaxLength	128
RequiredLevel	SystemRequired
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon

Property	Value
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Assignment Configuration Step
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Assignment Configuration Step
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647

Property	Value
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

msdyn_authenticationsettings table/entity reference

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Stores the settings for user authentication

Added by: Omnichannel – Base Solution

ImportSequenceNumber

Added by: Basic Solution Solution

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

IsCustomizable

Added by: Basic Solution Solution

Property	Value
Description	For internal use only.
DisplayName	Is Customizable
IsValidForForm	False
IsValidForRead	True
LogicalName	iscustomizable
RequiredLevel	SystemRequired
Type	ManagedProperty

msdyn_blockassignment

Property	Value
Description	The block assignment of the capacity profile.
DisplayName	Block Assignment
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_blockassignment
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_blockassignment Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_capacityprofileId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Capacity Profile
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_capacityprofileid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_defaultmaxunits

Property	Value
Description	The default max units of the capacity profile.
DisplayName	Default Max Units
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_defaultmaxunits
MaxValue	100
MinValue	0
RequiredLevel	ApplicationRequired
Type	Integer

msdyn_name

Property	Value
Description	The name of the Capacity Profile.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_resetduration

Property	Value
Description	The reset duration of the capacity profile.
DisplayName	Reset Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_resetduration
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_resetduration Options

Value	Label
192350000	Immediate
192350001	Daily

msdyn_UniqueName

Property	Value
Description	Unique Name for the entity.
DisplayName	Unique Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_uniquename
MaxLength	128
RequiredLevel	SystemRequired
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype

msdyn_conversationmessageblock table

Article • 08/08/2023

A Message Block would constitute a block of messages up till an agent responds (including the messages sent by the agent). A follow up message, after an agent responds, will create another message block, this block again ends with the messages from the agent.

> **Note**
>
> You can only use this table to enable change tracking. You can't customize this table.

Added by: Omnichannel – Base Solution

Messages

Message	Web API Operation	SDK Assembly
Assign	PATCH [*org URI*]/api/data/v9.0/msdyn_conversationmessageblocks(*msdyn_conversationmessageblockid*) Update `ownerid` property.	AssignRequest

msdyn_clienttimestamp

Property	Value
DateTimeBehavior	UserLocal
Description	Utc Timestamp from client
DisplayName	Client Timestamp
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_clienttimestamp

Property	Value
RequiredLevel	None
Type	DateTime

msdyn_copilotinteractionId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Copilot Interaction
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_copilotinteractionid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_interactioncontext

Property	Value
Description	
DisplayName	Interaction Context
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_interactioncontext
MaxLength	1048576
RequiredLevel	None
Type	Memo

msdyn_interactiondataid

Property	Value
Description	
DisplayName	Interaction Data Id
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_interactiondataid
RequiredLevel	None
Targets	msdyn_copilotinteractiondata
Type	Lookup

msdyn_interactionforid

Property	Value
Description	
DisplayName	Interaction For Id
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_interactionforid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_interactionforlogicalname

Property	Value
Description	
DisplayName	Interaction For Logical Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_interactionforlogicalname
MaxLength	100
RequiredLevel	None
Type	String

msdyn_interactiontype

Property	Value
Description	
DisplayName	Interaction Type
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_interactiontype
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_interactiontype Choices/Options

Value	Label
100230301	ThumbsUp
100230302	ThumbsDown
100230303	ThumbsClear

Value	Label
100230304	Copy
100230305	Generated
100230306	SendToCustomer
100230307	EditAndSend
100230308	ManualCopy
100230309	Available

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_scenariorequestid

Property	Value
Description	
DisplayName	Scenario Request Id
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_scenariorequestid
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_scenariotype

Property	Value
Description	
DisplayName	Scenario Type
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	msdyn_scenariotype
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_scenariotype Choices/Options

Value	Label
100230201	Ask a question
100230202	Live conversation response
100230203	Write an email
100230204	Copilot
100230205	Case summary
100230206	Live conversation summary

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

statecode

Property	Value
Description	Status of the Copilot Interaction
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active

Value	Label	DefaultStatus	InvariantName
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Copilot Interaction
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Choices/Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1

Property	Value
RequiredLevel	None
Type	Integer

Read-only columns/attributes

These columns/attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

ActivityAdditionalParams

Property	Value
Description	Additional information provided by the external application as JSON. For internal use only.
DisplayName	Activity Additional Parameters
Format	TextArea
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	activityadditionalparams
MaxLength	8192
RequiredLevel	None
Type	Memo

ActivityId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the activity.
DisplayName	Activity
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	activityid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

ActualDurationMinutes

Property	Value
Description	Actual duration of the activity in minutes.
DisplayName	Actual Duration
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	actualdurationminutes

Property	Value
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

ActualEnd

Property	Value
DateTimeBehavior	UserLocal
Description	Actual end time of the activity.
DisplayName	Actual End
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	actualend
RequiredLevel	None
Type	DateTime

ActualStart

Property	Value
DateTimeBehavior	UserLocal
Description	Actual start time of the activity.
DisplayName	Actual Start
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	actualstart
RequiredLevel	None
Type	DateTime

BCC

Added by: Active Solution Solution

Property	Value
Description	Blind Carbon-copy (bcc) recipients of the activity.
DisplayName	BCC
IsValidForForm	True
IsValidForRead	True
LogicalName	bcc
RequiredLevel	None
Targets	account,contact,lead,systemuser

Property	Value
Type	PartyList

CC

Added by: Active Solution Solution

Property	Value
Description	Carbon-copy (cc) recipients of the activity.
DisplayName	CC
IsValidForForm	True
IsValidForRead	True
LogicalName	cc
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

Community

Property	Value
Description	Shows how contact about the social activity originated, such as from Twitter or Facebook. This field is read-only.
DisplayName	Social Channel
IsValidForForm	False
IsValidForRead	True
LogicalName	community
RequiredLevel	None
Type	Picklist

Community Choices/Options

Value	Label
0	Other
1	Facebook
2	Twitter
3	Line
4	Wechat
5	Cortana
6	Direct Line
7	Microsoft Teams
8	Direct Line Speech
9	Email
10	GroupMe
11	Kik
12	Telegram
13	Skype

Value	Label
14	Slack
15	WhatsApp
16	Apple Messages For Business
17	Google's Business Messages

Customers

Added by: Active Solution Solution

Property	Value
Description	Customer with which the activity is associated.
DisplayName	Customers
IsValidForForm	True
IsValidForRead	True
LogicalName	customers
RequiredLevel	None
Targets	account,contact
Type	PartyList

DeliveryPriorityCode

Property	Value
Description	Priority of delivery of the activity to the email server.
DisplayName	Delivery Priority
IsValidForForm	True
IsValidForRead	True
IsValidForUpdate	False
LogicalName	deliveryprioritycode
RequiredLevel	None
Type	Picklist

DeliveryPriorityCode Choices/Options

Value	Label
0	Low
1	Normal
2	High

Description

Property	Value
Description	Description of the activity.
DisplayName	Description
Format	Text

Property	Value
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	description
MaxLength	2000
RequiredLevel	None
Type	Memo

ExchangeItemId

Property	Value
Description	The message id of activity which is returned from Exchange Server.
DisplayName	Exchange Item ID
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	exchangeitemid
MaxLength	200
RequiredLevel	None
Type	String

ExchangeWebLink

Property	Value
Description	Shows the web link of Activity of type email.
DisplayName	Exchange WebLink
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	exchangeweblink
MaxLength	1250
RequiredLevel	None
Type	String

From

Added by: Active Solution Solution

Property	Value
Description	Person who the activity is from.
DisplayName	From
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	from
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

IsBilled

Property	Value
Description	Information regarding whether the activity was billed as part of resolving a case.
DisplayName	Is Billed
IsValidForForm	False
IsValidForRead	True
LogicalName	isbilled
RequiredLevel	None
Type	Boolean

IsBilled Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

IsMapiPrivate

Property	Value
Description	For internal use only.

Property	Value
DisplayName	Is Private
IsValidForForm	False
IsValidForRead	True
LogicalName	ismapiprivate
RequiredLevel	None
Type	Boolean

IsMapiPrivate Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

IsWorkflowCreated

Property	Value
Description	Information regarding whether the activity was created from a workflow rule.
DisplayName	Is Workflow Created
IsValidForForm	False
IsValidForRead	True
LogicalName	isworkflowcreated
RequiredLevel	None
Type	Boolean

IsWorkflowCreated Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

LastOnHoldTime

Added by: Active Solution Solution

Property	Value
DateTimeBehavior	UserLocal
Description	Contains the date and time stamp of the last on hold time.
DisplayName	Last On Hold Time
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	lastonholdtime

Property	Value
RequiredLevel	None
Type	DateTime

LeftVoiceMail

Property	Value
Description	Left the voice mail
DisplayName	Left Voice Mail
IsValidForForm	True
IsValidForRead	True
LogicalName	leftvoicemail
RequiredLevel	None
Type	Boolean

LeftVoiceMail Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_additionalcontext

Property	Value
Description	
DisplayName	Additional Context
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_additionalcontext
MaxLength	1048576
RequiredLevel	None
Type	Memo

msdyn_transcriptforid

Property	Value
Description	
DisplayName	Transcript For Id
FormatName	Text
IsLocalizable	False
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_transcriptforid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_transcriptforlogicalname

Property	Value
Description	
DisplayName	Transcript For Logical Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_transcriptforlogicalname
MaxLength	100
RequiredLevel	None
Type	String

OptionalAttendees

Added by: Active Solution Solution

Property	Value
Description	List of optional attendees for the activity.
DisplayName	Optional Attendees
IsValidForForm	True
IsValidForRead	True
LogicalName	optionalattendees
RequiredLevel	None
Targets	account,contact,entitlement,equipment,knowledgearticle,lead,msdyn_salessuggestion,queue,systemuser,unresolvedaddress
Type	PartyList

Organizer

Added by: Active Solution Solution

Property	Value
Description	Person who organized the activity.
DisplayName	Organizer
IsValidForForm	True
IsValidForRead	True
LogicalName	organizer

Property	Value
RequiredLevel	None
Targets	systemuser
Type	PartyList

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the user or team who owns the activity.
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

Partners

Added by: Active Solution Solution

Property	Value
Description	Outsource vendor with which activity is associated.
DisplayName	Outsource Vendors
IsValidForForm	True
IsValidForRead	True
LogicalName	partners
RequiredLevel	None
Targets	account,contact
Type	PartyList

PriorityCode

Property	Value
Description	Priority of the activity.
DisplayName	Priority
IsValidForForm	True
IsValidForRead	True
LogicalName	prioritycode
RequiredLevel	None
Type	Picklist

PriorityCode Choices/Options

Value	Label
0	Low
1	Normal
2	High

ProcessId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the Process.
DisplayName	Process
IsValidForForm	False
IsValidForRead	True
LogicalName	processid
RequiredLevel	None
Type	Uniqueidentifier

RegardingObjectId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the object with which the activity is associated.
DisplayName	Regarding
IsValidForForm	True
IsValidForRead	True
LogicalName	regardingobjectid
RequiredLevel	None
Targets	account,adx_invitation,bookableresourcebooking,bookableresourcebookingheader,bulkoperation,campaign,campaignactivity,contact,contract,entitler
Type	Lookup

RegardingObjectIdName

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjectidname
MaxLength	400
RequiredLevel	None
Type	String

RegardingObjectIdYomiName

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjectidyominame
MaxLength	400
RequiredLevel	None
Type	String

RegardingObjectTypeCode

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjecttypecode
RequiredLevel	None
Type	EntityName

RequiredAttendees

Added by: Active Solution Solution

Property	Value
Description	List of required attendees for the activity.
DisplayName	Required Attendees
IsValidForForm	True
IsValidForRead	True
LogicalName	requiredattendees
RequiredLevel	None
Targets	account,contact,entitlement,equipment,knowledgearticle,lead,msdyn_salessuggestion,queue,systemuser,unresolvedaddress
Type	PartyList

Resources

Added by: Active Solution Solution

Property	Value
Description	Users or facility/equipment that are required for the activity.
DisplayName	Resources
IsValidForForm	True
IsValidForRead	True
LogicalName	resources
RequiredLevel	None
Targets	equipment,systemuser
Type	PartyList

ScheduledDurationMinutes

Property	Value
Description	Scheduled duration of the activity, specified in minutes.
DisplayName	Scheduled Duration
Format	Duration
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	scheduledurationminutes
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

ScheduledEnd

Property	Value
DateTimeBehavior	UserLocal
Description	Scheduled end time of the activity.
DisplayName	Due Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduledend
RequiredLevel	None
Type	DateTime

ScheduledStart

Property	Value
DateTimeBehavior	UserLocal
Description	Scheduled start time of the activity.
DisplayName	Start Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduledstart
RequiredLevel	None
Type	DateTime

ServiceId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of an associated service.
DisplayName	Service
IsValidForForm	False
IsValidForRead	True
LogicalName	serviceid
RequiredLevel	None
Targets	service

Property	Value
Type	Lookup

SLAId

Added by: Active Solution Solution

Property	Value
Description	Choose the service level agreement (SLA) that you want to apply to the case record.
DisplayName	SLA
IsValidForForm	True
IsValidForRead	True
LogicalName	slaid
RequiredLevel	None
Targets	sla
Type	Lookup

SortDate

Property	Value
DateTimeBehavior	UserLocal
Description	Shows the date and time by which the activities are sorted.
DisplayName	Sort Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	sortdate
RequiredLevel	None
Type	DateTime

StageId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the Stage.
DisplayName	(Deprecated) Process Stage
IsValidForForm	False
IsValidForRead	True
LogicalName	stageid
RequiredLevel	None
Type	Uniqueidentifier

StateCode

Property	Value
Description	Status of the activity.

Property	Value
DisplayName	Activity Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

StateCode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Open	1	Open
1	Completed	2	Completed
2	Canceled	3	Canceled
3	Scheduled	4	Scheduled

StatusCode

Property	Value
Description	Reason for the status of the activity.
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

StatusCode Choices/Options

Value	Label	State
1	Open	0
2	Completed	1
3	Canceled	2
4	Scheduled	3

Subject

Property	Value
Description	Subject associated with the activity.
DisplayName	Subject
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	subject
MaxLength	400
RequiredLevel	ApplicationRequired
Type	String

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

To

Added by: Active Solution Solution

Property	Value
Description	Person who is the receiver of the activity.
DisplayName	To
IsValidForForm	True
IsValidForRead	True
LogicalName	to
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

TransactionCurrencyId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the currency associated with the activitypointer.
DisplayName	Currency
IsValidForForm	True
IsValidForRead	True
LogicalName	transactioncurrencyid
RequiredLevel	None

Property	Value
Targets	transactioncurrency
Type	Lookup

TraversedPath

Added by: Active Solution Solution

Property	Value
Description	For internal use only.
DisplayName	(Deprecated) Traversed Path
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	traversedpath
MaxLength	1250
RequiredLevel	None
Type	String

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_avatarurl
MaxLength	4000
RequiredLevel	ApplicationRequired
Type	String

msdyn_averagewaittime_enabled

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Indicates whether display of wait time is enabled
DisplayName	Indicates whether display of wait time is enabled
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_averagewaittime_enabled

Property	Value
RequiredLevel	None
Type	Boolean

msdyn_averagewaittime_enabled Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_callingoptions

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	List of calling options available for the chat widget
DisplayName	Calling options
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_callingoptions
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_callingoptions Options

Value	Label
192350000	No calling
192350001	Video and voice calling
192350002	Voice only

msdyn_cobrowseprovider

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Select a co-browse provider
DisplayName	Co-browse provider

Property	Value
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_cobrowseprovider
MaxLength	100
RequiredLevel	None
Type	String

msdyn_Duringnonoperatinghours

Property	Value
Description	During non-operating hours
DisplayName	During non-operating hours
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_duringnonoperatinghours
MaxLength	100
RequiredLevel	None
Type	String

msdyn_EmailTemplate

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Email Template
DisplayName	Email Template
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_emailtemplate

Property	Value
MaxLength	100
RequiredLevel	None
Type	String

msdyn_enablechatreconnect

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	This will let customers reconnect to their previous session.
DisplayName	Turn on reconnect to previous chat
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablechatreconnect
RequiredLevel	None
Type	Boolean

msdyn_enablechatreconnect Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_Enablechattranscriptdownload

Property	Value
Description	Allow download of transcript
DisplayName	Allow download of transcript
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablechattranscriptdownload
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_Enablechattranscriptdownload Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_Enablechattranscriptemail

Property	Value
Description	Allow email of transcript
DisplayName	Allow email of transcript
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablechattranscriptemail
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_Enablechattranscriptemail Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_enablecobrowse

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Co-browse allows agent and customer to interact on the same web page in real time
DisplayName	Enable Co-browse
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablecobrowse
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_enablecobrowse Options

Value	Label
1	Enabled
0	Disabled

DefaultValue: False

msdyn_Enablefileattachmentsforagents

Property	Value
Description	Enable file attachments for agents
DisplayName	Enable file attachments for agents
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablefileattachmentsforagents
RequiredLevel	None
Type	Boolean

msdyn_Enablefileattachmentsforagents Options

Value	Label
1	Yes
0	No

DefaultValue: True

msdyn_Enablefileattachmentsforcustomers

Property	Value
Description	Enable file attachments for customers
DisplayName	Enable file attachments for customers
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablefileattachmentsforcustomers
RequiredLevel	None
Type	Boolean

msdyn_Enablefileattachmentsforcustomers Options

Value	Label

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_enablescreensharing

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Enable Screen sharing
DisplayName	Enable Screen sharing
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablescreensharing
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_enablescreensharing Options

Value	Label
1	Enabled
0	Disabled

DefaultValue: False

msdyn_genericagentdisplayname

Property	Value
Description	Display Agent Generic Name
DisplayName	Display Generic Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_genericagentdisplayname
MaxLength	100
RequiredLevel	None

Property	Value
Type	String

msdyn_infolabel

Property	Value
Description	Label string indicating user to save the record to add location information
DisplayName	infolabel
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_infolabel
MaxLength	100
RequiredLevel	None
Type	String

msdyn_Language

Property	Value
Description	Language in which chat widget is rendered
DisplayName	Language
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_language
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_Language Options

Value	Label
192350000	Auto-Detect
192360014	English

msdyn_livechatconfigId

Property	Value

Property	Value
Description	Unique identifier for entity instances
DisplayName	Chat Widget
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_livechatconfigid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_liveworkstreamid

Property	Value
Description	Work Stream Identifier
DisplayName	Work stream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamid
RequiredLevel	ApplicationRequired
Targets	msdyn_liveworkstream
Type	Lookup

msdyn_Mailbox

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	The mailbox where your email transcripts will be sent from.
DisplayName	“From” mailbox
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_mailbox
MaxLength	100
RequiredLevel	None

Property	Value
Type	String

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_oc_geolocationprovider

Property	Value
Description	Geo Location Provider API Key
DisplayName	Provider API key
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_oc_geolocationprovider
RequiredLevel	None
Targets	msdyn_oc_geolocationprovider
Type	Lookup

msdyn_ocWidgetLanguage

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	The language of the chat widget.
DisplayName	Language
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_ocwidgetlanguage
RequiredLevel	ApplicationRequired
Targets	msdyn_oclanguage
Type	Lookup

msdyn_offlinewidgetsubtitle

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Description for offline widget subtitle attribute
DisplayName	Offline Widget Subtitle
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_offlinewidgetsubtitle
MaxLength	4000
RequiredLevel	None
Type	String

msdyn_offlinewidgetthemecolor

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Description for offline widget theme color attribute
DisplayName	Offline Widget Theme Color
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_offlinewidgetthemecolor
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_offlinewidgetthemecolor Options

Value	Label
19236001	Red
19236002	Blue
19236003	Green
19236004	Black
192350001	Orange
192350002	Pink
192350003	Grey
192350004	Violet
192350005	Brown
192350006	Clay
192350007	Purple
192360017	Teal

msdyn_offlinewidgettitle

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Description for offline widget title attribute
DisplayName	Offline Widegt Title
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_offlinewidgettitle
MaxLength	4000
RequiredLevel	ApplicationRequired
Type	String

msdyn_operatinghourid

Property	Value
Description	Unique identifier for Operating hour associated with Chat widget.
DisplayName	Operating hours
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_operatinghourid
RequiredLevel	None
Targets	msdyn_operatinghour
Type	Lookup

msdyn_portalurl

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Provide a link to the web portal where your chat is hosted.
DisplayName	Portal URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_portalurl
MaxLength	100
RequiredLevel	None
Type	String

msdyn_positioninqueue_enabled

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Enable Position In Queue feature
DisplayName	Show position in queue
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_positioninqueue_enabled
RequiredLevel	None
Type	Boolean

msdyn_positioninqueue_enabled Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_postchatenabled

Property	Value
Description	Enable Post-Chat (Deprecated)
DisplayName	Post-chat Survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postchatenabled
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_postchatenabled Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_PostConversationSurvey

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Lookup to Forms Pro survey field
DisplayName	Survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurvey
RequiredLevel	None
Targets	msfp_survey
Type	Lookup

msdyn_PostConversationSurveyEnable

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	To enable or disable post conversation survey
DisplayName	Enable
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveyenable
RequiredLevel	None
Type	Boolean

msdyn_PostConversationSurveyEnable Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_PostConversationSurveyMessageText

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Prefix text for survey link message that will be sent to the user.
DisplayName	Message
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymessagetext
MaxLength	200
RequiredLevel	None
Type	String

msdyn_PostConversationSurveyMode

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Mode of the survey to be sent
DisplayName	Survey Mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymode
RequiredLevel	None
Type	Picklist

msdyn_PostConversationSurveyMode Options

Value	Label
192350000	Insert survey in conversation
192350001	Send survey link to conversation

msdyn_PrechatEnabled

Property	Value
Description	Enable Pre-chat survey feature
DisplayName	Pre-Chat Survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_prechatenabled
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_PrechatEnabled Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_PreChatQuestionnaireAuthenticated

Property	Value
Description	Prechat Question set for authenticated users

Property	Value
DisplayName	Question Set for Authenticated Users
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_prechatquestionnaireauthenticated
RequiredLevel	None
Targets	
Type	Lookup

msdyn_PreChatQuestionnaireUnauthenticated

Property	Value
Description	Prechat Question set for unauthenticated users
DisplayName	Question Set for Unauthenticated Users
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_prechatquestionnaireunauthenticated
RequiredLevel	None
Targets	
Type	Lookup

msdyn_proactivechatenabled

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Enable Proactive chat for this chat widget
DisplayName	Proactive-chat
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_proactivechatenabled
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_proactivechatenabled Options

Value	Label

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_redirectionurl

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	We'll redirect customers to this webpage.
DisplayName	Redirection URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_redirectionurl
MaxLength	100
RequiredLevel	None
Type	String

msdyn_requestvisitorlocation

Property	Value
Description	Enable Visitor Location Feature
DisplayName	Request visitor location
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_requestvisitorlocation
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_requestvisitorlocation Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_screensharingprovider

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Select a screen sharing provider
DisplayName	Screen sharing provider
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_screensharingprovider
MaxLength	100
RequiredLevel	None
Type	String

msdyn_showagentname

Property	Value
Description	Agent Display Name configuration for the chat widget
DisplayName	Anonymize Agent
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_showagentname
RequiredLevel	None
Type	Boolean

msdyn_showagentname Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_Showwidgetduringofflinehours

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Description for show/hide offline widget attribute
DisplayName	Show widget during offline hours
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_showwidgetduringofflinehours
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_Showwidgetduringofflinehours Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_timetoreconnectwithpreviousagent

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	The previous agent's capacity will be held for this time period.
DisplayName	Reconnect to previous agent for
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_timetoreconnectwithpreviousagent
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_widgetAppId

Property	Value
Description	Widget App Identifier used to identify the chat widget

Property	Value
DisplayName	Widget App Id
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_widgetappid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_WidgetLocale

Property	Value
Description	The language of the chat widget.
DisplayName	Language
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_widgetlocale
RequiredLevel	None
Targets	msdyn_chatwidgetlanguage
Type	Lookup

msdyn_widgetPosition

Property	Value
Description	Chat position relative to the page
DisplayName	Position
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_widgetposition
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_widgetPosition Options

Value	Label
192236010	Bottom right
192236011	Bottom left

msdyn_WidgetSnippet

Property	Value
Description	Javascript snippet which can be embedded in a webpage
DisplayName	Widget Snippet
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_widgetsnippet
MaxLength	2000
RequiredLevel	None
Type	Memo

msdyn_widgetSubtitle

Property	Value
Description	Subtitle for the chat widget
DisplayName	Subtitle
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_widgetsubtitle
MaxLength	100
RequiredLevel	None
Type	String

msdyn_widgetThemeColor

Property	Value
Description	Theme color for the chat widget

Property	Value
DisplayName	Theme Color
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_widgetthemecolor
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_widgetThemeColor Options

Value	Label
19236001	Red
19236002	Blue
19236003	Green
19236004	Black
192350001	Orange
192350002	Pink
192350003	Grey
192350004	Violet
192350005	Brown
192350006	Clay
192350007	Purple
192360017	Teal

msdyn_widgetTitle

Property	Value
Description	Title for the chat widget
DisplayName	Title
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_widgettitle
MaxLength	100

Property	Value
RequiredLevel	ApplicationRequired
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type

Property	Value
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Chat widget
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Chat widget
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

DefaultValue: False

msdyn_latitude

Property	Value
Description	Latitude where customer initiated chat
DisplayName	Latitude
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_latitude
MaxLength	100
RequiredLevel	None
Type	String

msdyn_livechatengagementctxId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Live Chat Context
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_livechatengagementctxid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_livechatengagementid

Property	Value
Description	Unique identifier for engagement context
DisplayName	Live Chat Engagement Id
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_livechatengagementid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_liveworkitemid

Property	Value
Description	Corresponding conversation identifier for the chat
DisplayName	Conversation
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkitemid
RequiredLevel	None
Targets	msdyn_ocliveworkitem
Type	Lookup

msdyn_locale

Property	Value
Description	Locale for this chat
DisplayName	Locale
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_locale
MaxLength	100
RequiredLevel	None
Type	String

msdyn_longitude

Property	Value
Description	Longitude where customer initiated chat
DisplayName	Longitude
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_longitude
MaxLength	100
RequiredLevel	None
Type	String

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name

Property	Value
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_originurl

Property	Value
Description	Browser URL where customer initiated chat
DisplayName	Origin Url
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_originurl
MaxLength	2048
RequiredLevel	None
Type	String

msdyn_os

Property	Value
Description	Operating system where customer initiated chat
DisplayName	Operating System
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_os
MaxLength	100
RequiredLevel	None
Type	String

msdyn_portalcontactid

Property	Value
Description	Customer portal identifier if exists
DisplayName	Portal Contact Id

Property	Value
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_portalcontactid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_PostalCode

Property	Value
Description	Postal code where customer initiated chat
DisplayName	Zip/Postal Code
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postalcode
MaxLength	100
RequiredLevel	None
Type	String

msdyn_State

Property	Value
Description	State where customer initiated chat
DisplayName	State/Province
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_state
MaxLength	300
RequiredLevel	None
Type	String

msdyn_Street1

Property	Value
Description	Street 1 where customer initiated chat
DisplayName	Street 1
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_street1
MaxLength	200
RequiredLevel	None
Type	String

msdyn_Street2

Property	Value
Description	Street 2 where customer initiated chat
DisplayName	Street 2
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_street2
MaxLength	200
RequiredLevel	None
Type	String

msdyn_Street3

Property	Value
Description	Street 3 where customer initiated chat
DisplayName	Street 3
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_street3

Property	Value
MaxLength	200
RequiredLevel	None
Type	String

msdyn_widgetappid

Property	Value
Description	Corresponding widget application identifier for the chat
DisplayName	Chat Widget App Id
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_widgetappid
MaxLength	100
RequiredLevel	None
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id

Property	Value
DisplayName	Owner

192380000	Video
192390000	Co-browse
192400000	Screen sharing

msdyn_closedon

Property	Value
DateTimeBehavior	UserLocal

Property	Value
Description	Date and time when conversation was closed
DisplayName	Closed On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_closedon
RequiredLevel	None
Type	DateTime

msdyn_createdon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when conversation was created
DisplayName	Created On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_createdon
RequiredLevel	None
Type	DateTime

msdyn_customer

Property	Value
Description	Customer associated to the conversation
DisplayName	Customer
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_customer
RequiredLevel	None
Targets	account,contact
Type	Customer

msdyn_customerIdType

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	

Property	Value
IsValidForForm	False
IsValidForRead	True
LogicalName	msdyn_customeridtype
RequiredLevel	None
Type	EntityName

msdyn_customersentimentlabel

Property	Value
Description	Customer Sentiment Label powered by Sentiment Service
DisplayName	Customer Sentiment
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_customersentimentlabel
RequiredLevel	None
Type	Picklist

msdyn_customersentimentlabel Options

Value	Label
0	N/A
7	Very negative
8	Negative
9	Slightly negative
10	Neutral
11	Slightly positive
12	Positive
13	Very positive

msdyn_escalationcount

Property	Value
Description	Number of times conversation was escalated to Supervisor i.e. transferred to Supervisor
DisplayName	Escalation Count
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_escalationcount
MaxValue	2147483647
MinValue	0

Property	Value
RequiredLevel	None
Type	Integer

msdyn_initiatedon

Property	Value
DateTimeBehavior	UserLocal
Description	Time when conversation was initiated
DisplayName	Initiated On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_initiatedon
RequiredLevel	None
Type	DateTime

msdyn_liveconversationId

Property	Value
Description	Id of this ongoing conversation record
DisplayName	OngoingConversationId
IsValidForForm	False
IsValidForRead	True
LogicalName	msdyn_liveconversationid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_liveworkstreamid

Property	Value
Description	Work stream associated to the conversation
DisplayName	Work stream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamid
RequiredLevel	None
Targets	msdyn_liveworkstream
Type	Lookup

msdyn_modifiedon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when conversation was last modified
DisplayName	Modified On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_modifiedon
RequiredLevel	None
Type	DateTime

msdyn_oclastsessionid

Property	Value
Description	Last agent session
DisplayName	Last session Id
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_oclastsessionid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_queueid

Property	Value
Description	Unique identifier for msdyn_omnichannelqueue associated with Conversation
DisplayName	Queue
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_queueid
RequiredLevel	None
Targets	msdyn_omnichannelqueue
Type	Lookup

msdyn_startedon

Property	Value
DateTimeBehavior	UserLocal

Property	Value
Description	Date and time when conversation was started
DisplayName	Started On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_startedon
RequiredLevel	None
Type	DateTime

msdyn_statecode

Property	Value
Description	State of the conversation record
DisplayName	State
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_statecode
RequiredLevel	None
Type	Picklist

msdyn_statecode Options

Value	Label
0	Open
1	Active
2	Waiting
3	Closed
4	Wrap-up

msdyn_statuscode

Property	Value
Description	Reason for the status of Ongoing conversation record
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_statuscode
RequiredLevel	None
Type	Picklist

msdyn_statuscode Options

Value	Label
1	Open
2	Active
3	Waiting
4	Closed
5	Wrap-up

msdyn_statusupdatedon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when conversation status was last modified
DisplayName	Status Updated On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_statusupdatedon
RequiredLevel	None
Type	DateTime

msdyn_subject

Property	Value
Description	Subject associated with the conversation record
DisplayName	Subject
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_subject
MaxLength	200
RequiredLevel	ApplicationRequired
Type	String

msdyn_title

Property	Value
Description	Conversation Title
DisplayName	Title
FormatName	Text

Property	Value
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_title
MaxLength	100
RequiredLevel	None
Type	String

msdyn_transfercount

Property	Value
Description	Number of times the conversation was transferred
DisplayName	Transfer Count
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_transfercount
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_workstreamworkdistributionmode

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Work distribution mode of the associated work stream
DisplayName	Work distribution mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_workstreamworkdistributionmode
RequiredLevel	None
Type	Picklist

msdyn_workstreamworkdistributionmode Options

Value	Label
192350000	Push
192350001	Pick

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the user or team who owns the conversation record.
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value

Property	Value
Description	Status of the Ongoing conversation record
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Open	1	Open

4	Wrap-up	5	Wrap-up

statuscode

Property	Value
Description	Reason for the status of Ongoing conversation record
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Open	0
2	Active	1
3	Waiting	2
4	Closed	3
5	Wrap-up	4

TimeZoneRuleVersionNumber

Property	Value

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_AllowedPresences

Property	Value
Description	Allowed base presences for the work stream
DisplayName	Allowed Presences
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_allowedpresences
RequiredLevel	ApplicationRequired
Type	MultiSelectPicklist

msdyn_AllowedPresences Choices/Options

Value	Label
192360000	Available
192360001	Busy
192360002	Busy - DND
192360003	Away
192360004	Offline

msdyn_APIKey

Added by: Omnichannel – SMS Solution

Property	Value
Description	The API Key equivalent to password of account set up with TeleSign
DisplayName	API Key
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_apikey
MaxLength	100
RequiredLevel	None
Type	String

msdyn_apikeyversionnumber

Added by: Omnichannel – SMS Solution

Property	Value
Description	Version number of the API key
DisplayName	API Key Version Number
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_apikeyversionnumber

Property	Value
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_AssignWorkItemAfterDecline

Property	Value
Description	Set the time after which a work item can be assigned to the agent again after they have declined the work item or the request has timed out
DisplayName	Assign WorkItem After Decline or Timeout
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_assignworkitemafterdecline
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_AutoCloseAfterInactivity

Property	Value
Description	Set the time after which the work item will be closed if there is no activity on the work item.
DisplayName	Auto-close after inactivity
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_autocloseafterinactivity
MaxValue	2147483647
MinValue	0
RequiredLevel	ApplicationRequired
Type	Integer

msdyn_blockcapacityforwrapup

Property	Value
Description	Time for which the agent's capacity is blocked for wrap up state. After this amount of time the agent's capacity will be released.
DisplayName	Block capacity for wrap up state
Format	None

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_blockcapacityforwrapup
MaxValue	43200
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_bot_queue

Property	Value
Description	The queue created for the bot in the workstream.
DisplayName	Bot queue
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_bot_queue
RequiredLevel	None
Targets	queue
Type	Lookup

msdyn_bot_rule

Property	Value
Description	The rule added to workstream for bot routing.
DisplayName	Bot rule
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_bot_rule
MaxLength	100
RequiredLevel	None
Type	String

msdyn_bot_user

Property	Value
Description	The user of the bot.
DisplayName	Bot user
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_bot_user
RequiredLevel	None
Targets	systemuser
Type	Lookup

msdyn_capacityformat

Property	Value
Description	Defines how the work stream will measure capacity consumption
DisplayName	Capacity format
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_capacityformat
RequiredLevel	None
Type	Picklist

msdyn_capacityformat Choices/Options

Value	Label
192350000	Unit based
192360000	Profile based

msdyn_CapacityRequired

Property	Value
Description	The units of capacity that should be available for an item of this work stream to be processed.
DisplayName	Capacity
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_capacityrequired
MaxValue	2147483647
MinValue	0
RequiredLevel	ApplicationRequired
Type	Integer

msdyn_ConnectorsURL

Added by: Omnichannel – SMS Solution

Property	Value
Description	Flow URL for Dynamics 365 connector
DisplayName	Connectors URL
FormatName	Url
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_connectorsurl
MaxLength	100
RequiredLevel	None
Type	String

msdyn_conversationmode

Added by: Omnichannel – Chat Solution

Property	Value
Description	Conversation mode of chat channels
DisplayName	Conversation mode of chat channels
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_conversationmode
RequiredLevel	None
Type	Picklist

msdyn_conversationmode Choices/Options

Value	Label
192350000	Live Chat
192350001	Persistent Chat

msdyn_CustomerID

Added by: Omnichannel – SMS Solution

Property	Value
Description	The Customer Id equivalent to username of account set up with TeleSign
DisplayName	Customer ID
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_customerid

Property	Value
MaxLength	100
RequiredLevel	None
Type	String

msdyn_defaultqueue

Added by: Dynamics 365 UR OmnichanelBase Dependency Solution

Property	Value
Description	Link the default queue to the workstream.
DisplayName	Default Queue
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_defaultqueue
RequiredLevel	Recommended
Targets	queue
Type	Lookup

msdyn_direction

Property	Value
Description	Direction to indicate if it's an inbound, outbound, direct inbound or direct outbound workstream
DisplayName	Direction
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_direction
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_direction Choices/Options

Value	Label
0	Inbound
1	Outbound
2	Direct Inbound
3	Direct Outbound

msdyn_enableagentaffinity

Property	Value
Description	Keep same agent for entire conversation

Property	Value
DisplayName	Keep same agent for entire conversation
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enableagentaffinity
RequiredLevel	None
Type	Boolean

msdyn_enableagentaffinity Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_enableautomatedmessages

Property	Value
Description	Option for allowing automated messages or not
DisplayName	Allow Automated Messages
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enableautomatedmessages
RequiredLevel	None
Type	Boolean

msdyn_enableautomatedmessages Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: True

msdyn_enableselectingfrompushbasedworkstreams

Property	Value
Description	Agents can choose to work on items from push-based work streams.
DisplayName	Enable selecting from push-based work streams
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enableselectingfrompushbasedworkstreams

Property	Value
RequiredLevel	None
Type	Boolean

msdyn_enableselectingfrompushbasedworkstreams Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_EntityRoutingConfigurationId

Property	Value
Description	Unique identifier for Workstream Entity Configuration associated with Work Stream.
DisplayName	Entity
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_entityroutingconfigurationid
RequiredLevel	None
Targets	msdyn_entityroutingconfiguration
Type	Lookup

msdyn_FallBackLanguage

Property	Value
Description	Fall back language to be used for Live chat
DisplayName	FallBack Language
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_fallbacklanguage
MaxLength	100
RequiredLevel	None
Type	String

msdyn_FollowUpAfterWaiting

Property	Value
Description	Set the time after which the work item should be offered to an agent if the work item has been waiting for input.
DisplayName	Follow-up after waiting

Property	Value
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_followupafterwaiting
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_handlingtimethreshold

Property	Value
Description	Declare the expected handling time under which work items for this work stream should get resolved
DisplayName	Handling Time Threshold
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_handlingtimethreshold
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_isdefault

Property	Value
Description	Indicates whether this is the default workstream or not.
DisplayName	Is Default
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_isdefault
RequiredLevel	None
Type	Boolean

msdyn_isdefault Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_LastValidationOn

Added by: Omnichannel – SMS Solution

Property	Value
DateTimeBehavior	TimeZoneIndependent
Description	The time when Validation api was last run
DisplayName	Last Validation On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_lastvalidationon
RequiredLevel	None
Type	DateTime

msdyn_LastValidationStatus

Added by: Omnichannel – SMS Solution

Property	Value
Description	The status of the last Validation results
DisplayName	Last Validation Status
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_lastvalidationstatus
MaxLength	100
RequiredLevel	None
Type	String

msdyn_liveworkstreamId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Work Stream
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_liveworkstreamid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_masterentityroutingconfigurationid

Property	Value
Description	Unique identifier for master entity routing configuration associated with work stream.
DisplayName	Entity
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_masterentityroutingconfigurationid
RequiredLevel	None
Targets	msdyn_masterentityroutingconfiguration
Type	Lookup

msdyn_matchinglogic

Added by: Omnichannel - Skill Based Routing Solution

Property	Value
Description	Matching logic used for Skill Based Routing like Exact Match or Closest match
DisplayName	Matching Logic
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_matchinglogic
RequiredLevel	None
Type	Picklist

msdyn_matchinglogic Choices/Options

Value	Label
192350000	Exact Match
192350001	Closest Match

msdyn_MaxConcurrentConnection

Property	Value
Description	Maximum number of concurrent sessions that an agent can work for a work item of a particular stream.
DisplayName	Max Concurrency
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_maxconcurrentconnection
MaxValue	2147483647
MinValue	1

Property	Value
RequiredLevel	Recommended
Type	Integer

msdyn_mode

Property	Value
Description	Mode of experience
DisplayName	Mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_mode
RequiredLevel	None
Type	Picklist

msdyn_mode Choices/Options

Value	Label
717210000	Legacy
717210001	Simplified

msdyn_name

Property	Value
Description	Name of Work stream
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_Notification

Property	Value
Description	Notification type
DisplayName	Notification
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	msdyn_notification
RequiredLevel	None
Type	Picklist

msdyn_Notification Choices/Options

Value	Label
100000000	Directly open session
100000001	Screen pop with timeout
100000002	Screen pop with decline

msdyn_notificationscenarioplaceholder

Added by: Omnichannel for Customer Service Patch Solution

Property	Value
Description	Notification association with scenarios
DisplayName	notification scenario placeholder
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_notificationscenarioplaceholder
MaxLength	100
RequiredLevel	None
Type	String

msdyn_notificationtemplate_consult

Added by: Omnichannel for Customer Service Patch Solution

Property	Value
Description	Consult notification template scenario
DisplayName	Consult
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_notificationtemplate_consult
MaxLength	200
RequiredLevel	None

Property	Value
Type	String

msdyn_notificationtemplate_incoming_auth

Added by: Dynamics 365 UR OmnichanelBase Dependency Solution

Property	Value
Description	Incoming authenticated notification template scenario
DisplayName	Incoming authenticated
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_notificationtemplate_incoming_auth
MaxLength	200
RequiredLevel	None
Type	String

msdyn_notificationtemplate_incoming_unauth

Added by: Omnichannel for Customer Service Patch Solution

Property	Value
Description	Incoming unauthenticated notification template scenario
DisplayName	Incoming unauthenticated
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_notificationtemplate_incoming_unauth
MaxLength	200
RequiredLevel	None
Type	String

msdyn_notificationtemplate_supervisorassign

Added by: Omnichannel for Customer Service Patch Solution

Property	Value
Description	supervisorAssign notification template scenario
DisplayName	SupervisorAssign
FormatName	Text

Property	Value
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_notificationtemplate_supervisorassign
MaxLength	200
RequiredLevel	None
Type	String

msdyn_notificationtemplate_transfer

Added by: Omnichannel for Customer Service Patch Solution

Property	Value
Description	Transfer notification template scenario
DisplayName	Transfer
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_notificationtemplate_transfer
MaxLength	200
RequiredLevel	None
Type	String

msdyn_outboundqueueid

Property	Value
Description	Unique identifier for outbound queue associated with workstream
DisplayName	Outbound queue
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_outboundqueueid
RequiredLevel	None
Targets	queue
Type	Lookup

msdyn_recordidentificationrule

Property	Value
Description	Record identification rule associated to a workstream
DisplayName	Record Identification Rule

Property	Value
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_recordidentificationrule
MaxLength	1048576
RequiredLevel	None
Type	Memo

msdyn_RecordIdentificationValidationRule

Property	Value
Description	Record Identification Validation Rule
DisplayName	Record Identification Validation Rule
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_recordidentificationvalidationrule
MaxLength	1048576
RequiredLevel	None
Type	Memo

msdyn_restrictdownloadrecording

Property	Value
Description	Restrict download of recording
DisplayName	Restrict download of recording
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_restrictdownloadrecording
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_restrictdownloadrecording Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_restrictdownloadtranscript

Property	Value
Description	Restrict download of transcript
DisplayName	Restrict download of transcript
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_restrictdownloadtranscript
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_restrictdownloadtranscript Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_routingcontractid

Added by: Dynamics 365 UR OmnichanelBase Dependency Solution

Property	Value
Description	Link contracts with live work streams.
DisplayName	Contract Id
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_routingcontractid
RequiredLevel	None
Targets	msdyn_decisioncontract
Type	Lookup

msdyn_Screenpoptimeout

Property	Value
Description	Time duration for which notification will be shown to agent.
DisplayName	Screen pop timeout
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_screenpoptimeout
MaxValue	2147483647

Property	Value
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_Screenpoptimeout_optionSet

Property	Value
Description	Time duration options for notification.
DisplayName	Screen pop timeout
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_screenpoptimeout_optionSet
RequiredLevel	None
Type	Picklist

msdyn_Screenpoptimeout_optionSet Choices/Options

Value	Label
30	30
60	60
90	90
120	120
150	150
180	180
210	210
240	240
270	270
300	300

msdyn_secureapikey

Added by: Omnichannel - SMS Patch Solution

Property	Value
Description	The secure API Key equivalent to password of account set up with TeleSign
DisplayName	Secure API Key
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_secureapikey

Property	Value
MaxLength	100
RequiredLevel	None
Type	String

msdyn_sessionscenarioplaceholder

Added by: Omnichannel for Customer Service Patch Solution

Property	Value
Description	Session association with scenarios
DisplayName	session scenario placeholder
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_sessionscenarioplaceholder
MaxLength	100
RequiredLevel	None
Type	String

msdyn_sessiontemplate_default

Added by: Dynamics 365 UR OmnichanelBase Dependency Solution

Property	Value
Description	Default session template scenario
DisplayName	Default
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_sessiontemplate_default
MaxLength	200
RequiredLevel	None
Type	String

msdyn_smsprovider

Added by: Omnichannel - SMS Patch Solution

Property	Value
Description	SMS Provider

Property	Value
DisplayName	SMS Provider
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_smsprovider
RequiredLevel	None
Type	Picklist

msdyn_smsprovider Choices/Options

Value	Label
192350000	TeleSign
192350001	Twilio

msdyn_streamsource

Property	Value
Description	The channel to which this workstream is attached
DisplayName	Channel
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_streamsource
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_streamsource Choices/Options

Value	Label
19241000	Microsoft Teams
192300000	WhatsApp
192310000	LINE
192320000	WeChat
192330000	Facebook
192340000	SMS
192350000	Entity Records
192350001	Twitter
192350002	Custom
192360000	Live chat
192370000	Voice
192380000	Video
192390000	Co-browse

Value	Label
192400000	Screen sharing
192440000	Voice call
192450000	Apple Messages for Business
192450001	Google's Business Messages

msdyn_TelesignInboundURL

Added by: Omnichannel – SMS Solution

Property	Value
Description	URL for TeleSign Inbound link
DisplayName	TeleSign Inbound URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_telesigninboundurl
MaxLength	200
RequiredLevel	None
Type	String

msdyn_TwilioInboundURL

Added by: Omnichannel - SMS Patch Solution

Property	Value
Description	URL for Twilio Inbound link
DisplayName	Twilio Inbound URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_twilioinboundurl
MaxLength	200
RequiredLevel	None
Type	String

msdyn_waitingtimethreshold

Property	Value
Description	Declare the expected waiting time under which work items for this work stream should be assigned to agents

Property	Value
DisplayName	Waiting Time Threshold
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_waitingtimethreshold
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_workdistributionmode

Property	Value
Description	Specifies the mode i.e Push/Pick for the workstream
DisplayName	Work Distribution Mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_workdistributionmode
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_workdistributionmode Choices/Options

Value	Label
192350000	Push
192350001	Pick

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Work stream
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active

Value	Label	DefaultStatus	InvariantName
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Work stream
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Choices/Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True

Property	Value
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only columns/attributes

msdyn_runtimeapi

Property	Value
Description	Function to be executed at runtime
DisplayName	Runtime API
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_runtimeapi
MaxLength	1000
RequiredLevel	None
Type	String

msdyn_subtitle

Property	Value
Description	Unique value to set the subtitle value
DisplayName	Subtitle
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_subtitle
MaxLength	1000
RequiredLevel	None
Type	String

msdyn_summary

Property	Value
Description	Unique value to set the summary
DisplayName	Summary
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_summary
MaxLength	2000

Property	Value
RequiredLevel	None
Type	String

msdyn_title

Property	Value
Description	The title of this macro action.
DisplayName	Title
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_title
MaxLength	100
RequiredLevel	None
Type	String

msdyn_visibility

Property	Value
Description	Unique value to set the visibility value
DisplayName	Visibility
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_visibility
MaxLength	100
RequiredLevel	None
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None

Property	Value
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Macro Action Template
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active

Value	Label	DefaultStatus	InvariantName
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Macro Action Template
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1

Property	Value
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

OwningBusinessUnit

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the business unit that owns the record
DisplayName	Owning Business Unit
IsValidForForm	False
IsValidForRead	True
LogicalName	owningbusinessunit
RequiredLevel	None
Targets	businessunit
Type	Lookup

OwningTeam

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the team that owns the record.
DisplayName	Owning Team
IsValidForForm	False
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the user that owns the record.

Property	Value
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser
Type	Lookup

VersionNumber

Added by: Active Solution Solution

Property	Value
Description	Version Number
DisplayName	Version Number
IsValidForForm	False
IsValidForRead	True
LogicalName	versionnumber
MaxValue	9223372036854775807

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_brandcolor

Property	Value
Description	The color in which tile for this connector is rendered
DisplayName	Brand Color
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_brandcolor
MaxLength	20
RequiredLevel	None
Type	String

msdyn_callback

Property	Value
Description	Sets the callback value
DisplayName	Callback
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_callback
MaxLength	100
RequiredLevel	None
Type	String

msdyn_categorykey

Property	Value
Description	A string label for the category under which this connector should be rendered
DisplayName	Category key
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_categorykey
MaxLength	100
RequiredLevel	None
Type	String

msdyn_categorylabel

Property	Value
Description	Textual display text for the category key under which this connector is to be displayed
DisplayName	Category Label
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_categorylabel
MaxLength	100
RequiredLevel	None
Type	String

msdyn_description

Property	Value
Description	Text describing this connector displayed in the designer
DisplayName	Description
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_description
MaxLength	1024
RequiredLevel	None
Type	String

msdyn_displayname

Property	Value
Description	The display name for this connector in the designer
DisplayName	Display Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_displayname
MaxLength	100
RequiredLevel	None
Type	String

msdyn_Icon

Property	Value
Description	Icon URL to be rendered for this connector
DisplayName	Icon
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_icon
MaxLength	1024
RequiredLevel	None
Type	String

msdyn_macroconnectorId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Macro Connector
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_macroconnectorid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_prefix

Property	Value
Description	Sets the prefix value
DisplayName	Prefix
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_prefix
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_title

Property	Value
Description	The title displayed on the desginer for this connector
DisplayName	Title
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_title
MaxLength	100
RequiredLevel	None
Type	String

msdyn_type

Property	Value
Description	The type of this connector
DisplayName	Type
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_type
MaxLength	100
RequiredLevel	None
Type	String

msdyn_webresourcename

Property	Value
Description	Unique identifier for webresource name
DisplayName	Webresource Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_webresourcename
MaxLength	100
RequiredLevel	None
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Macro Connector
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Macro Connector
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_executioncontext

Property	Value
Description	Stores execution JSON for the macro
DisplayName	Execution data
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_executioncontext
MaxLength	1000000
RequiredLevel	None
Type	Memo

msdyn_macroname

Property	Value
Description	Lookup field for the macro for which the session is created
DisplayName	Macro name
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_macroname
RequiredLevel	None
Targets	workflow
Type	Lookup

msdyn_macrosessionId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Macro Run History ID
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_macrosessionid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_name

Property	Value
Description	The name of the custom entity.

Property	Value
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	None
Type	String

msdyn_status

Property	Value
Description	Stores whether macro succeeded or failed
DisplayName	Macro status
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_status
MaxLength	100
RequiredLevel	None
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	User
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the macrosrunhistory
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the macrosrunhistory
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None

Property	Value
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

Property	Value
Description	Yomi name of the owner
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridyominame
MaxLength	100
RequiredLevel	SystemRequired
Type	String

OwningBusinessUnit

Added by: Active Solution Solution

Property	Value

Property	Value
Description	Unique identifier for the business unit that owns the record
DisplayName	Owning Business Unit
IsValidForForm	False
IsValidForRead	True
LogicalName	owningbusinessunit
RequiredLevel	None
Targets	businessunit
Type	Lookup

OwningTeam

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the team that owns the record.
DisplayName	Owning Team
IsValidForForm	False
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the user that owns the record.
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser
Type	Lookup

msdyn_designerfallbackurl

Property	Value
Description	Sets designer fallback url
DisplayName	Designer Blob URL

Property	Value
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_designerfallbackurl
MaxLength	1024
RequiredLevel	None
Type	String

msdyn_designerurlconfigentity

Property	Value
Description	Sets the entity from which to read designer URL
DisplayName	Entity from which to read designer URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_designerurlconfigentity
MaxLength	1024
RequiredLevel	None
Type	String

msdyn_designerurlconfigentityattrib

Property	Value
Description	Sets the attributes of designer url config entity
DisplayName	Attribute from which to read designer URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_designerurlconfigentityattrib
MaxLength	1024
RequiredLevel	None
Type	String

msdyn_designerurlconfigentityid

Property	Value
Description	Sets the id from which to read designer URL
DisplayName	Record Id from which to read designer URL
FormatName	Text

Property	Value
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_designerurlconfigentityid
MaxLength	1024
RequiredLevel	None
Type	String

msdyn_designerurlconfigentityquery

Property	Value
Description	An oData query to retrieve record from which to read designer URL
DisplayName	An oData query to retrieve record from which to read designer URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_designerurlconfigentityquery
MaxLength	1024
RequiredLevel	None
Type	String

msdyn_designerurlrelativepath

Property	Value
Description	Sets the path to designer blob with designer URL
DisplayName	Relative path to designer blob within the designer URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_designerurlrelativepath
MaxLength	1024
RequiredLevel	None
Type	String

msdyn_macrosolutionconfigurationId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Macro Solution Configuration
IsValidForForm	False
IsValidForRead	True

Property	Value
IsValidForUpdate	False
LogicalName	msdyn_macrosolutionconfigurationid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_macrosversion

Property	Value
Description	Macro solution version
DisplayName	msdyn_macrosversion
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_macrosversion
MaxLength	100
RequiredLevel	None
Type	String

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_searchhint

Property	Value
Description	Sets the value for serach hint
DisplayName	Search Hint Text
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_searchhint

Property	Value
MaxLength	100
RequiredLevel	None
Type	String

msdyn_uservoicelink

Property	Value
Description	Sets the value for user voice link
DisplayName	User Voice Link
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_uservoicelink
MaxLength	1024
RequiredLevel	None
Type	String

msdyn_uservoicetext

Property	Value
Description	Sets the value for user voice text
DisplayName	User Voice Text
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_uservoicetext
MaxLength	100
RequiredLevel	None
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon

Property	Value
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Macro Solution Configuration
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Macro Solution Configuration
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647

Property	Value
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

msdyn_ocbotchannelregistrationId

Property	Value

Property	Value
Description	Unique identifier for entity instances
DisplayName	Bot Channel Registration
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_ocbotchannelregistrationid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_ocfbapplicationid

Added by: Omnichannel – Facebook Solution

Property	Value
Description	Related Facebook application
DisplayName	Facebook application
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocfbapplicationid
RequiredLevel	None
Targets	msdyn_ocfbapplication
Type	Lookup

msdyn_ocgbmagentaccount

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Google's Business Messages agent account id for the BCR
DisplayName	Google's Business Messages agent account id
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocgbmagentaccount
RequiredLevel	None
Targets	msdyn_ocgooglebusinessmessagesagentaccount
Type	Lookup

msdyn_ocgbmpartneraccount

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Google's Business Messages partner account id of the BCR
DisplayName	Google's Business Messages partner account id
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_ocgbmpartneraccount
RequiredLevel	None
Targets	msdyn_ocgooglebusinessmessagespartneraccount
Type	Lookup

msdyn_oclinechannelconfigid

Added by: Omnichannel – SocialChannels Solution

Property	Value
Description	Related Line Channel
DisplayName	Line Channel
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_oclinechannelconfigid
RequiredLevel	None
Targets	msdyn_oclinechannelconfig
Type	Lookup

msdyn_octeamschannelconfigid

Added by: Omnichannel - Teams Solution

Property	Value
Description	Related Teams Channel
DisplayName	Teams Channel
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_octeamschannelconfigid
RequiredLevel	None
Targets	msdyn_octeamschannelconfig
Type	Lookup

msdyn_securemsappsecret

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Bot channel registration secure client secret
DisplayName	Secure Client secret
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	msdyn_securemsappsecret
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_validationstatus

Added by: Omnichannel – SocialChannels Solution

Property	Value
Description	Microsoft app ID and secert Validation status
DisplayName	Validation status
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_validationstatus
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Bot Channel Registration
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Bot Channel Registration
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode

Property	Value
RequiredLevel	None
Type	Status

statuscode Choices/Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only columns/attributes

These columns/attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

msdyn_occustommessagingchannelId

Property	Value

Property	Value
Description	Unique identifier for entity instances
DisplayName	Custom Messaging Channel
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_occustommessagingchannelid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_ocwidgetlanguage

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	The language setting for the custom messaging channel
DisplayName	Custom messaging channel language
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocwidgetlanguage
RequiredLevel	ApplicationRequired
Targets	msdyn_oclanguage
Type	Lookup

msdyn_PostConversationSurvey

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Lookup to forms pro survey field
DisplayName	Survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurvey
RequiredLevel	None
Targets	msfp_survey
Type	Lookup

msdyn_PostConversationSurveyEnable

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	To enable or disable post conversation survey
DisplayName	Enable
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_postconversationsurveyenable
RequiredLevel	None
Type	Boolean

msdyn_PostConversationSurveyEnable Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_PostConversationSurveyMessageText

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Prefix text for survey link message that will be sent to the user.
DisplayName	Message
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymessagetext
MaxLength	200
RequiredLevel	None
Type	String

msdyn_PostConversationSurveyMode

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Mode of the survey to be sent
DisplayName	Survey Mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymode
RequiredLevel	None
Type	Picklist

msdyn_PostConversationSurveyMode Options

Value	Label
192350000	Insert survey in conversation

Value	Label
192350001	Send survey link to conversation

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

IsValidForForm	False
IsValidForRead	True
LogicalName	msdyn_postconversationsurveyname
MaxLength	450
RequiredLevel	None
Type	String

OwnerIdName

Added by: Active Solution Solution

Property	Value
Description	Name of the owner
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridname
MaxLength	100
RequiredLevel	SystemRequired
Type	String

OwnerIdYomiName

Added by: Active Solution Solution

Property	Value
Description	Yomi name of the owner
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridyominame
MaxLength	100
RequiredLevel	SystemRequired
Type	String

OwningBusinessUnit

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the business unit that owns the record
DisplayName	Owning Business Unit
IsValidForForm	False
IsValidForRead	True
LogicalName	owningbusinessunit
RequiredLevel	None
Targets	businessunit
Type	Lookup

OwningTeam

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the team that owns the record.
DisplayName	Owning Team
IsValidForForm	False
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the user that owns the record.
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser
Type	Lookup

VersionNumber

Added by: Active Solution Solution

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_enablefileattachmentsforagents

Property	Value
Description	Enable file attachments for agent of the Google's Business Messages agent account.
DisplayName	Enable file attachments for agent
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablefileattachmentsforagents
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_enablefileattachmentsforagents Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_enablefileattachmentsforcustomers

Property	Value
Description	Enable file attachments for customer of the Google's Business Messages agent account.
DisplayName	Enable file attachments for customer

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablefileattachmentsforcustomers
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_enablefileattachmentsforcustomers Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_googlebusinessmessagescallbackurl

Property	Value
Description	Google's Business Messages callback URL of the Google's Business Messages agent account.
DisplayName	Google's Business Messages callback URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_googlebusinessmessagescallbackurl
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_liveworkstreamid

Property	Value
Description	Live work stream ID of the Google's Business Messages agent account.
DisplayName	Live work stream ID
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamid
RequiredLevel	ApplicationRequired
Targets	msdyn_liveworkstream
Type	Lookup

msdyn_name

Property	Value
Description	The name of the custom entity.

Property	Value
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_ocgbmpartneraccount

Property	Value
Description	Google's Business Messages partner account ID of the agent account
DisplayName	Google's Business Messages partner account ID
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocgbmpartneraccount
RequiredLevel	ApplicationRequired
Targets	msdyn_ocgooglebusinessmessagespartneraccount
Type	Lookup

msdyn_ocgooglebusinessmessagesagentaccountId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Google's Business Messages agent account
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_ocgooglebusinessmessagesagentaccountid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_ocwidgetlanguage

Property	Value
Description	Widget language of the Google's Business Messages agent account.
DisplayName	Widget language
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocwidgetlanguage
RequiredLevel	ApplicationRequired

Property	Value
Targets	msdyn_oclanguage
Type	Lookup

msdyn_PostConversationSurvey

Property	Value
Description	Post conversation survey of the Google's Business Messages agent account.
DisplayName	Post conversation survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurvey
RequiredLevel	None
Targets	msfp_survey
Type	Lookup

msdyn_PostConversationSurveyBotSurvey

Property	Value
Description	Enable or disable bot survey
DisplayName	Bot Survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveybotsurvey
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_PostConversationSurveyBotSurvey Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_PostConversationSurveyBotSurveyMessageText

Property	Value
Description	Prefix text for survey link message that will be sent to the user.
DisplayName	Message
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveybotsurveymessagetext

Property	Value
MaxLength	200
RequiredLevel	None
Type	String

msdyn_PostConversationSurveyBotSurveyMode

Property	Value
Description	Mode of the survey to be sent
DisplayName	Survey Mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveybotsurveymode
RequiredLevel	None
Type	Picklist

msdyn_PostConversationSurveyBotSurveyMode Choices/Options

Value	Label
192350000	Insert survey in conversation
192350001	Send survey link to conversation

msdyn_PostConversationSurveyEnable

Property	Value
Description	Post conversation survey enable of the Google's Business Messages agent account.
DisplayName	Post conversation survey enable
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveyenable
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_PostConversationSurveyEnable Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_PostConversationSurveyMessageText

Property	Value
Description	Post conversation survey message text of the Google's Business Messages agent account.
DisplayName	Post conversation survey message text

Property	Value
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymessagetext
MaxLength	100
RequiredLevel	None
Type	String

msdyn_PostConversationSurveyMode

Property	Value
Description	Post conversation survey mode of the Google's Business Messages agent account.
DisplayName	Post conversation survey mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymode
RequiredLevel	None
Type	Picklist

msdyn_PostConversationSurveyMode Choices/Options

Value	Label
192350000	Insert survey in conversation
192350001	Send survey link to conversation

msdyn_PostConversationSurveySeparateBotSurvey

Property	Value
Description	Lookup to Dynamics 365 Customer Voice survey field
DisplayName	Survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveyseparatebotsurvey
RequiredLevel	None
Targets	msfp_survey
Type	Lookup

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On

Property	Value
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Google's Business Messages agent account
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode

Property	Value
RequiredLevel	SystemRequired
Type	State

statecode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Google's Business Messages agent account
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Choices/Options

Value	Label	State
1	Active	0

msdyn_channelaccesstoken

Property	Value
Description	Channel Access Token is of Line Channel
DisplayName	Channel Access Token
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_channelaccesstoken
MaxLength	1000
RequiredLevel	ApplicationRequired
Type	String

msdyn_channelid

Property	Value
Description	Channel ID of Line Channel
DisplayName	Channel ID
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_channelid
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_channelsecret

Property	Value
Description	Channel secret of the Line Channel
DisplayName	Channel Secret
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_channelsecret
MaxLength	225
RequiredLevel	ApplicationRequired
Type	String

msdyn_enablefileattachmentsforagents

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Enable file attachments for agents
DisplayName	Enable file attachments for agents
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablefileattachmentsforagents
RequiredLevel	None
Type	Boolean

msdyn_enablefileattachmentsforagents Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_enablefileattachmentsforcustomers

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Enable file attachments for customers
DisplayName	Enable file attachments for customers
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablefileattachmentsforcustomers
RequiredLevel	None
Type	Boolean

msdyn_enablefileattachmentsforcustomers Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_liveworkstreamid

Property	Value
Description	Work Stream
DisplayName	Work Stream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamid
RequiredLevel	ApplicationRequired

Property	Value
Targets	msdyn_liveworkstream
Type	Lookup

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_oclinechannelconfigId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Line Channel identifies Line Channel
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_oclinechannelconfigid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_ocwidgetlanguage

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	The language setting for the LINE account
DisplayName	LINE account language
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocwidgetlanguage
RequiredLevel	ApplicationRequired
Targets	msdyn_oclanguage
Type	Lookup

msdyn_PostConversationSurvey

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Lookup to Forms Pro survey field
DisplayName	Survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurvey
RequiredLevel	None
Targets	msfp_survey
Type	Lookup

msdyn_PostConversationSurveyEnable

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	To enable or disable post conversation survey
DisplayName	Enable
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveyenable
RequiredLevel	None
Type	Boolean

msdyn_PostConversationSurveyEnable Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_PostConversationSurveyMessageText

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Prefix text for survey link message that will be sent to the user.
DisplayName	Message
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymessagetext

Property	Value
MaxLength	200
RequiredLevel	None
Type	String

msdyn_PostConversationSurveyMode

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Mode of the survey to be sent
DisplayName	Survey Mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymode
RequiredLevel	None
Type	Picklist

msdyn_PostConversationSurveyMode Options

Value	Label
192350000	Insert survey in conversation
192350001	Send survey link to conversation

msdyn_webhookurl

Property	Value
Description	Webhook URL of Line Channel
DisplayName	Webhook URL
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_webhookurl
MaxLength	500
RequiredLevel	None
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly

Property	Value
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Line Channel
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired

Property	Value
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Line Channel
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code

Property	Value
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

msdyn_activeagentid

Property	Value
Description	Indicates the agent currently assigned to the conversation or last assigned agent for a closed conversation. It is populated as empty or null if the customer(C2) ends or is disconnected before the agent accepts conversation.
DisplayName	Active Agent
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_activeagentid
RequiredLevel	None
Targets	systemuser
Type	Lookup

msdyn_activesessionparticipantid

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	
DisplayName	Active session participant
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_activesessionparticipantid
RequiredLevel	None
Targets	msdyn_sessionparticipant
Type	Lookup

msdyn_cdsqueueid

Property	Value
Description	Unique identifier for Queue associated with Conversation.
DisplayName	Queue
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_cdsqueueid
RequiredLevel	None
Targets	queue
Type	Lookup

msdyn_channel

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	The channel(s) in the conversation.
DisplayName	Channel
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_channel
RequiredLevel	None
Type	MultiSelectPicklist

msdyn_channel Choices/Options

Value	Label
19241000	Microsoft Teams
192300000	WhatsApp
192310000	LINE
192320000	WeChat
192330000	Facebook
192340000	SMS
192350000	Entity Records
192350001	Twitter
192350002	Custom
192360000	Live chat
192370000	Voice
192380000	Video
192390000	Co-browse
192400000	Screen sharing
192440000	Voice call

msdyn_channelproviderName

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Channel Provider Name.
DisplayName	Channel Provider Name
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_channelproviderName
MaxLength	200

Property	Value
RequiredLevel	None
Type	Memo

msdyn_closedon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when conversation was closed
DisplayName	Closed On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_closedon
RequiredLevel	None
Type	DateTime

msdyn_ConversationSummaryField

Property	Value
Description	Field to bind conversation summary control
DisplayName	Conversation summary field
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_conversationsummaryfield
MaxLength	4000
RequiredLevel	None
Type	String

msdyn_createdon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when the activity was created.
DisplayName	Created On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_createdon
RequiredLevel	None
Type	DateTime

msdyn_customer

Property	Value
Description	Customer with which the activity is associated.
DisplayName	Customer
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_customer
RequiredLevel	None
Targets	account,contact
Type	Customer

msdyn_customerIdType

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	msdyn_customeridtype
RequiredLevel	None
Type	EntityName

msdyn_customerlanguageid

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	The language of the customer in this conversation.
DisplayName	Customer Language
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_customerlanguageid
RequiredLevel	None
Targets	msdyn_oclanguage
Type	Lookup

msdyn_customerlocale

Property	Value
Description	The locale of the customer participated in this conversation.
DisplayName	Customer Locale
FormatName	Text
IsLocalizable	False

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_customerlocale
MaxLength	100
RequiredLevel	None
Type	String

msdyn_customersentimentlabel

Property	Value
Description	Customer Sentiment Label powered by Sentiment Service
DisplayName	Customer Sentiment
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_customersentimentlabel
RequiredLevel	None
Type	Picklist

msdyn_customersentimentlabel Choices/Options

Value	Label
0	N/A
7	Very negative
8	Negative
9	Slightly negative
10	Neutral
11	Slightly positive
12	Positive
13	Very positive

msdyn_dailytopicid

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Look up to daily topic entity.
DisplayName	TopicID
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_dailytopicid
RequiredLevel	None
Targets	msdyn_ocsentimentdailytopic
Type	Lookup

msdyn_escalationcount

Property	Value
Description	Number of times conversation was escalated to Supervisor i.e. transferred to Supervisor
DisplayName	Escalation Count
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_escalationcount
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_initiatedon

Property	Value
DateTimeBehavior	UserLocal
Description	Time when conversation was initiated
DisplayName	Initiated On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_initiatedon
RequiredLevel	None
Type	DateTime

msdyn_isoutbound

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Indicates if its an outbound Conversation
DisplayName	Outbound Conversation
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_isoutbound
RequiredLevel	None
Type	Boolean

msdyn_isoutbound Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_IssueId

Added by: Omnichannel – Base for Dynamics 365 Applications Solution

Property	Value
Description	Unique identifier for Case associated with Conversation.
DisplayName	Issue
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_issueid
RequiredLevel	None
Targets	incident
Type	Lookup

msdyn_lastsessionid

Property	Value
Description	Last agent session
DisplayName	Last Session
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_lastsessionid
RequiredLevel	None
Targets	msdyn_ocsession
Type	Lookup

msdyn_liveworkstreamid

Property	Value
Description	Work stream associated to the conversation
DisplayName	Work stream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamid
RequiredLevel	None
Targets	msdyn_liveworkstream
Type	Lookup

msdyn_liveworkstreamnotificationdata

Property	Value
Description	LiveWorkStream notification data provided as JSON. For internal use only.
DisplayName	LiveWorkStream Notification Data
Format	TextArea

Property	Value
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamnotificationdata
MaxLength	8192
RequiredLevel	None
Type	Memo

msdyn_modifiedon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when conversation was last modified
DisplayName	Modified On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_modifiedon
RequiredLevel	None
Type	DateTime

msdyn_ocliveworkitemid

Property	Value
Description	Unique Id of conversation
DisplayName	ConversationId
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocliveworkitemid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_queueid

Property	Value
Description	Unique identifier for msdyn_omnichannelqueue associated with Conversation
DisplayName	Queue
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_queueid

Property	Value
RequiredLevel	None
Targets	msdyn_omnichannelqueue
Type	Lookup

msdyn_queueitemid

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Queue item associated with the conversation
DisplayName	Queue item
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_queueitemid
RequiredLevel	None
Targets	queueitem
Type	Lookup

msdyn_routableobjectid

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Unique identifier of the routed record. Records are of those entities enabled for Unified Routing and have at least one Workstream created. For internal use only.
DisplayName	Routed record
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_routableobjectid
RequiredLevel	None
Targets	task
Type	Lookup

msdyn_routableobjectidIdType

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	msdyn_routableobjectididtype
RequiredLevel	None
Type	EntityName

msdyn_socialprofileid

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Lookup for the Social Profile Entity Record.
DisplayName	Social Profile
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_socialprofileid
RequiredLevel	None
Targets	socialprofile
Type	Lookup

msdyn_startedon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when conversation was started
DisplayName	Started On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_startedon
RequiredLevel	None
Type	DateTime

msdyn_statusupdatedon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when conversation status was last modified
DisplayName	Status Updated On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_statusupdatedon
RequiredLevel	None
Type	DateTime

msdyn_thirdpartyconversation

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Third Party Conversation

Property	Value
DisplayName	Third Party Conversation
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_thirdpartyconversation
RequiredLevel	None
Type	Boolean

msdyn_thirdpartyconversation Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_TimelineControlField

Property	Value
Description	Field to bind Timelinewall control
DisplayName	Timeline Control Field
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_timelinecontrolfield
MaxLength	2000
RequiredLevel	None
Type	Memo

msdyn_title

Property	Value
Description	Conversation Title
DisplayName	Title
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_title
MaxLength	4000
RequiredLevel	None
Type	String

msdyn_TranscriptControl

Property	Value
Description	Placeholder for Transcript Control
DisplayName	Chat Transcript
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_transcriptcontrol
MaxLength	100
RequiredLevel	None
Type	String

msdyn_transfercount

Property	Value
Description	Number of times the conversation was transferred
DisplayName	Transfer Count
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_transfercount
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_workstreamworkdistributionmode

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Work distribution mode of the associated work stream
DisplayName	Work distribution mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_workstreamworkdistributionmode
RequiredLevel	None
Type	Picklist

msdyn_workstreamworkdistributionmode Choices/Options

Value	Label
192350000	Push
192350001	Pick

msdyn_wrapupinitiatedon

Added by: Omnichannel - Base Patch Solution

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when conversation end
DisplayName	Wrap-up Status Intiated On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_wrapupinitiatedon
RequiredLevel	None
Type	DateTime

OptionalAttendees

Added by: Active Solution Solution

Property	Value
Description	List of optional attendees for the activity.
DisplayName	Optional Attendees
IsValidForForm	True
IsValidForRead	True
LogicalName	optionalattendees
RequiredLevel	None
Targets	account,contact,entitlement,equipment,knowledgearticle,lead,queue,systemuser,unresolvedaddress
Type	PartyList

Organizer

Added by: Active Solution Solution

Property	Value
Description	Person who organized the activity.
DisplayName	Organizer
IsValidForForm	True
IsValidForRead	True
LogicalName	organizer
RequiredLevel	None
Targets	systemuser
Type	PartyList

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal

Property	Value
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the user or team who owns the activity.
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

Partners

Added by: Active Solution Solution

Property	Value
Description	Outsource vendor with which activity is associated.
DisplayName	Outsource Vendors
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	partners
RequiredLevel	None
Targets	account,contact
Type	PartyList

PriorityCode

Property	Value
Description	Priority of the activity.
DisplayName	Priority
IsValidForForm	True
IsValidForRead	True
LogicalName	prioritycode
RequiredLevel	None
Type	Picklist

PriorityCode Choices/Options

Value	Label
0	Low
1	Normal
2	High

ProcessId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the Process.
DisplayName	Process
IsValidForForm	False
IsValidForRead	True
LogicalName	processid
RequiredLevel	None
Type	Uniqueidentifier

RegardingObjectId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the object with which the activity is associated.
DisplayName	Regarding
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	regardingobjectid
RequiredLevel	None
Targets	account,adx_ad,adx_adplacement,adx_invitation,adx_poll,adx_polloption,adx_pollplacement,adx_pollsubmission,adx_publishingstatetransitionrule,adx_
Type	Lookup

RegardingObjectIdName

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjectidname
MaxLength	400
RequiredLevel	None
Type	String

RegardingObjectIdYomiName

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjectidyominame
MaxLength	400
RequiredLevel	None
Type	String

RegardingObjectTypeCode

Property	Value
Description	
DisplayName	

Property	Value
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjecttypecode
RequiredLevel	None
Type	EntityName

RequiredAttendees

Added by: Active Solution Solution

Property	Value
Description	List of required attendees for the activity.
DisplayName	Required Attendees
IsValidForForm	True
IsValidForRead	True
LogicalName	requiredattendees
RequiredLevel	None
Targets	account,contact,entitlement,equipment,knowledgearticle,lead,queue,systemuser,unresolvedaddress
Type	PartyList

Resources

Added by: Active Solution Solution

Property	Value
Description	Users or facility/equipment that are required for the activity.
DisplayName	Resources
IsValidForForm	True
IsValidForRead	True
LogicalName	resources
RequiredLevel	None
Targets	equipment,systemuser
Type	PartyList

ScheduledDurationMinutes

Property	Value
Description	Scheduled duration of the activity, specified in minutes.
DisplayName	Scheduled Duration
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduleddurationminutes
MaxValue	2147483647

Property	Value
MinValue	0
RequiredLevel	None
Type	Integer

ScheduledEnd

Property	Value
DateTimeBehavior	UserLocal
Description	Scheduled end time of the activity.
DisplayName	Due Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduledend
RequiredLevel	None
Type	DateTime

ScheduledStart

Property	Value
DateTimeBehavior	UserLocal
Description	Scheduled start time of the activity.
DisplayName	Start Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduledstart
RequiredLevel	None
Type	DateTime

ServiceId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of an associated service.
DisplayName	Service
IsValidForForm	False
IsValidForRead	True
LogicalName	serviceid
RequiredLevel	None
Targets	service
Type	Lookup

SLAId

Added by: Active Solution Solution

Property	Value
Description	Choose the service level agreement (SLA) that you want to apply to the case record.
DisplayName	SLA
IsValidForForm	True
IsValidForRead	True
LogicalName	slaid
RequiredLevel	None
Targets	sla
Type	Lookup

SortDate

Property	Value
DateTimeBehavior	UserLocal
Description	Shows the date and time by which the activities are sorted.
DisplayName	Sort Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	sortdate
RequiredLevel	None
Type	DateTime

StageId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the Stage.
DisplayName	Process Stage
IsValidForForm	False
IsValidForRead	True
LogicalName	stageid
RequiredLevel	None
Type	Uniqueidentifier

StateCode

Property	Value
Description	State of the conversation record
DisplayName	State
IsValidForCreate	False

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

StateCode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Open	1	Open
1	Closed	4	Closed
2	Resolved	6	Resolved
3	Scheduled	7	Scheduled
4	Wrap-up (Deprecated)	5	Wrap-up (Deprecated)

StatusCode

Property	Value
Description	Reason for the status of the activity.
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

StatusCode Choices/Options

Value	Label	State
1	Open	0
2	Active	0
3	Waiting	0
4	Closed	1
5	Wrap-up	0

7	Scheduled	3

Subject

Property	Value
Description	Subject associated with the activity.
DisplayName	Subject
FormatName	Text
IsLocalizable	False

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	subject
MaxLength	200
RequiredLevel	ApplicationRequired
Type	String

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

To

Added by: Active Solution Solution

Property	Value
Description	Person who is the receiver of the activity.
DisplayName	To
IsValidForForm	True
IsValidForRead	True
LogicalName	to
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

TransactionCurrencyId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the currency associated with the activitypointer.
DisplayName	Currency
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	transactioncurrencyid
RequiredLevel	None
Targets	transactioncurrency
Type	Lookup

TraversedPath

Added by: Active Solution Solution

Property	Value
Description	For internal use only.
DisplayName	Traversed Path
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	traversedpath
MaxLength	1250
RequiredLevel	None
Type	String

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

OwningTeam

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the team that owns the activity.
DisplayName	Owning Team
IsValidForForm	False
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the user that owns the activity.
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser
Type	Lookup

PostponeActivityProcessingUntil

Property	Value
DateTimeBehavior	UserLocal
Description	For internal use only.
DisplayName	Delay activity processing until
Format	DateAndTime
IsValidForForm	False
IsValidForRead	True
LogicalName	postponeactivityprocessinguntil
RequiredLevel	None
Type	DateTime

SenderMailboxId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the mailbox associated with the sender of the email message.
DisplayName	Sender's Mailbox
IsValidForForm	False

Property	Value
IsValidForRead	True
LogicalName	sendermailboxid
RequiredLevel	None
Targets	mailbox
Type	Lookup

SenderMailboxIdName

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	sendermailboxidname
MaxLength	100
RequiredLevel	None
Type	String

SentOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when the activity was sent.
DisplayName	Date Sent
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	senton
RequiredLevel	None
Type	DateTime

SeriesId

Property	Value
Description	Uniqueidentifier specifying the id of recurring series of an instance.
DisplayName	Series Id
IsValidForForm	False
IsValidForRead	True
LogicalName	seriesid

Property	Value
RequiredLevel	None
Type	Uniqueidentifier

ServiceIdName

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	serviceidname
MaxLength	100
RequiredLevel	SystemRequired
Type	String

SLAInvokedId

Added by: Active Solution Solution

Property	Value
Description	Last SLA that was applied to this case. This field is for internal use only.
DisplayName	Last SLA applied
IsValidForForm	False
IsValidForRead	True
LogicalName	slainvokedid
RequiredLevel	None
Targets	sla
Type	Lookup

msdyn_characteristic

Property	Value
Description	Characteristic linked to the conversation
DisplayName	Characteristic

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_characteristic
RequiredLevel	ApplicationRequired
Targets	characteristic
Type	Lookup

msdyn_characteristicsource

Added by: Omnichannel - SBR Patch Solution

Property	Value
Description	Option Set with different type of Source for the characteristic
DisplayName	Source
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_characteristicsource
RequiredLevel	None
Type	Picklist

msdyn_characteristicsource Options

Value	Label
321240000	Rule Based
321240001	ML Based
321240002	Manual

msdyn_confidence

Added by: Omnichannel - SBR Patch Solution

Property	Value
Description	Confidence of the characteristic attached to the liveweotkitem
DisplayName	Confidence
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_confidence
MaxValue	1000000000
MinValue	0
Precision	2
RequiredLevel	None
Type	Double

msdyn_createdon

Property	Value
DateTimeBehavior	UserLocal
Description	Created On
DisplayName	Created On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_createdon
RequiredLevel	None
Type	DateTime

msdyn_mlmodelid

Added by: Omnichannel - SBR Patch Solution

Property	Value
Description	ML Model Id which is used to attach this characteristic
DisplayName	Ml Model Id
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_mlmodelid
RequiredLevel	None
Targets	msdyn_aimodel
Type	Lookup

msdyn_modifiedon

Property	Value
DateTimeBehavior	UserLocal
Description	Last Modified On
DisplayName	Modified On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_modifiedon
RequiredLevel	None
Type	DateTime

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	None
Type	String

msdyn_ocliveworkitemcharacteristicId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Conversation Characteristic
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_ocliveworkitemcharacteristicid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_ocliveworkitemid

Property	Value
Description	Related Conversation
DisplayName	Conversation
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocliveworkitemid
RequiredLevel	ApplicationRequired
Targets	msdyn_ocliveworkitem
Type	Lookup

msdyn_ratingvalue

Property	Value
Description	Required rating value for the characteristic
DisplayName	Rating Value
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ratingvalue
RequiredLevel	None
Targets	ratingvalue
Type	Lookup

msdyn_skilladdedby

Added by: Omnichannel - SBR Patch Solution

Property	Value
Description	Look up to User who added this characteristic
DisplayName	Skill Added By
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_skilladdedby
RequiredLevel	None
Targets	systemuser
Type	Lookup

msdyn_status

Property	Value
Description	Status of the characteristic associated to the conversation
DisplayName	Status
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_status
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_status Options

Value	Label
192350000	Active
192350001	Deleted

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Conversation Characteristic
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value

Property	Value
Description	Reason for the status of the Conversation Characteristic
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

msdyn_ocliveworkitemcontextitem Entity Reference

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Stores context item values for an engagement.

Added by: Omnichannel – Base Solution

ActivityAdditionalParams

Property	Value
Description	Additional information provided by the external application as JSON. For internal use only.
DisplayName	Activity Additional Parameters
Format	TextArea
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	activityadditionalparams
MaxLength	8192
RequiredLevel	None
Type	Memo

ActivityId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the activity.
DisplayName	Activity
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	activityid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

ActualDurationMinutes

Property	Value
Description	Actual duration of the activity in minutes.
DisplayName	Actual Duration
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	actualdurationminutes

Property	Value
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

ActualEnd

Property	Value
DateTimeBehavior	UserLocal
Description	Actual end time of the activity.
DisplayName	Actual End
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	actualend
RequiredLevel	None
Type	DateTime

ActualStart

Property	Value
DateTimeBehavior	UserLocal
Description	Actual start time of the activity.
DisplayName	Actual Start
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	actualstart
RequiredLevel	None
Type	DateTime

BCC

Added by: Active Solution Solution

Property	Value
Description	Blind Carbon-copy (bcc) recipients of the activity.
DisplayName	BCC
IsValidForForm	True
IsValidForRead	True
LogicalName	bcc
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

CC

Added by: Active Solution Solution

Property	Value
Description	Carbon-copy (cc) recipients of the activity.
DisplayName	CC
IsValidForForm	True
IsValidForRead	True
LogicalName	cc
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

Community

Property	Value
Description	Shows how contact about the social activity originated, such as from Twitter or Facebook. This field is read-only.
DisplayName	Social Channel
IsValidForForm	False
IsValidForRead	True
LogicalName	community
RequiredLevel	None
Type	Picklist

Community Options

Value	Label
0	Other

Customers

Added by: Active Solution Solution

Property	Value
Description	Customer with which the activity is associated.
DisplayName	Customers
IsValidForForm	True
IsValidForRead	True
LogicalName	customers
RequiredLevel	None
Targets	account,contact
Type	PartyList

DeliveryPriorityCode

Property	Value
Description	Priority of delivery of the activity to the email server.
DisplayName	Delivery Priority
IsValidForForm	True
IsValidForRead	True
IsValidForUpdate	False
LogicalName	deliveryprioritycode
RequiredLevel	None
Type	Picklist

DeliveryPriorityCode Options

Value	Label
0	Low
1	Normal
2	High

Description

Property	Value
Description	Description of the activity.
DisplayName	Description
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	description
MaxLength	2000
RequiredLevel	None

Property	Value
Type	Memo

ExchangeItemId

Property	Value
Description	The message id of activity which is returned from Exchange Server.
DisplayName	Exchange Item ID
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	exchangeitemid
MaxLength	200
RequiredLevel	None
Type	String

ExchangeWebLink

Property	Value
Description	Shows the web link of Activity of type email.
DisplayName	Exchange WebLink
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	exchangeweblink
MaxLength	1250
RequiredLevel	None
Type	String

From

Added by: Active Solution Solution

Property	Value
Description	Person who the activity is from.
DisplayName	From
IsValidForForm	True
IsValidForRead	True
LogicalName	from
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

IsBilled

Property	Value
Description	Information regarding whether the activity was billed as part of resolving a case.
DisplayName	Is Billed
IsValidForForm	False
IsValidForRead	True
LogicalName	isbilled
RequiredLevel	None
Type	Boolean

IsBilled Options

Value	Label
1	Yes
0	No

DefaultValue: False

IsMapiPrivate

Property	Value
Description	For internal use only.
DisplayName	Is Private
IsValidForForm	False
IsValidForRead	True
LogicalName	ismapiprivate
RequiredLevel	None
Type	Boolean

IsMapiPrivate Options

Value	Label
1	Yes
0	No

DefaultValue: False

IsWorkflowCreated

Property	Value
Description	Information regarding whether the activity was created from a workflow rule.
DisplayName	Is Workflow Created
IsValidForForm	False
IsValidForRead	True
LogicalName	isworkflowcreated
RequiredLevel	None
Type	Boolean

IsWorkflowCreated Options

Value	Label
1	Yes
0	No

DefaultValue: False

LastOnHoldTime

Added by: Active Solution Solution

Property	Value
DateTimeBehavior	UserLocal
Description	Contains the date and time stamp of the last on hold time.
DisplayName	Last On Hold Time
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	lastonholdtime
RequiredLevel	None
Type	DateTime

LeftVoiceMail

Property	Value
Description	Left the voice mail
DisplayName	Left Voice Mail
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	leftvoicemail
RequiredLevel	None
Type	Boolean

LeftVoiceMail Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_occhannelprovidername

Property	Value
Description	Channel Provider Name.
DisplayName	Channel Provider Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_occhannelprovidername
MaxLength	100
RequiredLevel	None
Type	String

msdyn_occhanneltype

Property	Value
Description	The channel(s) in the conversation.
DisplayName	Channel Type
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_occhanneltype
RequiredLevel	None
Type	MultiSelectPicklist

msdyn_occhanneltype Options

Value	Label
19241000	Microsoft Teams
192300000	WhatsApp

msdyn_occustomerlocale

Property	Value
Description	Customer preferred locale
DisplayName	Customer locale
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_occustomerlocale
RequiredLevel	None
Targets	msdyn_oclanguage
Type	Lookup

msdyn_ocliveworkstreamid

Property	Value
Description	Work stream associated to the conversation
DisplayName	Live Work Stream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocliveworkstreamid
RequiredLevel	None
Targets	msdyn_liveworkstream
Type	Lookup

msdyn_ocmessagetext

Property	Value
Description	Message text.
DisplayName	Message text
FormatName	Text
IsLocalizable	False
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_ocmessagetext
MaxLength	2000
RequiredLevel	None
Type	String

msdyn_ocmessagetype

Property	Value
Description	Message type
DisplayName	Type
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocmessagetype
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_ocmessagetype Options

Value	Label
100000000	Create conversation when customer responds
100000001	Create conversation on send

msdyn_ocoutboundconfiguration

Property	Value
Description	Associated Outbound Configuration.
DisplayName	Outbound Configuration
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocoutboundconfiguration
RequiredLevel	ApplicationRequired
Targets	msdyn_ocoutboundconfiguration
Type	Lookup

msdyn_ocReceiverChannelId

Property	Value
Description	This can be an SMS number, Facebook page id, etc.
DisplayName	Receiver channel ID
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	msdyn_ocreceiverchannelid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_ocsenderChannelId

Property	Value
Description	This can be an SMS number, Facebook page id, etc.
DisplayName	Sender channel ID
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocsenderchannelid
MaxLength	100
RequiredLevel	None
Type	String

OptionalAttendees

Added by: Active Solution Solution

Property	Value
Description	List of optional attendees for the activity.
DisplayName	Optional Attendees
IsValidForForm	True
IsValidForRead	True
LogicalName	optionalattendees
RequiredLevel	None
Targets	account,contact,entitlement,equipment,knowledgearticle,lead,queue,systemuser,unresolvedaddress
Type	PartyList

Organizer

Added by: Active Solution Solution

Property	Value
Description	Person who organized the activity.
DisplayName	Organizer
IsValidForForm	True
IsValidForRead	True
LogicalName	organizer
RequiredLevel	None

Property	Value
Targets	systemuser
Type	PartyList

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the user or team who owns the activity.
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

Partners

Added by: Active Solution Solution

Property	Value
Description	Outsource vendor with which activity is associated.
DisplayName	Outsource Vendors
IsValidForForm	True
IsValidForRead	True
LogicalName	partners
RequiredLevel	None
Targets	account,contact
Type	PartyList

PriorityCode

Property	Value
Description	Priority of the activity.
DisplayName	Priority
IsValidForForm	True
IsValidForRead	True
LogicalName	prioritycode
RequiredLevel	None
Type	Picklist

PriorityCode Options

Value	Label
0	Low
1	Normal
2	High

ProcessId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the Process.
DisplayName	Process
IsValidForForm	False
IsValidForRead	True
LogicalName	processid
RequiredLevel	None
Type	Uniqueidentifier

RegardingObjectId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the object with which the activity is associated.
DisplayName	Regarding
IsValidForForm	True
IsValidForRead	True
LogicalName	regardingobjectid
RequiredLevel	None
Targets	account,adx_ad,adx_adplacement,adx_casedeflection,adx_communityforumaccesspermission,adx_communityforumalert,adx_contentaccesslevel,adx_ir
Type	Lookup

RegardingObjectIdName

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjectidname
MaxLength	400
RequiredLevel	None
Type	String

RegardingObjectIdYomiName

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjectidyominame
MaxLength	400
RequiredLevel	None
Type	String

RegardingObjectTypeCode

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjecttypecode
RequiredLevel	None
Type	EntityName

RequiredAttendees

Added by: Active Solution Solution

Property	Value
Description	List of required attendees for the activity.
DisplayName	Required Attendees
IsValidForForm	True
IsValidForRead	True
LogicalName	requiredattendees
RequiredLevel	None
Targets	account,contact,entitlement,equipment,knowledgearticle,lead,queue,systemuser,unresolvedaddress
Type	PartyList

Resources

Added by: Active Solution Solution

Property	Value
Description	Users or facility/equipment that are required for the activity.
DisplayName	Resources
IsValidForForm	True
IsValidForRead	True
LogicalName	resources
RequiredLevel	None
Targets	equipment,systemuser
Type	PartyList

ScheduledDurationMinutes

Property	Value
Description	Scheduled duration of the activity, specified in minutes.
DisplayName	Scheduled Duration
Format	Duration
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	scheduledurationminutes
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

ScheduledEnd

Property	Value
DateTimeBehavior	UserLocal
Description	Scheduled end time of the activity.
DisplayName	Due Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduledend
RequiredLevel	None
Type	DateTime

ScheduledStart

Property	Value
DateTimeBehavior	UserLocal
Description	Scheduled start time of the activity.
DisplayName	Start Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduledstart
RequiredLevel	None
Type	DateTime

ServiceId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of an associated service.
DisplayName	Service
IsValidForForm	False
IsValidForRead	True
LogicalName	serviceid
RequiredLevel	None
Targets	service

Property	Value
Type	Lookup

SLAId

Added by: Active Solution Solution

Property	Value
Description	Choose the service level agreement (SLA) that you want to apply to the case record.
DisplayName	SLA
IsValidForForm	True
IsValidForRead	True
LogicalName	slaid
RequiredLevel	None
Targets	sla
Type	Lookup

SortDate

Property	Value
DateTimeBehavior	UserLocal
Description	Shows the date and time by which the activities are sorted.
DisplayName	Sort Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	sortdate
RequiredLevel	None
Type	DateTime

StageId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the Stage.
DisplayName	(Deprecated) Process Stage
IsValidForForm	False
IsValidForRead	True
LogicalName	stageid
RequiredLevel	None
Type	Uniqueidentifier

StateCode

Property	Value

Property	Value
Description	Status of the activity.
DisplayName	Activity Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

StateCode Options

Value	Label	DefaultStatus	InvariantName
0	Open	1	Open
1	Completed	2	Completed
2	Canceled	3	Canceled
3	Scheduled	4	Scheduled

StatusCode

Property	Value
Description	Reason for the status of the activity.
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

StatusCode Options

Value	Label	State
1	Open	0
2	Completed	1
3	Canceled	2
4	Scheduled	3

Subject

Property	Value
Description	Subject associated with the activity.
DisplayName	Subject
FormatName	Text
IsLocalizable	False
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	subject
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

To

Added by: Active Solution Solution

Property	Value
Description	Person who is the receiver of the activity.
DisplayName	To
IsValidForForm	True
IsValidForRead	True
LogicalName	to
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

TransactionCurrencyId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the currency associated with the activitypointer.
DisplayName	Currency
IsValidForForm	True
IsValidForRead	True
LogicalName	transactioncurrencyid

Property	Value
RequiredLevel	None
Targets	transactioncurrency
Type	Lookup

TraversedPath

Added by: Active Solution Solution

Property	Value
Description	For internal use only.
DisplayName	(Deprecated) Traversed Path
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	traversedpath
MaxLength	1250
RequiredLevel	None
Type	String

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_liveworkitemid

Property	Value
Description	Unique Identifier of Conversation associated to the recording
DisplayName	Conversation
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkitemid
RequiredLevel	None
Targets	msdyn_ocliveworkitem
Type	Lookup

msdyn_mediauri

Property	Value
Description	Media URI associated to the recording
DisplayName	Media URI
FormatName	Url
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_mediauri
MaxLength	500
RequiredLevel	None
Type	String

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_ocrecordingId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Recording
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_ocrecordingid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_sourcelanguage

Property	Value
Description	Language of recording source
DisplayName	Source Language
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_sourcelanguage
RequiredLevel	None
Targets	msdyn_oclanguage
Type	Lookup

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Recording
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active

Value	Label	DefaultStatus	InvariantName
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Recording
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Choices/Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None

Property	Value
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only columns/attributes

These columns/attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

msdyn_ocrequest Entity Reference

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Entity to store Requests across Omnichannel.

Added by: Omnichannel – Base Solution

IsValidForRead	True
LogicalName	msdyn_dailytopicid
RequiredLevel	ApplicationRequired
Targets	msdyn_ocsentimentdailytopic
Type	Lookup

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_ocsentimentdailytopictrendingId

Property	Value
Description	Topic mapping id for sentiment trend
DisplayName	Topic mapping id
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_ocsentimentdailytopictrendingid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_similarityscore

Property	Value

Property	Value
Description	The cosine similarity score between the base topic and daily topic
DisplayName	Similarity score
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_similarityscore
MaxValue	100
MinValue	-100
Precision	3
RequiredLevel	ApplicationRequired
Type	Double

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False

LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Sentiment daily topic trending
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Sentiment daily topic trending
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

Property	Value
DateTimeBehavior	UserLocal
Description	Actual end time of the activity.
DisplayName	Actual End
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	actualend
RequiredLevel	None
Type	DateTime

ActualStart

Property	Value
DateTimeBehavior	UserLocal
Description	Actual start time of the activity.
DisplayName	Actual Start
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	actualstart
RequiredLevel	None
Type	DateTime

BCC

Added by: Active Solution Solution

Property	Value
Description	Blind Carbon-copy (bcc) recipients of the activity.
DisplayName	BCC
IsValidForForm	True
IsValidForRead	True
LogicalName	bcc
RequiredLevel	None
Targets	account,contact,lead,systemuser

Property	Value
Type	PartyList

CC

Added by: Active Solution Solution

Property	Value
Description	Carbon-copy (cc) recipients of the activity.
DisplayName	CC
IsValidForForm	True
IsValidForRead	True
LogicalName	cc
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

Community

Property	Value
Description	Shows how contact about the social activity originated, such as from Twitter or Facebook. This field is read-only.
DisplayName	Social Channel
IsValidForForm	False
IsValidForRead	True
LogicalName	community
RequiredLevel	None
Type	Picklist

Community Choices/Options

Value	Label

ExchangeItemId

Property	Value
Description	The message id of activity which is returned from Exchange Server.
DisplayName	Exchange Item ID
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	exchangeitemid
MaxLength	200
RequiredLevel	None
Type	String

ExchangeWebLink

Property	Value
Description	Shows the web link of Activity of type email.
DisplayName	Exchange WebLink
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	exchangeweblink
MaxLength	1250
RequiredLevel	None
Type	String

From

Added by: Active Solution Solution

Property	Value
Description	Person who the activity is from.
DisplayName	From
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	from
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

IsBilled

Property	Value
Description	Information regarding whether the activity was billed as part of resolving a case.
DisplayName	Is Billed
IsValidForForm	False
IsValidForRead	True
LogicalName	isbilled
RequiredLevel	None
Type	Boolean

IsBilled Choices/Options

Type	String

msdyn_sessionmodifiedon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when session was last modified
DisplayName	Session Modified On
Format	DateOnly
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_sessionmodifiedon
RequiredLevel	None
Type	DateTime

msdyn_state

Property	Value
Description	(Deprecated)
DisplayName	State
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_state
RequiredLevel	None
Type	Picklist

msdyn_state Choices/Options

Value	Label
192350000	Default
192350001	Active
192350002	Closed
192350003	New

OptionalAttendees

Added by: Active Solution Solution

Property	Value
Description	List of optional attendees for the activity.
DisplayName	Optional Attendees
IsValidForForm	True
IsValidForRead	True
LogicalName	optionalattendees
RequiredLevel	None
Targets	account,contact,entitlement,equipment,knowledgearticle,lead,msdyn_salessuggestion,queue,systemuser,unresolvedaddress
Type	PartyList

Organizer

Added by: Active Solution Solution

Property	Value
Description	Person who organized the activity.
DisplayName	Organizer
IsValidForForm	True
IsValidForRead	True
LogicalName	organizer
RequiredLevel	None
Targets	systemuser
Type	PartyList

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the user or team who owns the activity.
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

Partners

Added by: Active Solution Solution

Property	Value
Description	Outsource vendor with which activity is associated.

Property	Value
DisplayName	Outsource Vendors
IsValidForForm	True
IsValidForRead	True
LogicalName	partners
RequiredLevel	None
Targets	account,contact
Type	PartyList

PriorityCode

Property	Value
Description	Priority of the activity.
DisplayName	Priority
IsValidForForm	True
IsValidForRead	True
LogicalName	prioritycode
RequiredLevel	None
Type	Picklist

PriorityCode Choices/Options

Value	Label
0	Low
1	Normal
2	High

ProcessId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the Process.
DisplayName	Process
IsValidForForm	False
IsValidForRead	True
LogicalName	processid
RequiredLevel	None
Type	Uniqueidentifier

RegardingObjectId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the object with which the activity is associated.

Property	Value
DisplayName	Regarding
IsValidForForm	True
IsValidForRead	True
LogicalName	regardingobjectid
RequiredLevel	None
Targets	account,adx_ad,adx_adplacement,adx_invitation,adx_poll,adx_polloption,adx_pollplacement,adx_pollsubmission,adx_publishingstatetransitionrule,adx_
Type	Lookup

RegardingObjectIdName

RegardingObjectTypeCode

Added by: Active Solution Solution

Property	Value
Description	

Property	Value
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	regardingobjecttypecode
RequiredLevel	None
Type	EntityName

RequiredAttendees

Added by: Active Solution Solution

Property	Value
Description	List of required attendees for the activity.
DisplayName	Required Attendees
IsValidForForm	True
IsValidForRead	True
LogicalName	requiredattendees
RequiredLevel	None
Targets	account,contact,entitlement,equipment,knowledgearticle,lead,msdyn_salessuggestion,queue,systemuser,unresolvedaddress
Type	PartyList

Resources

Added by: Active Solution Solution

Property	Value
Description	Users or facility/equipment that are required for the activity.
DisplayName	Resources
IsValidForForm	True
IsValidForRead	True
LogicalName	resources
RequiredLevel	None
Targets	equipment,systemuser
Type	PartyList

ScheduledDurationMinutes

Property	Value
Description	Scheduled duration of the activity, specified in minutes.
DisplayName	Scheduled Duration
Format	Duration
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduledurationminutes
MaxValue	2147483647

Property	Value
MinValue	0
RequiredLevel	None
Type	Integer

ScheduledEnd

Property	Value
DateTimeBehavior	UserLocal
Description	Scheduled end time of the activity.
DisplayName	Due Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduledend
RequiredLevel	None
Type	DateTime

ScheduledStart

Property	Value
DateTimeBehavior	UserLocal
Description	Scheduled start time of the activity.
DisplayName	Start Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	scheduledstart
RequiredLevel	None
Type	DateTime

ServiceId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of an associated service.
DisplayName	Service
IsValidForForm	False
IsValidForRead	True
LogicalName	serviceid
RequiredLevel	None
Targets	service
Type	Lookup

SLAId

Added by: Active Solution Solution

Property	Value
Description	Choose the service level agreement (SLA) that you want to apply to the case record.
DisplayName	SLA
IsValidForForm	True
IsValidForRead	True
LogicalName	slaid
RequiredLevel	None
Targets	sla
Type	Lookup

SortDate

Property	Value
DateTimeBehavior	UserLocal
Description	Shows the date and time by which the activities are sorted.
DisplayName	Sort Date
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	sortdate
RequiredLevel	None
Type	DateTime

StageId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the Stage.
DisplayName	Process Stage
IsValidForForm	False
IsValidForRead	True
LogicalName	stageid
RequiredLevel	None
Type	Uniqueidentifier

StateCode

Property	Value
Description	Status of the activity.
DisplayName	Activity Status
IsValidForCreate	False

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

StateCode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Open	1	Open
1	Completed	2	Completed
2	Canceled	3	Canceled
3	Scheduled	4	Scheduled

StatusCode

Property	Value
Description	Reason for the status of the activity.
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

StatusCode Choices/Options

Value	Label	State
1	Open	0
2	Completed	1
3	Canceled	2
4	Scheduled	3

Subject

Property	Value
Description	Subject associated with the activity.
DisplayName	Subject
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	subject
MaxLength	200

Property	Value
RequiredLevel	ApplicationRequired
Type	String

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

To

Added by: Active Solution Solution

Property	Value
Description	Person who is the receiver of the activity.
DisplayName	To
IsValidForForm	True
IsValidForRead	True
LogicalName	to
RequiredLevel	None
Targets	account,contact,lead,systemuser
Type	PartyList

TransactionCurrencyId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the currency associated with the activitypointer.
DisplayName	Currency
IsValidForForm	True
IsValidForRead	True
LogicalName	transactioncurrencyid
RequiredLevel	None
Targets	transactioncurrency
Type	Lookup

TraversedPath

Added by: Active Solution Solution

Property	Value
Description	For internal use only.
DisplayName	Traversed Path
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	traversedpath
MaxLength	1250
RequiredLevel	None
Type	String

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the team that owns the activity.
DisplayName	Owning Team
IsValidForForm	False
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the user that owns the activity.
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser

Property	Value
Type	Lookup

PostponeActivityProcessingUntil

Property	Value
DateTimeBehavior	UserLocal
Description	For internal use only.
DisplayName	Delay activity processing until
Format	DateAndTime
IsValidForForm	False
IsValidForRead	True
LogicalName	postponeactivityprocessinguntil
RequiredLevel	None
Type	DateTime

SenderMailboxId

Added by: Active Solution Solution

Property	Value
Description	Unique identifier of the mailbox associated with the sender of the email message.
DisplayName	Sender's Mailbox
IsValidForForm	False
IsValidForRead	True
LogicalName	sendermailboxid
RequiredLevel	None
Targets	mailbox
Type	Lookup

SenderMailboxIdName

Added by: Active Solution Solution

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name

Property	Value
MaxLength	100
RequiredLevel	None
Type	String

msdyn_ocliveworkitemcharacteristic

Property	Value
Description	Associated Conversation Characteristic
DisplayName	Conversation Characteristic
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocliveworkitemcharacteristic
RequiredLevel	ApplicationRequired
Targets	msdyn_ocliveworkitemcharacteristic
Type	Lookup

msdyn_ocsession

Property	Value
Description	Associated session
DisplayName	Session
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocsession
RequiredLevel	ApplicationRequired
Targets	msdyn_ocsession
Type	Lookup

msdyn_ocsessioncharacteristicId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Session Characteristic
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_ocsessioncharacteristicid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal

Property	Value
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Session Characteristic
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Session Characteristic
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text

Property	Value
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_ocsessionsentimentId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Session Sentiment
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_ocsessionsentimentid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_omnichannelsession

Property	Value
Description	Session id mapping to the ocsession entity.
DisplayName	Session Id
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_omnichannelsession
RequiredLevel	ApplicationRequired
Targets	msdyn_ocsession
Type	Lookup

msdyn_predictedlanguage

Property	Value
Description	The language predicted by the AI model
DisplayName	Predicted language
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_predictedlanguage

Property	Value
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_sentimentmodelversion

Property	Value
Description	The version of the model that was used to calculate the sentiment score
DisplayName	Sentiment Model Version
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_sentimentmodelversion
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_sentimentpulse

Property	Value
Description	Sentiment score of the interaction ranging from 0 (very negative) to 100 (very positive).
DisplayName	Sentiment Pulse
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_sentimentpulse
MaxValue	100
MinValue	0
Precision	2
RequiredLevel	ApplicationRequired
Type	Double

msdyn_sentimenttransition

Property	Value
Description	The difference in the sentiment of the end zone of the session and the beginning zone of the session.
DisplayName	Sentiment Transition
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_sentimenttransition
MaxValue	100
MinValue	-100

Property	Value
Precision	2
RequiredLevel	ApplicationRequired
Type	Double

msdyn_sentimentzone

Property	Value
Description	The categorical value generated from "Sentiment Pulse" using specific cut-off points. There are three categories: “Positive”, “Neutral”, “Negative”.
DisplayName	Sentiment Zone
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_sentimentzone
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid

Property	Value
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Session Sentiment
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Session Sentiment
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None

Property	Value
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

msdyn_ocsystemmessage Entity Reference

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Stores the system messages sent to the message receiver for various events.

Added by: Omnichannel – Base Solution

Messages

Message	Web API Operation	SDK Assembly
Create	POST [*org URI*]/api/data/v9.1/msdyn_ocsystemmessages See Create	CreateRequest or Create
Delete	DELETE [*org URI*]/api/data/v9.1/msdyn_ocsystemmessages(*msdyn_ocsystemmessageid*) See Delete	DeleteRequest or Delete
IsValidStateTransition	IsValidStateTransition Function	IsValidStateTransitionRequest
Retrieve	GET [*org URI*]/api/data/v9.1/msdyn_ocsystemmessages(*msdyn_ocsystemmessageid*) See Retrieve	RetrieveRequest or Retrieve
RetrieveMultiple	GET [*org URI*]/api/data/v9.1/msdyn_ocsystemmessages See Query Data	RetrieveMultipleRequest or RetrieveMultiple
SetState	PATCH [*org URI*]/api/data/v9.1/msdyn_ocsystemmessages(*msdyn_ocsystemmessageid*) Update `statecode` and `statuscode` properties.	SetStateRequest
Update	PATCH [*org URI*]/api/data/v9.1/msdyn_ocsystemmessages(*msdyn_ocsystemmessageid*) See Update	UpdateRequest or Update

192350032	CustomerAverageWaitTime_HoursAndMinutes
192350033	SecondaryChannelEnded

msdyn_widgetid

Added by: Omnichannel - Chat Patch Solution

Property	Value
Description	Unique identifier for Chat Widget associated with System Message.
DisplayName	Widget
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_widgetid
RequiredLevel	None
Targets	msdyn_livechatconfig
Type	Lookup

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On

Property	Value
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

statecode

Property	Value
Description	Status of the System Message
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the System Message
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode

Property	Value
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1

Property	Value
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_botid

Property	Value
Description	Bot ID is of Teams Channel
DisplayName	Bot ID

Property	Value
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_botid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_enablefileattachmentsforagents

Added by: Omnichannel - Teams Patch Solution

Property	Value
Description	Option set to enable or disable attachments for agents
DisplayName	Enable file attachments for agents
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablefileattachmentsforagents
RequiredLevel	None
Type	Boolean

msdyn_enablefileattachmentsforagents Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_enablefileattachmentsforcustomers

Added by: Omnichannel - Teams Patch Solution

Property	Value
Description	Option set to enable or disable attachments for customers
DisplayName	Enable file attachments for customers
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_enablefileattachmentsforcustomers
RequiredLevel	None
Type	Boolean

msdyn_enablefileattachmentsforcustomers Options

Value	Label

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_liveworkstreamid

Property	Value
Description	Work Stream
DisplayName	Work Stream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamid
RequiredLevel	ApplicationRequired
Targets	msdyn_liveworkstream
Type	Lookup

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	None
Type	String

msdyn_octeamschannelconfigId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Teams Channel
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_octeamschannelconfigid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_ocwidgetlanguage

Added by: Omnichannel - Teams Patch Solution

Property	Value
Description	The language setting for the Teams account
DisplayName	Teams account language
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocwidgetlanguage
RequiredLevel	ApplicationRequired
Targets	msdyn_oclanguage
Type	Lookup

msdyn_PostConversationSurvey

Added by: Omnichannel - Teams Patch Solution

Property	Value
Description	Lookup to Forms Pro survey field
DisplayName	Survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurvey
RequiredLevel	None
Targets	msfp_survey
Type	Lookup

msdyn_PostConversationSurveyEnable

Added by: Omnichannel - Teams Patch Solution

Property	Value
Description	To enable or disable post conversation survey
DisplayName	Enable
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveyenable
RequiredLevel	None
Type	Boolean

msdyn_PostConversationSurveyEnable Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_PostConversationSurveyMessageText

Added by: Omnichannel - Teams Patch Solution

Property	Value
Description	Prefix text for survey link message that will be sent to the user.
DisplayName	Message
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymessagetext
MaxLength	200
RequiredLevel	None
Type	String

msdyn_PostConversationSurveyMode

Added by: Omnichannel - Teams Patch Solution

Property	Value
Description	Mode of the survey to be sent
DisplayName	Survey Mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymode
RequiredLevel	None
Type	Picklist

msdyn_PostConversationSurveyMode Options

Value	Label
192350000	Insert survey in conversation
192350001	Send survey link to conversation

msdyn_teamsappname

Property	Value
Description	Teams App Name or Teams Channel
DisplayName	Teams App Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_teamsappname
MaxLength	100
RequiredLevel	ApplicationRequired

Property	Value
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Teams Channel
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Teams Channel
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None

Property	Value
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

WeChat accounts for Omnichannel integration

msdyn_securetoken

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Secure Token of WeChat Channel
DisplayName	Secure Token
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_securetoken
MaxLength	1000
RequiredLevel	ApplicationRequired
Type	String

msdyn_serviceaccount

Property	Value
Description	Original ID of WeChat Channel
DisplayName	Original ID

Property	Value
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_serviceaccount
MaxLength	255
RequiredLevel	ApplicationRequired
Type	String

msdyn_token

Property	Value
Description	Token of WeChat Channel
DisplayName	Token
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_token
MaxLength	1000
RequiredLevel	ApplicationRequired
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the WeChat Channel
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the WeChat Channel
DisplayName	Status Reason
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Choices/Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only columns/attributes

These columns/attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

0	No

DefaultValue: False

msdyn_liveworkstreamid

Property	Value
Description	Work stream of WhatsApp number
DisplayName	Work stream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamid
RequiredLevel	ApplicationRequired
Targets	msdyn_liveworkstream

Property	Value
Type	Lookup

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_ocwhatsappaccountid

Property	Value
Description	Identity of associated WhatsApp account
DisplayName	WhatsApp account
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocwhatsappaccountid
RequiredLevel	ApplicationRequired
Targets	msdyn_ocwhatsappchannelaccount
Type	Lookup

msdyn_ocwhatsappchannelnumberId

Property	Value
Description	Unique identifier for WhatsApp entity instances
DisplayName	WhatsApp number
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_ocwhatsappchannelnumberid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_ocwidgetlanguage

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	The language setting for the WhatsApp number
DisplayName	WhatsApp number language
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocwidgetlanguage
RequiredLevel	ApplicationRequired
Targets	msdyn_oclanguage
Type	Lookup

msdyn_organizationphonenumber

Property	Value
Description	Phone number for a WhatsApp account
DisplayName	Phone number
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_organizationphonenumber
MaxLength	100
RequiredLevel	SystemRequired
Type	String

msdyn_PostConversationSurvey

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Lookup to Forms Pro survey field
DisplayName	Survey
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurvey
RequiredLevel	None
Targets	msfp_survey
Type	Lookup

msdyn_PostConversationSurveyEnable

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	To enable or disable post conversation survey
DisplayName	Enable

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveyenable
RequiredLevel	None
Type	Boolean

msdyn_PostConversationSurveyEnable Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_PostConversationSurveyMessageText

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Prefix text for survey link message that will be sent to the user.
DisplayName	Message
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymessagetext
MaxLength	200
RequiredLevel	None
Type	String

msdyn_PostConversationSurveyMode

Added by: Omnichannel - SocialChannels Patch Solution

Property	Value
Description	Mode of the survey to be sent
DisplayName	Survey Mode
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_postconversationsurveymode
RequiredLevel	None
Type	Picklist

msdyn_PostConversationSurveyMode Options

Value	Label

Value	Label
192350000	Insert survey in conversation
192350001	Send survey link to conversation

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the WhatsApp number
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the WhatsApp number
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None

Property	Value
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

msdyn_operatinghourId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Operating Hour
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_operatinghourid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_starttimestring

Property	Value
Description	Enter time in 24-hour format (HH:mm).
DisplayName	Start time
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_starttimestring
MaxLength	10

Property	Value
RequiredLevel	None
Type	String

msdyn_Timezone

Property	Value
Description	Time zone code
DisplayName	Time zone
Format	TimeZone
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_timezone
MaxValue	1500
MinValue	-1500
RequiredLevel	None
Type	Integer

msdyn_Totalworkhours

Property	Value
Description	Total work hours
DisplayName	Total work hours
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_totalworkhours
MaxLength	100
RequiredLevel	None
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False

Property	Value
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Operating hour
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Operating hour
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

OwningBusinessUnit

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the business unit that owns the record
DisplayName	Owning Business Unit
IsValidForForm	False
IsValidForRead	True
LogicalName	owningbusinessunit
RequiredLevel	None
Targets	businessunit
Type	Lookup

OwningTeam

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the team that owns the record.
DisplayName	Owning Team
IsValidForForm	False
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the user that owns the record.

Property	Value
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser
Type	Lookup

VersionNumber

Added by: Active Solution Solution

Property	Value
Description	Version Number
DisplayName	Version Number
IsValidForForm	False
IsValidForRead	True

msdyn_questionsequenceId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Survey Question Sequence
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_questionsequenceid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_SurveyQuestion

Property	Value
Description	Name of the survey question
DisplayName	Survey question name
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_surveyquestion
RequiredLevel	ApplicationRequired
Targets	msdyn_surveyquestion
Type	Lookup

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

SequenceNumber

Property	Value
Description	Sequence number for questions to display in the specified order
DisplayName	Order

Property	Value
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	sequencenumber
MaxValue	2147483647
MinValue	0
RequiredLevel	ApplicationRequired
Type	Integer

statecode

Property	Value
Description	Status of the Survey question sequence
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Survey question sequence
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0

Value	Label	State
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

msdyn_entityrecordid

Property	Value
Description	Unique identifier of the record to be routed to Omnichannel.
DisplayName	entityrecordid
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_entityrecordid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_entitysetname

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	entitysetname of the entity being routed.
DisplayName	entitysetname
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_entitysetname
MaxLength	100
RequiredLevel	None
Type	String

msdyn_queueid

Property	Value
Description	Unique identifier of the queue.
DisplayName	queueid
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_queueid
MaxLength	100
RequiredLevel	Recommended
Type	String

msdyn_queueitemid

Property	Value
Description	Unique identifier of the queue item.
DisplayName	queueitemid
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_queueitemid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_relationshipnamewithliveworkitem

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Name that tells the relationship of the Entity with Live Work Item
DisplayName	RelationshipNameWithLiveWorkItem
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	msdyn_relationshipnamewithliveworkitem
MaxLength	400
RequiredLevel	Recommended
Type	String

msdyn_routingrequestId

Property	Value
Description	Unique identifier for entity instances
DisplayName	RoutingRequest
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_routingrequestid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_routingrequesttitle

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Primary display name value of the record.
DisplayName	Title
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_routingrequesttitle
MaxLength	200
RequiredLevel	Recommended
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the RoutingRequest
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the RoutingRequest
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False

DisplayName	Type
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_type
RequiredLevel	None
Type	Boolean

msdyn_Type Options

Value	Label
1	Notification
0	Session

DefaultValue: True

msdyn_WorkStreamId

Added by: Omnichannel for Customer Service Patch Solution

Property	Value
Description	Unique identifier for Work Stream associated with Scenario.

Property	Value
DisplayName	WorkStream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_workstreamid
RequiredLevel	None
Targets	msdyn_liveworkstream
Type	Lookup

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_condition

Property	Value
Description	The Skill Attachment Rule's Condition
DisplayName	Condition
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	msdyn_condition
MaxLength	10000
RequiredLevel	None
Type	Memo

msdyn_description

Property	Value
Description	The Skill Attachment Rule's Description
DisplayName	Description
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_description
MaxLength	100
RequiredLevel	None
Type	String

msdyn_expression

Property	Value
Description	The Skill Attachment Rule's Expression
DisplayName	Expression
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_expression
MaxLength	10000
RequiredLevel	None
Type	Memo

msdyn_liveworkstream

Property	Value
Description	Unique identifier for Work Stream associated with Skill Attachment Rule.
DisplayName	Work Stream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstream
RequiredLevel	ApplicationRequired
Targets	msdyn_liveworkstream

Property	Value
Type	Lookup

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_rulejson

Property	Value
Description	The Skill Attachment Rule's output
DisplayName	Rule Json
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_rulejson
MaxLength	10000
RequiredLevel	None
Type	Memo

msdyn_skillattachmentruleitemId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Skill Attachment Rule
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_skillattachmentruleitemid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Skill Attachment Rule
DisplayName	Status
IsValidForCreate	False

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Skill Attachment Rule
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

OwningBusinessUnit

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the business unit that owns the record
DisplayName	Owning Business Unit
IsValidForForm	False
IsValidForRead	True
LogicalName	owningbusinessunit
RequiredLevel	None
Targets	businessunit
Type	Lookup

OwningTeam

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the team that owns the record.
DisplayName	Owning Team
IsValidForForm	False
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the user that owns the record.

Property	Value
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser
Type	Lookup

Description	Is this the default record? To be used for OOB settings.
DisplayName	Is default record
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_isdefaultrecord
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_isdefaultrecord Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_linkchannel

Property	Value
Description	Which channel is this sound record for?
DisplayName	Link to channel
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_linkchannel
MaxLength	100
RequiredLevel	None
Type	String

msdyn_linksoundfile

Property	Value
Description	Use this field to link the sound file with the sound setting record
DisplayName	Link sound file
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_linksoundfile
RequiredLevel	None
Targets	msdyn_soundfile
Type	Lookup

msdyn_loopsound

Property	Value
Description	Use this field to play the sound till notification timeout. For incoming message, set it to No.
DisplayName	Loop Sound
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_loopsound
RequiredLevel	None
Type	Boolean

msdyn_loopsound Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_Name

Property	Value
Description	Required name field
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_soundnotificationsettingId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Sound notification setting
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_soundnotificationsettingid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_volume

Property	Value
Description	Volume for the corresponding channel
DisplayName	Volume
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_volume
MaxValue	100
MinValue	0
RequiredLevel	ApplicationRequired
Type	Integer

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id

Property	Value
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Sound notification setting
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Sound notification setting
DisplayName	Status Reason

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

msdyn_soundnotificationsetting_SyncErrors

Added by: System Solution Solution

Same as syncerror entity msdyn_soundnotificationsetting_SyncErrors Many-To-One relationship.

Property	Value
ReferencingEntity	syncerror
ReferencingAttribute	regardingobjectid
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	msdyn_soundnotificationsetting_SyncErrors
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Details Label: Order:
CascadeConfiguration	Assign: NoCascade Delete: Cascade Merge: NoCascade Reparent: NoCascade Share: NoCascade Unshare: NoCascade

msdyn_soundnotificationsetting_DuplicateMatchingRecord

Added by: System Solution Solution

Same as duplicaterecord entity msdyn_soundnotificationsetting_DuplicateMatchingRecord Many-To-One relationship.

Property	Value
ReferencingEntity	duplicaterecord
ReferencingAttribute	duplicaterecordid

Property	Value
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	msdyn_soundnotificationsetting_DuplicateMatchingRecord
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Details Label: Order:
CascadeConfiguration	Assign: NoCascade Delete: Cascade Merge: NoCascade Reparent: NoCascade Share: NoCascade Unshare: NoCascade

msdyn_soundnotificationsetting_DuplicateBaseRecord

Added by: System Solution Solution

Same as duplicaterecord entity msdyn_soundnotificationsetting_DuplicateBaseRecord Many-To-One relationship.

Property	Value
ReferencingEntity	duplicaterecord
ReferencingAttribute	baserecordid
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	msdyn_soundnotificationsetting_DuplicateBaseRecord
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Details Label: Order:
CascadeConfiguration	Assign: NoCascade Delete: Cascade Merge: NoCascade Reparent: NoCascade Share: NoCascade Unshare: NoCascade

msdyn_soundnotificationsetting_AsyncOperations

Added by: System Solution Solution

Same as asyncoperation entity msdyn_soundnotificationsetting_AsyncOperations Many-To-One relationship.

Property	Value
ReferencingEntity	asyncoperation
ReferencingAttribute	regardingobjectid
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	msdyn_soundnotificationsetting_AsyncOperations
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Details Label: Order:

Property	Value
CascadeConfiguration	Assign: NoCascade Delete: NoCascade Merge: NoCascade Reparent: NoCascade Share: NoCascade Unshare: NoCascade

msdyn_soundnotificationsetting_MailboxTrackingFolders

Added by: System Solution Solution

Same as mailboxtrackingfolder entity msdyn_soundnotificationsetting_MailboxTrackingFolders Many-To-One relationship.

Property	Value
ReferencingEntity	mailboxtrackingfolder
ReferencingAttribute	regardingobjectid
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	msdyn_soundnotificationsetting_MailboxTrackingFolders
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Details Label: Order:
CascadeConfiguration	Assign: NoCascade Delete: Cascade Merge: NoCascade Reparent: NoCascade Share: NoCascade Unshare: NoCascade

msdyn_soundnotificationsetting_ProcessSession

Added by: System Solution Solution

Same as processsession entity msdyn_soundnotificationsetting_ProcessSession Many-To-One relationship.

Property	Value
ReferencingEntity	processsession
ReferencingAttribute	regardingobjectid
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	msdyn_soundnotificationsetting_ProcessSession
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Details Label: Order:
CascadeConfiguration	Assign: NoCascade Delete: NoCascade Merge: NoCascade Reparent: NoCascade Share: NoCascade Unshare: NoCascade

msdyn_soundnotificationsetting_BulkDeleteFailures

Added by: System Solution Solution

Same as bulkdeletefailure entity msdyn_soundnotificationsetting_BulkDeleteFailures Many-To-One relationship.

Property	Value
ReferencingEntity	bulkdeletefailure
ReferencingAttribute	regardingobjectid
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	msdyn_soundnotificationsetting_BulkDeleteFailures
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Details Label: Order:
CascadeConfiguration	Assign: NoCascade Delete: Cascade Merge: NoCascade Reparent: NoCascade Share: NoCascade Unshare: NoCascade

msdyn_soundnotificationsetting_PrincipalObjectAttributeAccesses

Added by: System Solution Solution

Same as principalobjectattributeaccess entity msdyn_soundnotificationsetting_PrincipalObjectAttributeAccesses Many-To-One relationship.

Property	Value
ReferencingEntity	principalobjectattributeaccess
ReferencingAttribute	objectid
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	msdyn_soundnotificationsetting_PrincipalObjectAttributeAccesses
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Details Label: Order:
CascadeConfiguration	Assign: NoCascade Delete: Cascade Merge: NoCascade Reparent: NoCascade Share: NoCascade Unshare: NoCascade

msdyn_soundnotificationsetting_Annotations

Added by: System Solution Solution

Same as annotation entity msdyn_soundnotificationsetting_Annotations Many-To-One relationship.

Property	Value
ReferencingEntity	annotation
ReferencingAttribute	objectid
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	msdyn_soundnotificationsetting_Annotations

Property	Value
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Details Label: Order:
CascadeConfiguration	Assign: Cascade Delete: Cascade Merge: NoCascade Reparent: Cascade Share: Cascade Unshare: Cascade

Many-To-One Relationships

Each Many-To-One relationship is defined by a corresponding One-To-Many relationship with the related entity. Listed by **SchemaName**.

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_AnswerType

Property	Value
Description	Type of survey answer
DisplayName	Answer type
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_answertype
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_AnswerType Options

Value	Label
192350000	Single line
192350001	Multiple lines
192350002	Option set
192350003	Rating
192350004	User Consent

msdyn_LiveWorkStreamToChatQuestion

Property	Value
Description	Unique identifier for Work stream associated with Chat Question.
DisplayName	Work stream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamtochatquestion
RequiredLevel	ApplicationRequired
Targets	msdyn_liveworkstream
Type	Lookup

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Question name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100

Property	Value
RequiredLevel	ApplicationRequired
Type	String

msdyn_PlaceholderText

Property	Value
Description	Help text for the survey question
DisplayName	Help Text
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_placeholdertext
MaxLength	100
RequiredLevel	None
Type	String

msdyn_QuestionText

Property	Value
Description	Question text
DisplayName	Question text
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_questiontext
MaxLength	512
RequiredLevel	ApplicationRequired
Type	String

msdyn_RatingScale

Property	Value
Description	Rating scale of the question
DisplayName	Rating Scale
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ratingscale

Property	Value
MaxValue	10
MinValue	2
RequiredLevel	None
Type	Integer

msdyn_surveyquestionId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Survey Question
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_surveyquestionid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid

Property	Value
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Survey Question
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Survey Question
DisplayName	Status Reason
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

ImportSequenceNumber

Property	Value
Description	Sequence number of the import that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_LiveWorkItemIdId

Property	Value
Description	LiveWorkItem this Transcript belongs to
DisplayName	LiveWorkItemId
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkitemidid
RequiredLevel	None
Targets	msdyn_ocliveworkitem
Type	Lookup

msdyn_name

Property	Value
Description	The name of the custom entity.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

msdyn_transcriptId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Transcript
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_transcriptid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Transcript
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Transcript
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number

Property	Value
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

Type	String

OwningBusinessUnit

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the business unit that owns the record
DisplayName	Owning Business Unit
IsValidForForm	False
IsValidForRead	True
LogicalName	owningbusinessunit
RequiredLevel	None
Targets	businessunit
Type	Lookup

OwningTeam

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the team that owns the record.
DisplayName	Owning Team
IsValidForForm	False
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Added by: Active Solution Solution

Property	Value
Description	Unique identifier for the user that owns the record.
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser
Type	Lookup

VersionNumber

Added by: Active Solution Solution

Property	Value
Description	Version Number
DisplayName	Version Number
IsValidForForm	False
IsValidForRead	True
LogicalName	versionnumber
MaxValue	9223372036854775807
MinValue	-9223372036854775808
RequiredLevel	None

Property	Value
Type	BigInt

Many-To-One Relationships

Each Many-To-One relationship is defined by a corresponding One-To-Many relationship with the related entity. Listed by **SchemaName**.

DisplayName	Sequence Number
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_sequencenumber
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_startedon

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when the rule execution was started.
DisplayName	Started On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_startedon
RequiredLevel	None
Type	DateTime

msdyn_targetobject

Property	Value
Description	Unique identifier for the target object associated with unifiedroutingdiagnostic.
DisplayName	Target Object
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_targetobject
RequiredLevel	None
Targets	adx_inviteredemption,email,incident,msdyn_ocliveworkitem,queueitem
Type	Lookup

msdyn_targetobjectIdType

Added by: Active Solution Solution

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	msdyn_targetobjectidtype
RequiredLevel	None
Type	EntityName

msdyn_unifiedroutingdiagnosticId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Unified Routing Diagnostic
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_unifiedroutingdiagnosticid

Property	Value
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_unifiedroutingrunid

Property	Value
Description	Unique identifier for Unified routing run associated with Unified routing diagnostic.
DisplayName	unified routing run wrapper
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_unifiedroutingrunid
RequiredLevel	None
Targets	msdyn_unifiedroutingrun
Type	Lookup

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value

RequiredLevel	None
Type	EntityName

msdyn_unifiedroutingrunId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Unified routing run
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_unifiedroutingrunid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

msdyn_workstream

Added by: Dynamics 365 UR OmnichanelBase Dependency Solution

Property	Value
Description	
DisplayName	Workstream

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_workstream
RequiredLevel	None
Targets	msdyn_liveworkstream
Type	Lookup

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Added by: Active Solution Solution

Property	Value
Description	Owner Id
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Added by: Active Solution Solution

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False

Property	Value
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

statecode

Property	Value
Description	Status of the Unified routing run
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

statecode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

statuscode

Property	Value
Description	Reason for the status of the Unified routing run
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

statuscode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Read-only attributes

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Stores each customer action as a record. The actions tracked are before an interaction is initiated. Agents will see the actions for an interaction in the Self Service section of the **Active Conversation** page, when enabled.

Added by: Omnichannel - Base Patch Solution

EntityImage

Property	Value
Description	The default image for the entity.
DisplayName	Entity Image
IsPrimaryImage	True
IsValidForForm	False
IsValidForRead	True
LogicalName	entityimage
MaxHeight	144
MaxWidth	144
RequiredLevel	None
Type	Image

IgnoreUnsolicitedEmail

Property	Value
Description	Information that specifies whether a queue is to ignore unsolicited email (deprecated).
DisplayName	Convert To Email Activities
IsValidForForm	True
IsValidForRead	True
LogicalName	ignoreunsolicitedemail
RequiredLevel	None
Type	Boolean

IgnoreUnsolicitedEmail Choices/Options

Value	Label
1	Only specific Emails
0	All incoming Emails

DefaultValue: False

ImportSequenceNumber

Property	Value
Description	Unique identifier of the data import or data migration that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

IncomingEmailDeliveryMethod

Property	Value
Description	Incoming email delivery method for the queue.
DisplayName	Incoming Email Delivery Method
IsValidForForm	True
IsValidForRead	True
LogicalName	incomingemaildeliverymethod
RequiredLevel	SystemRequired
Type	Picklist

IncomingEmailDeliveryMethod Choices/Options

Value	Label
0	None
2	Server-Side Synchronization or Email Router
3	Forward Mailbox

IncomingEmailFilteringMethod

Property	Value
Description	Convert Incoming Email To Activities
DisplayName	Convert Incoming Email To Activities
IsValidForForm	True
IsValidForRead	True
LogicalName	incomingemailfilteringmethod
RequiredLevel	SystemRequired
Type	Picklist

IncomingEmailFilteringMethod Choices/Options

Value	Label
0	All email messages
1	Email messages in response to Dynamics 365 email
2	Email messages from Dynamics 365 Leads, Contacts and Accounts
3	Email messages from Dynamics 365 records that are email enabled
4	No email messages

msdyn_assignmentinputcontractid

Added by: Dynamics 365 UR OmnichanelBase Dependency Solution

Property	Value
Description	Link assignment input contract with queue.
DisplayName	Assignment Input Contract Id
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_assignmentinputcontractid
RequiredLevel	None
Targets	msdyn_decisioncontract
Type	Lookup

msdyn_assignmentstrategy

Added by: Dynamics 365 UR OmnichanelBase Dependency Solution

Property	Value
Description	
DisplayName	Assignment Strategy
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_assignmentstrategy
RequiredLevel	None
Type	Picklist

msdyn_assignmentstrategy Choices/Options

Value	Label
192350000	Omnichannel Assignment
192350001	Round Robin
192350002	Custom Assignment Configuration

msdyn_isdefaultqueue

Added by: Omnichannel – Base Solution

Property	Value
Description	Shows whether the queue is set as default or not.
DisplayName	Is Default Queue
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_isdefaultqueue
RequiredLevel	None
Type	Boolean

msdyn_isdefaultqueue Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_isomnichannelqueue

Added by: Omnichannel – Base Solution

Property	Value
Description	Shows whether the queue is used as Omnichannel queue for work distribution.
DisplayName	Is Omnichannel queue
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_isomnichannelqueue
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_isomnichannelqueue Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_maxqueuesize

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Maximum queue size
DisplayName	Maximum queue size
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_maxqueuesize
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_operatinghourid

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Unique identifier for Operating hour associated with Queue
DisplayName	Operating Hours
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_operatinghourid
RequiredLevel	None
Targets	msdyn_operatinghour
Type	Lookup

msdyn_priority

Added by: Omnichannel – Base Solution

Property	Value
Description	Priority of the queue to indicate conversation assignment order to the agent.
DisplayName	Priority

Property	Value
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_priority
MaxValue	2147483647
MinValue	1
RequiredLevel	ApplicationRequired
Type	Integer

msdyn_queuetype

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Defines the type of channels handled by this queue
DisplayName	Queue type
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_queuetype
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_queuetype Choices/Options

Value	Label
192350000	Messaging
192350001	Entity
192350002	Voice

msdyn_uniquename

Added by: Omnichannel - Base Patch Solution

Property	Value

Property	Value
Description	Unique Name for the entity.
DisplayName	Unique Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_uniquename
MaxLength	128
RequiredLevel	None
Type	String

Name

Property	Value
Description	Name of the queue.
DisplayName	Name
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	name
MaxLength	200
RequiredLevel	ApplicationRequired
Type	String

OutgoingEmailDeliveryMethod

Property	Value
Description	Outgoing email delivery method for the queue.
DisplayName	Outgoing Email Delivery Method

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	outgoingemaildeliverymethod
RequiredLevel	SystemRequired
Type	Picklist

OutgoingEmailDeliveryMethod Choices/Options

Value	Label
0	None
2	Server-Side Synchronization or Email Router

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Property	Value
Description	Unique identifier of the user or team who owns the queue.
DisplayName	Owner
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdType

Property	Value
Description	
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

PrimaryUserId

Property	Value
Description	Unique identifier of the owner of the queue.
DisplayName	Owner (deprecated)
IsValidForForm	False
IsValidForRead	True
LogicalName	primaryuserid
RequiredLevel	None
Targets	systemuser
Type	Lookup

QueueId

Property	Value

Property	Value
Description	Unique identifier of the queue.
DisplayName	Queue
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	queueid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

QueueViewType

Property	Value
Description	Select whether the queue is public or private. A public queue can be viewed by all. A private queue can be viewed only by the members added to the queue.
DisplayName	Type
IsValidForForm	True
IsValidForRead	True
LogicalName	queueviewtype
RequiredLevel	SystemRequired
Type	Picklist

QueueViewType Choices/Options

Value	Label
0	Public
1	Private

StateCode

Property	Value
Description	Status of the queue.
DisplayName	Status

Property	Value
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

StateCode Choices/Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

StatusCode

Property	Value
Description	Reason for the status of the queue.
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	SystemRequired
Type	Status

StatusCode Choices/Options

Value	Label	State
1	Active	0
2	Inactive	1

TransactionCurrencyId

Property	Value

Property	Value
Description	Unique identifier of the currency associated with the queue.
DisplayName	Currency
IsValidForForm	True
IsValidForRead	True
LogicalName	transactioncurrencyid
RequiredLevel	None
Targets	transactioncurrency
Type	Lookup

Read-only columns/attributes

ImportSequenceNumber

Property	Value
Description	Unique identifier of the data import or data migration that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_liveworkstreamid

Added by: Dynamics 365 UR OmnichanelBase Dependency Solution

Property	Value
Description	Liveworkstream this queue item belongs to
DisplayName	Live workstream
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_liveworkstreamid
RequiredLevel	None
Targets	msdyn_liveworkstream
Type	Lookup

ObjectId

Property	Value
Description	Choose the activity, case, or article assigned to the queue.
DisplayName	Object
IsValidForForm	True
IsValidForRead	True
IsValidForUpdate	False
LogicalName	objectid
RequiredLevel	ApplicationRequired
Targets	activitypointer,adx_alertsubscription,adx_inviteredemption,adx_portalcomment,appointment,bulkoperation,campaignactivity,campaignresponse,em
Type	Lookup

ObjectIdTypeCode

Property	Value
Description	
DisplayName	Regarding Object Type
IsValidForForm	False

IsValidForUpdate	False
LogicalName	objectidtypecode
RequiredLevel	None
Type	EntityName

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

Priority

Property	Value
Description	Priority of the queue item.
DisplayName	Priority
Format	None
IsValidForForm	False

Property	Value
IsValidForRead	True
LogicalName	priority
MaxValue	1000000000
MinValue	0
RequiredLevel	None
Type	Integer

QueueId

Property	Value
Description	Choose the queue that the item is assigned to.
DisplayName	Queue
IsValidForForm	True
IsValidForRead	True
IsValidForUpdate	False
LogicalName	queueid
RequiredLevel	ApplicationRequired
Targets	queue
Type	Lookup

QueueItemId

Property	Value
Description	Unique identifier of the queue item.
DisplayName	Queue Item
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	queueitemid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

Sender

Property	Value
Description	Sender who created the queue item.
DisplayName	From
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	sender
MaxLength	250

Property	Value
RequiredLevel	None
Type	String

State

Property	Value
Description	Status of the queue item.
DisplayName	Status (deprecated)
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	state
MaxValue	1000000000
MinValue	0
RequiredLevel	None
Type	Integer

StateCode

Property	Value
Description	Shows whether the queue record is active or inactive. Inactive queue records are read-only and can't be edited unless they are reactivated.
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

StateCode Options

Value	Label	DefaultStatus	InvariantName
0	Active	1	Active
1	Inactive	2	Inactive

Status

Property	Value
Description	Reason for the status of the queue item.
DisplayName	Status Reason (deprecated)
Format	None
IsValidForForm	False
IsValidForRead	True

Property	Value
LogicalName	status
MaxValue	1000000000
MinValue	0
RequiredLevel	None
Type	Integer

StatusCode

Property	Value
Description	Select the item's status.
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	SystemRequired
Type	Status

StatusCode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

ToRecipients

Property	Value
Description	Recipients listed on the To line of the message for email queue items.
DisplayName	To
FormatName	Text
IsLocalizable	False

Property	Value
IsValidForForm	False
IsValidForRead	True
LogicalName	torecipients
MaxLength	500
RequiredLevel	None
Type	String

TransactionCurrencyId

Property	Value
Description	Choose the local currency for the record to make sure budgets are reported in the correct currency.
DisplayName	Currency
IsValidForForm	True
IsValidForRead	True
LogicalName	transactioncurrencyid
RequiredLevel	None
Targets	transactioncurrency
Type	Lookup

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

WorkerId

Property	Value
Description	Shows who is working on the queue item.
DisplayName	Worked By
IsValidForForm	True
IsValidForRead	True
LogicalName	workerid
RequiredLevel	None
Targets	systemuser,team

Property	Value
Type	Lookup

WorkerIdType

Property	Value
Description	
DisplayName	Worker Type
IsValidForForm	False
IsValidForRead	True
LogicalName	workeridtype
RequiredLevel	ApplicationRequired
Type	EntityName

Description

Property	Value
Description	Provide a description about the objective of the routing rule.

Property	Value
DisplayName	Description
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	description
MaxLength	2000
RequiredLevel	None
Type	Memo

msdyn_entitylogicalname

Added by: Entity records routing Solution

Property	Value
Description	Logical name of the entity (deprecated).
DisplayName	Entity (Deprecated)
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
IsValidForUpdate	False
LogicalName	msdyn_entitylogicalname
MaxLength	200
RequiredLevel	None
Type	String

Name

Property	Value
Description	Provide a name for the routing rule.
DisplayName	Name
FormatName	Text
IsLocalizable	False

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	name
MaxLength	100
RequiredLevel	ApplicationRequired
Type	String

OwnerId

Property	Value
Description	For internal use only.
DisplayName	Owner
IsValidForForm	True
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdName

Property	Value
Description	For internal use only.
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridname
MaxLength	100
RequiredLevel	SystemRequired
Type	String

OwnerIdType

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True

Type	EntityName

OwnerIdYomiName

Property	Value
Description	For internal use only
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridyominame
MaxLength	100
RequiredLevel	SystemRequired
Type	String

OwningBusinessUnit

Property	Value
Description	For internal use only
DisplayName	Owning Business Unit
IsValidForForm	False
IsValidForRead	True
LogicalName	owningbusinessunit
RequiredLevel	None
Targets	businessunit
Type	Lookup

OwningTeam

Property	Value
Description	Unique identifier for the team that owns the record.
DisplayName	Owning Team
IsValidForForm	False
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Property	Value
Description	Unique identifier for the user that owns the record.
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser
Type	Lookup

RoutingRuleId

Property	Value
Description	Unique identifier for entity instances
DisplayName	Routing Rule
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	routingruleid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

StateCode

Property	Value
Description	Status of the Routing Rule
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

StateCode Options

Value	Label	DefaultStatus	InvariantName
0	Draft	1	Draft
1	Active	2	Active

StatusCode

Property	Value
Description	Reason for the status of the Routing Rule
DisplayName	Status Reason
IsValidForForm	True
IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

StatusCode Options

Value	Label	State
1	Draft	0
2	Active	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	For internal use only.
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

TransactionCurrencyId

Property	Value
Description	Unique identifier of the currency associated with the Routing Rule.
DisplayName	Currency
IsValidForForm	True
IsValidForRead	True
LogicalName	transactioncurrencyid
RequiredLevel	None
Targets	transactioncurrency
Type	Lookup

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647

Property	Value
MinValue	-1
RequiredLevel	None
Type	Integer

WorkflowId

Property	Value
Description	Unique identifier for Workflow.
DisplayName	Workflow
IsValidForForm	True
IsValidForRead	True
LogicalName	workflowid
RequiredLevel	ApplicationRequired
Targets	workflow
Type	Lookup

WorkflowIdName

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	workflowidname
MaxLength	100
RequiredLevel	None
Type	String

Read-only attributes

These attributes return false for both **IsValidForCreate** or **IsValidForUpdate**. Listed by **SchemaName**.

SocialProfile Entity Reference

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This entity is used to store social profile information of its associated account and contacts on different social channels.

Messages

Message	Web API Operation	SDK Assembly
Assign	PATCH [*org URI*]/api/data/v9.0/socialprofiles(*socialprofileid*) Update `ownerid` property.	AssignRequest

Type	String

ImportSequenceNumber

Property	Value
Description	Unique identifier of the data import or data migration that created this record.
DisplayName	Import Sequence Number
Format	None
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	importsequencenumber
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

InfluenceScore

Property	Value
Description	Shows the score that determines the online social influence of the social profile.
DisplayName	Influence Score
IsValidForForm	True
IsValidForRead	True
LogicalName	influencescore
MaxValue	1000000000
MinValue	0
Precision	2
RequiredLevel	None
Type	Double

msdyn_ocfollowercount

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Customer's Followers on the Social channel.
DisplayName	Follower Count
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocfollowercount
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_ocfollowingcount

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Customer's followings on the Social channel
DisplayName	Followings Count
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_ocfollowingcount
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None

msdyn_ocfriendcount

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Customer's Friend count on the Social Channel
DisplayName	Friend Count
Format	None
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	msdyn_ocfriendcount
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	None
Type	Integer

msdyn_octwitterhandleid

Added by: Omnichannel – SocialChannels Solution

Property	Value
Description	Lookup for Twitter Handle entity.
DisplayName	Twitter Handle Id
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_octwitterhandleid
RequiredLevel	None
Targets	msdyn_octwitterhandle
Type	Lookup

msdyn_phonenumber

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	The phone number of the social profile.
DisplayName	Phone number
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_phonenumber
MaxLength	100
RequiredLevel	None
Type	String

msdyn_profileimagelink

Added by: Omnichannel - Base Patch Solution

Property	Value
Description	Link to the Customer's Social Channel Profile image.
DisplayName	Profile Image Link
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_profileimagelink
MaxLength	4000
RequiredLevel	None
Type	String

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

OwnerId

Property	Value
Description	Shows the user or team that is assigned to manage the record. This field is updated every time the record is assigned to a different user.
DisplayName	Owner
IsValidForForm	True

Property	Value
IsValidForRead	True
LogicalName	ownerid
RequiredLevel	SystemRequired
Targets	systemuser,team
Type	Owner

OwnerIdName

Property	Value
Description	Name of the owner
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForCreate	False
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridname
MaxLength	100
RequiredLevel	SystemRequired
Type	String

OwnerIdType

Property	Value
Description	Owner Id Type
DisplayName	
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridtype
RequiredLevel	SystemRequired
Type	EntityName

ProfileFullName

Property	Value

Property	Value
Description	Shows the display name of the customer on this social profile.
DisplayName	Full Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	profilefullname
MaxLength	160
RequiredLevel	None
Type	String

ProfileLink

Property	Value
Description	Shows the customer that this social profile belongs to.
DisplayName	Profile Link
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	profilelink
MaxLength	100
RequiredLevel	None
Type	String

ProfileName

Property	Value
Description	Shows the name of the social profile on the corresponding social channel.
DisplayName	Profile Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	profilename
MaxLength	100
RequiredLevel	None
Type	String

SocialProfileId

Property	Value
Description	Unique Identifier of the social profile name.
DisplayName	Social Profile ID
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	socialprofileid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

StateCode

Property	Value
Description	Status of the Social Profile
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	statecode
RequiredLevel	SystemRequired
Type	State

StateCode Options

Value	Label	DefaultStatus	InvariantName

IsValidForRead	True
LogicalName	statuscode
RequiredLevel	None
Type	Status

StatusCode Options

Value	Label	State
1	Active	0
2	Inactive	1

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

TransactionCurrencyId

Property	Value
Description	Choose the local currency for the record to make sure budgets are reported in the correct currency.
DisplayName	Currency

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	transactioncurrencyid
RequiredLevel	None
Targets	transactioncurrency
Type	Lookup

UniqueProfileID

Property	Value
Description	Unique ID of the Profile ID
DisplayName	Unique Profile ID
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	uniqueprofileid
MaxLength	100
RequiredLevel	None
Type	String

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

msdyn_octwitterhandleidName

Added by: Omnichannel – SocialChannels Solution

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	msdyn_octwitterhandleidname
MaxLength	100

Property	Value
RequiredLevel	None
Type	String

OwnerIdYomiName

Property	Value
Description	Yomi name of the owner
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	owneridyominame
MaxLength	100
RequiredLevel	SystemRequired
Type	String

OwningBusinessUnit

Property	Value
Description	Unique identifier for the business unit that owns the record
DisplayName	Owning Business Unit
IsValidForForm	False
IsValidForRead	True
LogicalName	owningbusinessunit
RequiredLevel	None
Targets	businessunit
Type	Lookup

OwningTeam

Property	Value
Description	Unique identifier of the team who owns the contact.
DisplayName	Owning Team
IsValidForForm	False

Property	Value
IsValidForRead	True
LogicalName	owningteam
RequiredLevel	None
Targets	team
Type	Lookup

OwningUser

Property	Value
Description	Unique identifier of the user who owns the contact.
DisplayName	Owning User
IsValidForForm	False
IsValidForRead	True
LogicalName	owninguser
RequiredLevel	None
Targets	systemuser
Type	Lookup

TransactionCurrencyIdName

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	transactioncurrencyidname
MaxLength	100
RequiredLevel	None
Type	String

VersionNumber

Property	Value

Property	Value
Description	Version number of the social profile.
DisplayName	Version Number
IsValidForForm	False
IsValidForRead	True
LogicalName	versionnumber
MaxValue	9223372036854775807
MinValue	-9223372036854775808
RequiredLevel	None
Type	BigInt

One-To-Many Relationships

Listed by **SchemaName**.

socialprofile_cases

Added by: Service Solution

Same as incident entity socialprofile_cases Many-To-One relationship.

Property	Value
ReferencingEntity	incident
ReferencingAttribute	socialprofileid
IsHierarchical	False
IsCustomizable	True
ReferencedEntityNavigationPropertyName	socialprofile_cases
AssociatedMenuConfiguration	Behavior: DoNotDisplay Group: Service Label: Order: 10
CascadeConfiguration	Assign: NoCascade Delete: RemoveLink Merge: NoCascade Reparent: NoCascade Share: NoCascade Unshare: NoCascade

Many-To-One Relationships

Each Many-To-One relationship is defined by a corresponding One-To-Many relationship with the related entity. Listed by **SchemaName**.

- lk_SocialProfile_createdonbehalfby
- socialProfile_owning_user
- lk_SocialProfile_modifiedonbehalfby

lk_SocialProfile_createdonbehalfby

See systemuser Entity lk_SocialProfile_createdonbehalfby One-To-Many relationship.

socialProfile_owning_user

See systemuser Entity socialProfile_owning_user One-To-Many relationship.

lk_SocialProfile_modifiedonbehalfby

See systemuser Entity lk_SocialProfile_modifiedonbehalfby One-To-Many relationship.

2	Server-Side Synchronization or Email Router
3	Forward Mailbox

InternalEMailAddress

Property	Value
Description	Internal email address for the user.
DisplayName	Primary Email
FormatName	Email
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	internalemailaddress
MaxLength	100
RequiredLevel	SystemRequired
Type	String

InviteStatusCode

Property	Value
Description	User invitation status.
DisplayName	Invitation Status
IsValidForForm	True
IsValidForRead	True
LogicalName	invitestatuscode

Property	Value
RequiredLevel	ApplicationRequired
Type	Picklist

InviteStatusCode Choices/Options

Value	Label
0	Invitation Not Sent
1	Invited
2	Invitation Near Expired
3	Invitation Expired
4	Invitation Accepted
5	Invitation Rejected
6	Invitation Revoked

IsDisabled

Property	Value
Description	Information about whether the user is enabled.
DisplayName	Status
IsValidForCreate	False
IsValidForForm	True
IsValidForRead	True
LogicalName	isdisabled
RequiredLevel	None
Type	Boolean

IsDisabled Choices/Options

Value	Label
1	Disabled
0	Enabled

DefaultValue: False

IsIntegrationUser

Property	Value
Description	Check if user is an integration user.
DisplayName	Integration user mode
IsValidForForm	True
IsValidForRead	True
LogicalName	isintegrationuser
RequiredLevel	SystemRequired
Type	Boolean

IsIntegrationUser Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

IsLicensed

Property	Value
Description	Information about whether the user is licensed.
DisplayName	User Licensed
IsValidForForm	True
IsValidForRead	True
LogicalName	islicensed
RequiredLevel	SystemRequired
Type	Boolean

IsLicensed Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

IsSyncWithDirectory

Property	Value
Description	Information about whether the user is synced with the directory.
DisplayName	User Synced
IsValidForForm	False
IsValidForRead	True
LogicalName	issyncwithdirectory
RequiredLevel	SystemRequired
Type	Boolean

IsSyncWithDirectory Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

JobTitle

Property	Value
Description	Job title of the user.
DisplayName	Job Title
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	jobtitle
MaxLength	100
RequiredLevel	None
Type	String

LastName

Property	Value
Description	Last name of the user.
DisplayName	Last Name

Property	Value
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	lastname
MaxLength	256
RequiredLevel	ApplicationRequired
Type	String

MiddleName

Property	Value
Description	Middle name of the user.
DisplayName	Middle Name
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	middlename
MaxLength	50
RequiredLevel	None
Type	String

MobileAlertEMail

Property	Value
Description	Mobile alert email address for the user.
DisplayName	Mobile Alert Email
FormatName	Email
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	mobilealertemail
MaxLength	100

Property	Value
RequiredLevel	None
Type	String

MobileOfflineProfileId

Property	Value
Description	Items contained with a particular SystemUser.
DisplayName	Mobile Offline Profile
IsValidForForm	False
IsValidForRead	True
LogicalName	mobileofflineprofileid
RequiredLevel	None
Targets	mobileofflineprofile
Type	Lookup

MobileOfflineProfileIdName

Property	Value
Description	
DisplayName	
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	mobileofflineprofileidname
MaxLength	100
RequiredLevel	None
Type	String

MobilePhone

Property	Value
Description	Mobile phone number for the user.
DisplayName	Mobile Phone
FormatName	Phone

Property	Value
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	mobilephone
MaxLength	64
RequiredLevel	None
Type	String

msdyn_AgentType

Added by: Omnichannel – Bot Enabler Solution

Property	Value
Description	Type of user - Application user or Bot application user
DisplayName	User type
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_agentType
RequiredLevel	None
Type	Picklist

msdyn_AgentType Choices/Options

Value	Label
192350000	Application user
192350001	Bot application user

msdyn_BotApplicationId

Added by: Omnichannel – Bot Enabler Solution

Property	Value
Description	Application ID of the bot.
DisplayName	Bot application ID
FormatName	Text
IsLocalizable	False

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_botapplicationid
MaxLength	100
RequiredLevel	None
Type	String

msdyn_BotDescription

Added by: Omnichannel – Base Solution

Property	Value
Description	BOT User Description
DisplayName	Description
Format	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_botdescription
MaxLength	2000
RequiredLevel	None
Type	Memo

msdyn_BotEndpoint

Added by: Omnichannel – Base Solution

Property	Value
Description	Bot User Endpoint
DisplayName	Endpoint
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_botendpoint

Property	Value
MaxLength	100
RequiredLevel	None
Type	String

msdyn_bothandle

Added by: Omnichannel - Bot Enabler Patch Solution

Property	Value
Description	Bot handle
DisplayName	Bot handle
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_bothandle
MaxLength	100
RequiredLevel	None
Type	String

msdyn_BotProvider

Added by: Omnichannel - Bot Enabler Patch Solution

Property	Value
Description	Indicates the type of bot
DisplayName	Bot Provider
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_botprovider
RequiredLevel	ApplicationRequired
Type	Picklist

msdyn_BotProvider Choices/Options

Value	Label

Value	Label
192350000	Virtual Agent
192350001	Other
192350002	None

msdyn_BotSecretKeys

Added by: Omnichannel – Base Solution

Property	Value
Description	Bot User Secret Keys
DisplayName	Secret Keys
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_botsecretkeys
MaxLength	100
RequiredLevel	None
Type	String

msdyn_Capacity

Added by: Omnichannel – Base Solution

Property	Value
Description	Capacity associated with the User.
DisplayName	Capacity
Format	None
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_capacity
MaxValue	2147483647
MinValue	0
RequiredLevel	None
Type	Integer

msdyn_cognitiveservicesregion

Added by: Omnichannel - Telephony Solution

Property	Value
Description	Cognitive Services Region
DisplayName	Cognitive Services Region
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_cognitiveservicesregion
MaxLength	100
RequiredLevel	None
Type	String

msdyn_cognitiveservicessubscriptionkey

Added by: Omnichannel - Telephony Solution

Property	Value
Description	Cognitive Services Subscription Key
DisplayName	Cognitive Services Subscription Key
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_cognitiveservicessubscriptionkey
MaxLength	100
RequiredLevel	None
Type	String

msdyn_DefaultPresenceIdUser

Added by: Omnichannel – Base Solution

Property	Value
Description	Unique identifier for Presence associated with User.

Property	Value
DisplayName	Default Presence
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_defaultpresenceiduser
RequiredLevel	None
Targets	msdyn_presence
Type	Lookup

msdyn_gdproptout

Added by: SI Common Solution

Property	Value
Description	Describes whether user is opted out or not
DisplayName	GDPR Optout
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_gdproptout
RequiredLevel	None
Type	Boolean

msdyn_gdproptout Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_gridwrappercontrolfield

Added by: Omnichannel - Skill Based Routing Solution

Property	Value
Description	Field to bind grid wrapper control
DisplayName	Grid Wrapper Control field
FormatName	Text

Property	Value
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_gridwrappercontrolfield
MaxLength	4000
RequiredLevel	None
Type	String

msdyn_isexpertenabledforswarm

Added by: swarming Solution

Property	Value
Description	Check if swarm is enabled for the experts.
DisplayName	Expert Enabled Swarm
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_isexpertenabledforswarm
RequiredLevel	ApplicationRequired
Type	Boolean

msdyn_isexpertenabledforswarm Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

msdyn_OwningEnvironmentId

Added by: Omnichannel - Bot Enabler Patch Solution

Property	Value
Description	Environment Id of the CDS environment that owns the bot user.
DisplayName	Owning Environment Id
FormatName	Text

Property	Value
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_owningenvironmentid
MaxLength	500
RequiredLevel	None
Type	String

msdyn_phonenumberid

Added by: Omnichannel - CommunicationBase Solution

Property	Value
Description	
DisplayName	Phone Number
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_phonenumberid
RequiredLevel	None
Targets	msdyn_ocphonenumber
Type	Lookup

msdyn_UserType

Added by: Omnichannel – Base Solution

Property	Value
Description	Type of user - CRM or BOT user
DisplayName	Type
IsValidForForm	True
IsValidForRead	True
LogicalName	msdyn_usertype
RequiredLevel	None
Type	Picklist

msdyn_UserType Choices/Options

Value	Label
192350000	CRM User
192350001	BOT User

NickName

Property	Value
Description	Nickname of the user.
DisplayName	Nickname
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	nickname
MaxLength	50
RequiredLevel	None
Type	String

OutgoingEmailDeliveryMethod

Property	Value
Description	Outgoing email delivery method for the user.
DisplayName	Outgoing Email Delivery Method
IsValidForForm	True
IsValidForRead	True
LogicalName	outgoingemaildeliverymethod
RequiredLevel	SystemRequired
Type	Picklist

OutgoingEmailDeliveryMethod Choices/Options

Value	Label
0	None
1	Microsoft Dynamics 365 for Outlook
2	Server-Side Synchronization or Email Router

OverriddenCreatedOn

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time that the record was migrated.
DisplayName	Record Created On
Format	DateOnly
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	overriddencreatedon
RequiredLevel	None
Type	DateTime

ParentSystemUserId

Property	Value
Description	Unique identifier of the manager of the user.
DisplayName	Manager
IsValidForForm	True
IsValidForRead	True
LogicalName	parentsystemuserid
RequiredLevel	None
Targets	systemuser
Type	Lookup

PassportHi

Property	Value
Description	For internal use only.
DisplayName	Passport Hi
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	passporthi

Property	Value
MaxValue	1000000000
MinValue	0
RequiredLevel	None
Type	Integer

PassportLo

Property	Value
Description	For internal use only.
DisplayName	Passport Lo
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	passportlo
MaxValue	1000000000
MinValue	0
RequiredLevel	None
Type	Integer

PersonalEMailAddress

Property	Value
Description	Personal email address of the user.
DisplayName	Email 2
FormatName	Email
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	personalemailaddress
MaxLength	100
RequiredLevel	None
Type	String

PhotoUrl

Property	Value
Description	URL for the Website on which a photo of the user is located.
DisplayName	Photo URL
FormatName	Url
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	photourl
MaxLength	200
RequiredLevel	None
Type	String

PositionId

Property	Value
Description	User's position in hierarchical security model.
DisplayName	Position
IsValidForForm	True
IsValidForRead	True
LogicalName	positionid
RequiredLevel	None
Targets	position
Type	Lookup

PreferredAddressCode

Property	Value
Description	Preferred address for the user.
DisplayName	Preferred Address
IsValidForForm	True
IsValidForRead	True
LogicalName	preferredaddresscode
RequiredLevel	None
Type	Picklist

PreferredAddressCode Choices/Options

Value	Label
1	Mailing Address
2	Other Address

PreferredEmailCode

Property	Value
Description	Preferred email address for the user.
DisplayName	Preferred Email
IsValidForForm	True
IsValidForRead	True
LogicalName	preferredemailcode
RequiredLevel	None
Type	Picklist

PreferredEmailCode Choices/Options

Value	Label
1	Default Value

PreferredPhoneCode

Property	Value
Description	Preferred phone number for the user.
DisplayName	Preferred Phone
IsValidForForm	True
IsValidForRead	True
LogicalName	preferredphonecode
RequiredLevel	None
Type	Picklist

PreferredPhoneCode Choices/Options

Value	Label
1	Main Phone

Value	Label
2	Other Phone
3	Home Phone
4	Mobile Phone
192350005	Omnichannel Phone

ProcessId

Property	Value
Description	Shows the ID of the process.
DisplayName	Process
IsValidForForm	False
IsValidForRead	True
LogicalName	processid
RequiredLevel	None
Type	Uniqueidentifier

QueueId

Property	Value
Description	Unique identifier of the default queue for the user.
DisplayName	Default Queue
IsValidForForm	False
IsValidForRead	True
LogicalName	queueid
RequiredLevel	None
Targets	queue
Type	Lookup

Salutation

Property	Value
Description	Salutation for correspondence with the user.
DisplayName	Salutation
FormatName	Text
IsLocalizable	False

Property	Value
IsValidForForm	True
IsValidForRead	True
LogicalName	salutation
MaxLength	20
RequiredLevel	None
Type	String

SetupUser

Property	Value
Description	Check if user is a setup user.
DisplayName	Restricted Access Mode
IsValidForForm	True
IsValidForRead	True
LogicalName	setupuser
RequiredLevel	SystemRequired
Type	Boolean

SetupUser Choices/Options

Value	Label
1	Yes
0	No

DefaultValue: False

SharePointEmailAddress

Property	Value
Description	SharePoint Work Email Address
DisplayName	SharePoint Email Address
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	sharepointemailaddress
MaxLength	1024
RequiredLevel	None
Type	String

SiteId

Added by: Service Solution

Property	Value
Description	Site at which the user is located.
DisplayName	Site
IsValidForForm	True
IsValidForRead	True
LogicalName	siteid
RequiredLevel	None
Targets	site
Type	Lookup

Skills

Property	Value
Description	Skill set of the user.
DisplayName	Skills
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	skills
MaxLength	100
RequiredLevel	None
Type	String

StageId

Property	Value
Description	Shows the ID of the stage.
DisplayName	(Deprecated) Process Stage
IsValidForForm	False
IsValidForRead	True
LogicalName	stageid
RequiredLevel	None
Type	Uniqueidentifier

SystemUserId

Property	Value
Description	Unique identifier for the user.
DisplayName	User
IsValidForForm	False
IsValidForRead	True
IsValidForUpdate	False
LogicalName	systemuserid
RequiredLevel	SystemRequired
Type	Uniqueidentifier

TerritoryId

Added by: Application Common Solution

Property	Value
Description	Unique identifier of the territory to which the user is assigned.
DisplayName	Territory
IsValidForForm	True
IsValidForRead	True
LogicalName	territoryid
RequiredLevel	None
Targets	territory
Type	Lookup

TimeZoneRuleVersionNumber

Property	Value
Description	For internal use only.
DisplayName	Time Zone Rule Version Number
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	timezoneruleversionnumber
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

Title

Property	Value
Description	Title of the user.
DisplayName	Title
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	title
MaxLength	128
RequiredLevel	None
Type	String

TransactionCurrencyId

Property	Value
Description	Unique identifier of the currency associated with the systemuser.
DisplayName	Currency
IsValidForForm	True
IsValidForRead	True
LogicalName	transactioncurrencyid
RequiredLevel	None

Property	Value
Targets	transactioncurrency
Type	Lookup

TraversedPath

Property	Value
Description	For internal use only.
DisplayName	(Deprecated) Traversed Path
FormatName	Text
IsLocalizable	False
IsValidForForm	False
IsValidForRead	True
LogicalName	traversedpath
MaxLength	1250
RequiredLevel	None
Type	String

UserLicenseType

Property	Value
Description	Shows the type of user license.
DisplayName	User License Type
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	userlicensetype
MaxValue	2147483647
MinValue	-2147483648
RequiredLevel	SystemRequired
Type	Integer

UTCConversionTimeZoneCode

Property	Value
Description	Time zone code that was in use when the record was created.

Property	Value
DisplayName	UTC Conversion Time Zone Code
Format	None
IsValidForForm	False
IsValidForRead	True
LogicalName	utcconversiontimezonecode
MaxValue	2147483647
MinValue	-1
RequiredLevel	None
Type	Integer

WindowsLiveID

Property	Value
Description	Windows Live ID
DisplayName	Windows Live ID
FormatName	Email
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	windowsliveid
MaxLength	1024
RequiredLevel	None
Type	String

YammerEmailAddress

Property	Value
Description	User's Yammer login email address
DisplayName	Yammer Email
FormatName	Email
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	yammeremailaddress

Property	Value
MaxLength	200
RequiredLevel	None
Type	String

YammerUserId

Property	Value
Description	User's Yammer ID
DisplayName	Yammer User ID
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	yammeruserid
MaxLength	128
RequiredLevel	None
Type	String

YomiFirstName

Property	Value
Description	Pronunciation of the first name of the user, written in phonetic hiragana or katakana characters.
DisplayName	Yomi First Name
FormatName	PhoneticGuide
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	yomifirstname
MaxLength	64
RequiredLevel	None
Type	String

YomiLastName

Property	Value

Property	Value
Description	Pronunciation of the last name of the user, written in phonetic hiragana or katakana characters.
DisplayName	Yomi Last Name
FormatName	PhoneticGuide
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	yomilastname
MaxLength	64
RequiredLevel	None
Type	String

YomiMiddleName

Property	Value
Description	Pronunciation of the middle name of the user, written in phonetic hiragana or katakana characters.
DisplayName	Yomi Middle Name
FormatName	PhoneticGuide
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	yomimiddlename
MaxLength	50
RequiredLevel	None
Type	String

ActiveDirectoryGuid

Property	Value
Description	Active Directory object GUID for the system user.
DisplayName	Active Directory Guid

Property	Value
IsValidForForm	False
IsValidForRead	False
LogicalName	activedirectoryguid
RequiredLevel	None
Type	Uniqueidentifier

Address1_Composite

Property	Value
Description	Shows the complete primary address.
DisplayName	Address
Format	TextArea
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	address1_composite
MaxLength	1000
RequiredLevel	None
Type	Memo

Address2_Composite

Property	Value
Description	Shows the complete secondary address.
DisplayName	Other Address
Format	TextArea
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	address2_composite
MaxLength	1000
RequiredLevel	None
Type	Memo

ApplicationIdUri

Property	Value
Description	The URI used as a unique logical identifier for the external app. This can be used to validate the application.
DisplayName	Application ID URI
FormatName	Text
IsLocalizable	False
IsValidForForm	True
IsValidForRead	True
LogicalName	applicationiduri
MaxLength	1024
RequiredLevel	None
Type	String

AzureActiveDirectoryObjectId

Property	Value
Description	This is the application directory object Id.
DisplayName	Azure AD Object ID
IsValidForForm	True
IsValidForRead	True
LogicalName	azureactivedirectoryobjectid
RequiredLevel	None
Type	Uniqueidentifier

AzureDeletedOn

Added by: AuthorizationCore Solution

Property	Value
DateTimeBehavior	UserLocal
Description	Date and time when the user was set as soft deleted in Azure.
DisplayName	Azure Deleted On
Format	DateAndTime
IsValidForForm	True
IsValidForRead	True

Property	Value
LogicalName	azuredeletedon
RequiredLevel	None
Type	DateTime

Live chat SDK Reference

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

The following JavaScript methods can be used to do various operations with the live chat widget of Omnichannel for Customer Service.

Methods

Method	Description
setContextProvider	Sets the context provider. The context provider function, when invoked, returns the context to be used for initializing a chat session.
getContextProvider	Retrieves the currently set custom context provider, if any.
removeContextProvider	Removes the currently set custom context provider, if any.
setAuthTokenProvider	Sets the authentication token provider.
getAuthTokenProvider	Gets the currently set authentication token provider, if any.
removeAuthTokenProvider	Removes the currently set authentication token provider, if any.
startChat	Opens an existing chat, if any. Otherwise, it initiates a new chat.
startProactiveChat	Enables organizations to engage users by automatically inviting them to a chat conversation based on the configured rules.
closeChat	Ends the conversation between the agent and customer. Any browser cache related to the conversation is also deleted.
getAgentAvailability	Retrieves the agent availability for a queue based on the routing rules. The omnichannel developer can use this API to determine whether the start conversation option should be visible to the customer and also for displaying information such as wait time and position in queues.

Events

Event	Description
lcw:ready	This event is raised when the live chat SDK is ready to use.
lcw:error	This event is raised in case an error occurs during the lifetime of a chat.For information about error codes and error messages, see the Error code reference for Omnichannel for Customer Service.
lcw:startChat	This event is triggered when a chat is started.
lcw:closeChat	This event is triggered when a chat is closed.
lcw:chatQueued	This event is raised when the chat conversation is created and started.
lcw:chatRetrieved	This event is raised when the system retrieves an ongoing chat conversation from cache after a page is reloaded or opened on another tab.
lcw:onClose	This event is triggered when the customer engaged on the chat widget closes the widget.
lcw:onMinimize	This event is triggered when the customer engaged on the chat widget minimizes the widget.
lcw:onMaximize	This event is triggered when the customer engaged on the chat widget maximizes the widget.
lcw:onMessageReceived	This event is triggered when the chat widget gets a new message.
lcw:onMessageSent	This event is triggered when a customer engaged on the chat widget sends a new message.
lcw:threadUpdate	This event is raised by live chat when an agent ends a conversation.
lcw:getAgentAvailability	This event is raised when the getAgentAvailability method returns a successful response.

setContextProvider

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Sets the context provider. The context provider function, when invoked, returns the context to be used for initializing a chat session.

> **Important**
>
> - The setContextProvider method is supported only for unauthenticated chat. For authenticated chat, you must use the JSON Web Token (JWT). More information: **Send authentication tokens**
> - You can pass only 100 custom context variables during each chat session.
> - The live chat SDK methods should be invoked after the **lcw:ready event** is raised. You can listen for this event by adding your own event listener on the window object.

Syntax

```
Microsoft.Omnichannel.LiveChatWidget.SDK.setContextProvider(contextProvider);
```

Parameters

Parameter	Type	Description
contextProvider	Function	Function that when invoked, returns the custom context

Return value

None

Example

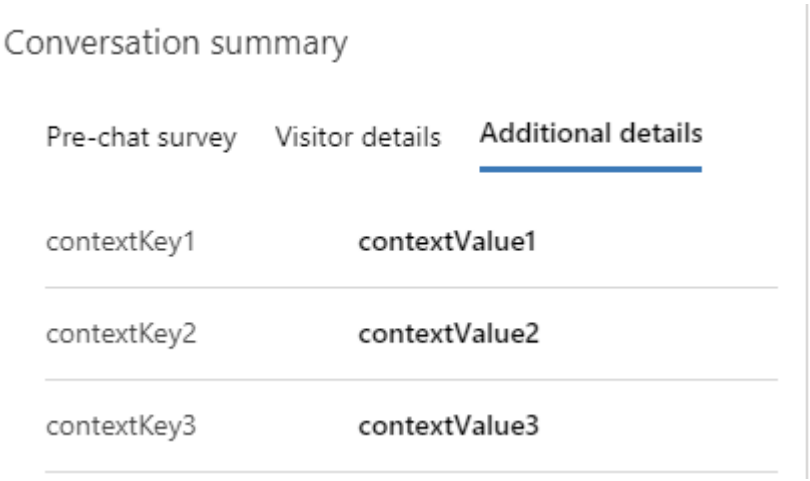
JavaScript

```
window.addEventListener("lcw:ready", function handleLivechatReadyEvent(){
        // Set the custom context provider
        // Throws error if contextProvider is not a function
        Microsoft.Omnichannel.LiveChatWidget.SDK.setContextProvider(function
contextProvider(){
                    //Here it is assumed that the corresponding work stream
would have context variables with logical name of 'contextKey1',
'contextKey2', 'contextKey3'. If no context variable exists with a matching
logical name, items are created assuming Type:string
                    return {
                                'contextKey1': {'value': 'contextValue1',
'isDisplayable': true},
                                'contextKey2': {'value': 12.34,
'isDisplayable': false},
                                'contextKey3': {'value': true}
                    };
        });
});
```

In the preceding sample code, the `value` attribute contains the value of the context variables.

The `isDisplayable` attribute, if set to `true`, will display the passed items in the third tab on the Conversation Summary Control for a conversation.

> **Note**
>
> If no context variables have been created under live workstream with a matching logical name, then the variables are created at runtime with the type String. More information: **Context variables**



Pass customer's self service as context

You can pass a customer's self service as context at the start of a conversation with that customer. The `setContextProvider` method passes the recent customer actions as part of context with self service type, for a new conversation between the customer and agent. A visitor journey record is created for each self service action.

Here's a sample code that shows how to use the `setContextProvider` method.

JavaScript

```
window.addEventListener("lcw:ready", function handleLivechatReadyEvent(){

Microsoft.Omnichannel.LiveChatWidget.SDK.setContextProvider(function
contextProvider(){
    return {
            'SelfService': { 'value' :
                '[ {"msdyn_displaytitle":"Page visited",
"msdyn_starttime":"yyyy-mm-ddThh:mm:ssZ","msdyn_type":192350000}, \
                  {"msdyn_displaytitle":"Phrase searched",
"msdyn_starttime":"yyyy-mm-ddThh:mm:ssZ","msdyn_type":192350001}, \
                  {"msdyn_displaytitle":"Knowledge article viewed",
"msdyn_starttime":"yyyy-mm-ddThh:mm:ssZ","msdyn_type":192350002}, \
                  {"msdyn_displaytitle":"Custom action performed",
"msdyn_starttime":"yyyy-mm-ddThh:mm:ssZ","msdyn_type":192350003} \
                 ]'
             }, // Additional context can be added as shown below
                //Here it is assumed that the corresponding work stream
would have context variables with logical name of 'contextKey1',
'contextKey2', 'contextKey3'. If no context variable exists with a matching
logical name, items are created assuming Type:string
                'contextKey1': {'value': 'contextValue1', 'isDisplayable':
true},
                'contextKey2': {'value': 12.34, 'isDisplayable': false},
                'contextKey3': {'value': true}
         };
    });
});
```

For the sample script to track self service actions that can be included in the Self Service Portal, see Self Service sample code.

Error codes

The following error can occur for this method.

Error code	Error message

Error code	Error message
1	Context provider method execution failed

Display custom context

getContextProvider

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Retrieves the currently set custom context provider, if any.

> **Note**
>
> The live chat SDK methods should be invoked after the **lcw:ready event** is raised. You can listen for this event by adding your own event listener on the window object.

Syntax

```
Microsoft.Omnichannel.LiveChatWidget.SDK.getContextProvider();
```

Parameters

None

Return Value

Returns the currently set custom context provider, if any. If there is no registered custom context provider, then it returns null.

Example

JavaScript

```
window.addEventListener("lcw:ready", function handleLivechatReadyEvent(){
   // Setting the custom context provider
   // Throws error if contextProvider is not a function
   Microsoft.Omnichannel.LiveChatWidget.SDK.setContextProvider(function
```

```
contextProvider(){
      // Here it is assumed that the corresponding work stream would have
context variables with logical name of 'contextKey1', 'contextKey2',
'contextKey3'.
      return {
                  'contextKey1': 'contextValue1', // string value
                  'contextKey2': 12.34, // number value
                  'contextKey3': true // boolean value
      };
   });

   // Retrieves the currently set custom context provider
   // If there is no registered custom context provider, then it returns
null
   let registeredContextProvider =
Microsoft.Omnichannel.LiveChatWidget.SDK.getContextProvider();
});
```

setAuthTokenProvider

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Sets the authentication token provider.

The authentication token provider function, when called with a callback function as a parameter, invokes the callback function with a valid JSON Web Token (JWT) string as the argument.
This method raises an error if the value of the `authTokenProvider` parameter is not a function.

Important

- In the payload of the JWT token, the value provided for `lwicontexts` key should be the serialized custom context.
- The custom context is a collection of key/value pairs. Only primitive values are allowed for any key.
- The keys of custom context must correspond to context variables that are created for the associated work stream in Omnichannel for Customer Service.
- The authentication token provider would be invoked by live chat widget when starting a new chat.

Note

The live chat SDK methods should be invoked after the **lcw:ready event** is raised. You can listen for this event by adding your own event listener on the window object.

This SDK is applicable only if authentication is enabled for the widget. To enable authentication for your widget, see Create chat authentication settings.

Syntax

```
Microsoft.Omnichannel.LiveChatWidget.SDK.setAuthTokenProvider(authTokenProvider);
```

Parameters

Parameter	Type	Description
authTokenProvider	Function	Function which when invoked with a callback function as an argument, fetches the JWT token and invokes the callback function with the JWT token as its argument

Return value

None

Example

Sample token payload

JSON

```
{
    "sub" : "87b4d06c-abc2-e811-a9b0-000d3a10e09e",
    "lwicontexts" :"{\"msdyn_cartvalue\":\"10000\",
\"msdyn_isvip\":\"false\"}",
    "iat" : 1542622071,
    "iss" : "contosohelp.com",
    "exp" : 1542625672,
    "nbf" : 1542622072
}
```

> **Note**
>
> In the above payload, the value corresponding to `lwicontexts` key should be the serialized custom context. The keys `msdyn_cartvalue` and `msdyn_isvip` in the serialized custom context correspond to context variables that are created for the associated work stream in Omnichannel for Customer Service.

JavaScript

```
let payloadToEncrypt = {
    "sub" : "87b4d06c-abc2-e811-a9b0-000d3a10e09e",
    "lwicontexts" :"{\"msdyn_cartvalue\":\"10000\",
\"msdyn_isvip\":\"false\"}",
    "iat" : 1542622071,
    "iss" : "contosohelp.com",
    "exp" : 1542625672,
    "nbf" : 1542622072
};

function convertToJwtToken(payloadToEncrypt){
    // Ideally, you call your service to convert the payload to a valid JWT
token
    return
Promise.resolve("eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJzdWIiOiI4N2I0ZDA2Yy
1hYmMyLWU4MTEtYTliMC0wMDBkM2ExMGUwOWUiLCJsd2ljb250ZXh0cyI6IntcIm1zZHluX2Nhcn
R2YWx1ZVwiOlwiMTAwMDBcIiwgXCJtc2R5bl9pc3ZpcFwiOlwiZmFsc2VcIn0iLCJpYXQiOjE1ND
I2MjIwNzEsImlzcyI6ImNvbnRvc29oZWxwLmNvbSIsImV4cCI6MTU0MjYyNTY3MiwibmJmIjoxNT
QyNjIyMDcyfQ.r37z1M5rMyRYMOJ-rhyTRYFOgvl9N7KvTMueSFPkiuM");
}

window.addEventListener("lcw:ready", function handleLivechatReadyEvent(){
// Sets the auth-token provider
// Throws error if authTokenProvider is not a function
    convertToJwtToken(payloadToEncrypt).then(function (jwtToken){

 Microsoft.Omnichannel.LiveChatWidget.SDK.setAuthTokenProvider(function
authTokenProvider(callback){
            callback(jwtToken);
        });
    });
});
```

Error codes

The following errors can occur with this method.

Error code	Error message
2	Auth token provider method execution failed
3	Auth token provider didn't provide any token
4	Auth token provider provided invalid token

getAuthTokenProvider

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Gets the currently set authentication token provider, if any.

> **Note**
>
> The live chat SDK methods should be invoked after the **lcw:ready event** is raised. You can listen for this event by adding your own event listener on the window object.

This SDK is applicable only if authentication is enabled for the widget. To enable authentication for your widget, see Create chat authentication settings.

Syntax

```
Microsoft.Omnichannel.LiveChatWidget.SDK.getAuthTokenProvider();
```

Parameters

None

Return Value

Returns the currently set authentication token provider, if any. If there is no registered authentication token provider, then it returns null.

Example

JavaScript

```
let payloadToEncrypt = {
    "sub" : "87b4d06c-abc2-e811-a9b0-000d3a10e09e",
    "lwicontexts" :"{\"msdyn_cartvalue\":\"10000\",
\"msdyn_isvip\":\"false\"}",
    "iat" : 1542622071,
    "iss" : "contosohelp.com",
    "exp" : 1542625672,
    "nbf" : 1542622072
};

function convertToJwtToken(payloadToEncrypt){
    // Ideally, you should call your service to convert the payload to a
valid JSON Web Token
    return
Promise.resolve("eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJzdWIiOiI4N2I0ZDA2Yy

setBotAuthTokenProvider

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

The bot authentication token provider function, when called with a callback function as a parameter, returns the `botAuthUrl` to send the token to the bot and invokes the callback function to set the sign-in card visibility.

Syntax

```
Microsoft.Omnichannel.LiveChatWidget.SDK.setBotAuthTokenProvider(authTokenProvider);
```

Parameters

Parameter	Type	Description
authTokenProvider	Function	Function which when invoked with a callback function as parameter, returns the `botAuthUrl` to send the token to the bot and invokes the callback function to set the sign-in card visibility.

Return value

Bot authentication URL.

Example

Here's a code sample that illustrates how you can pass an authentication token to an Azure or Power Virtual Agents bot during single sign-on.

JavaScript

```
const signInIds = [];
window.Microsoft.Omnichannel.LiveChatWidget.SDK.setBotAuthTokenProvider(asyn
```

```
c (botTokenUrl, callback) => {
  const urlSearchParams = new URLSearchParams(botTokenUrl);
  const signInId = urlSearchParams.get("state");

  if (signInIds.includes(signInId)) { // Ignore authenticated sign-in cards
    callback({show: false});  // Hide card
    return;
  }

  signInIds.push(signInId);

  const authUrl = ""; // Customer's Authentication API
  const authResponse = await fetch(authUrl, method: "POST"});
  const {token} = authResponse;  // Customer's Auth Token

  const data = {
    token: "token"
  };

  const payload = {
    method: "POST",
    headers: {
      "Content-Type": "application/json"
    },
    body: JSON.stringify(data)
  };

  try {
    const botAuthResponse = await fetch(botTokenUrl, payload); // Posts Auth
Token to Bot directly

    // Sign in through Bot is successful
    if (botAuthResponse.status === 200) {
      signInIds.push(signInId); // Track authenticated sign-in card
      callback({show: false}); // Hide card
    }

    if (botAuthResponse.status === 404 || botAuthResponse.status == 202) {
      callback({show: false}); // Hide card
      return;
    } else {
      // Other condition handling
    }

    return;
  } catch (error) {

  }

  callback({show: true});  // Show sign-in card by default
});
```

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Opens an existing chat, if any. Otherwise, it initiates a new chat.

> **Note**
>
> Listen to the **lcw:ready** event raised by a live chat before calling the live chat SDK methods. The live chat methods should be invoked after the **lcw:ready** event is raised. You can listen for this event by adding your own event listener on the window object.

Syntax

```
Microsoft.Omnichannel.LiveChatWidget.SDK.startChat({inNewWindow: inNewWindowValue});
```

Parameters

Parameter	Type	Required	Description
`inNewWindow`	Boolean	No	Decides whether to open the chat in a new window.

Return value

None

Example

JavaScript

```
window.addEventListener("lcw:ready", function handleLivechatReadyEvent(){
                // Opens an existing chat, if any. Else initiates a new chat

Microsoft.Omnichannel.LiveChatWidget.SDK.startChat({inNewWindow: true});
});
```

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Enables organizations to engage users by automatically inviting them to a chat conversation based on the configured rules. Organizations can use end-user data, user journey information, time spent on web page, and more to decide when to proactively engage customers through chat. Organizations can control the proactive chat experience using personalized trigger messages and configurable rules to define the target audience, time frame, and target location.

Syntax

```
Microsoft.Omnichannel.LiveChatWidget.SDK.startProactiveChat(notificationUIConfig: notificationUIConfigObject, showPrechat, { inNewWindow: inNewWindowValue });
```

Parameters

Parameter	Type	Required	Description
`notificationUIConfig`	Object	Yes	Allows you to pass UI configurations for proactive chat notification. This object lets you customize the notification, including the message to be displayed.
`showPrechat`	Boolean	No	Boolean flag to indicate whether prechat is shown if configured for the widget. The default value is `true`.
`inNewWindow`	Boolean	No	Decides whether to open the chat in a new window. This parameter resides within an options object.

Important

If no message is provided in the `notificationUIConfig` object, then the default message, "Hi! Have any questions? I'm here to help" gets displayed.

Return value

None

Example

JavaScript

```
window.addEventListener("lcw:ready", function handleLivechatReadyEvent(){
                Microsoft.Omnichannel.LiveChatWidget.SDK.startProactiveChat(
                  {message: "Hi! How are you doing today? Do you wish to
start a chat?"},
                    true,
                    {
                            inNewWindow: true
                    }
            );
});
```

getAgentAvailability

Article • 10/20/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Retrieves the agent availability for a queue based on the routing rules. The omnichannel developer can use this API to determine whether the start conversation option should be visible to the customer and also for displaying information such as wait time and position in queues.

> **Note**
>
> - Listen for the **lcw:ready** event raised by a live chat before calling the live chat SDK methods. The live chat methods should be invoked after the **lcw:ready** event is raised. You can listen for this event by adding your own event listener on the window object.
> - This method can be called multiple times from the client side when customer input changes. The client side cache is refreshed every 2 minutes or when the customer context parameters change.
> - This method can be called 100 times per minute per organization only. If you've exceeded the limit, you'll see the http 429 response status code that indicates that you've sent too many requests in a specified amount of time.

Syntax

```
Microsoft.Omnichannel.LiveChatWidget.SDK.getAgentAvailability();
```

Parameters

None

Return value

Name	Type	Description
`queueId`	String	The target queue where the request will be routed based on routing rule configuration and input data (value of entity and context which are part of routing rule are provided).
`isQueueAvailable`	Boolean	Displays: - TRUE if the queue is within operating hours. - FALSE if the queue is outside operating hours.
`StartTimeOfNextOperatingHour`	DateTime	The start time (UTC) of operating hours for the queue if it's outside operating hours. During operating hours, a value of 01-01-0001 is returned.
`EndTimeOfNextOperatingHour`	DateTime	The time (UTC) when operating hours end for the queue if it's outside operating hours. During operating hours, a value of 01-01-0001 is returned.
`nexttransitiontime`	DateTime	The time (UTC) when the queue is operational again if it's outside operating hours. The time when the queue is not operational is displayed during operating hours.
`positionInQueue`	Number	The position in queue for a customer waiting behind other customers in the same queue.
`isAgentAvailable`	Boolean	Displays: - TRUE if agents in the queue are currently available to take requests based on configured routing and assignment rules for workstream. - FALSE if agents aren't available to take requests.
`averageWaitTime`	Number	Average wait time in minutes for customers in the target queue based on past 48-hour data.

Example

JavaScript

```
window.addEventListener("lcw:ready", function handleLivechatReadyEvent(){
                // Gets the agent availability

Microsoft.Omnichannel.LiveChatWidget.SDK.getAgentAvailability();
});

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This event is triggered when a chat is started.

Lcw:startChat is raised when the related startChat() SDK method is called.

When a customer starts a chat, a call is made to the startChat() SDK method. This event is then raised when the startChat() SDK method is called.

Example

JavaScript

```
window.addEventListener("lcw:startChat", function
handleLivechatStartedEvent(){
    // Handle the live chat started event
});
```

Live chat SDK JavaScript API reference

lcw:onMessageReceived event (Omnichannel for Customer Service JavaScript API reference)

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

The `lcw:onMessageReceived` event is triggered when the chat widget gets a new message. You can use this event to create custom experiences for the user. For example, play a sound notification or update the page title to catch the user eye for the new message.

Users such as an agent in Dynamics 365 can send the message or the system can send an automated message. So, the possible values for `messageType` are "user" and "system".

This event will contain data in the payload to explain the source of the message.

Sample payload

Agent assigned

JSON

```
{

"channelData": {

"tags": [
    "system",
    "agentassignmentready"
],

},
"messageType": "system"

}
```

Agent accepted

JSON

```
{

"channelData": {

"tags": [
    "system",
    "agentaccepted"
],

},
"messageType": "system"

}
```

Agent sent a message

JSON

```
{

"channelData": {

"tags": [
    "public",
    "client_activity_id:1612311164266bkaspzvq05b"
],

},
"messageType": "user"

}
```

Agent ended the conversation

JSON

```
{

"channelData": {

"tags": [

    "agentendconversation"
],

},
"messageType": "system"
```

```
}
```

Agent ended the session

JSON

```
{

"channelData": {

"tags": [
    "system",
    "primarysessionclosed"
],

},
"messageType": "system"

}
```

Agent assignment failed

JSON

```
{

"channelData": {

"tags": [
    "system",
    "agentassignmentfailure"
],

},
"messageType": "system"

}
```

Queue position

JSON

```
{

"channelData": {

"tags": [
    "system",
    "queueposition",
```

```
    "customerqueuepositionnext"
],

},
"messageType": "system"

}
```

Example

JavaScript

```
window.addEventListener("lcw:onMessageReceived", function
handleWidgetMessageReceivedEvent(payload){ // Handle the live chat widget
message sent event });

lcw:onMessageSent event (Omnichannel for Customer Service JavaScript API reference)

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This event is triggered when a new message is sent by the customer engaged on the chat widget. You can use this event to create custom experiences around when users send a message. For example, this event can be used to detect user activity and engagement on the chat widget.

Example

JavaScript

```
window.addEventListener("lcw:onMessageSent", function
handleWidgetMessageSentEvent(){ // Handle the live chat widget message sent
event });
```

lcw:getAgentAvailability event (Omnichannel for Customer Service JavaScript API reference)

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This event is raised when the getAgentAvailability method returns a successful response.

Example

JavaScript

```
window.addEventListener("lcw:getAgentAvailability", function
handlegetAgentAvailabilityEvent(){
    // Handle getAgentAvailability event
});
```

lcw:error event (Omnichannel for Customer Service JavaScript API reference)

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This event is raised in case an error occurs during the lifetime of a chat.

For information about error codes and error messages, see the Error code reference for Omnichannel for Customer Service.

Example

The sample code given below shows how the errorEvent is caught and how the error details are obtained.

JavaScript

```
window.addEventListener("lcw:error", function (errorEvent) {
    let errorDetail = errorEvent.detail; // Object containing details about
the error event
    let errorCode = errorEvent.detail.errorCode; // Error code corresponding
to the error event
    let errorDescription = errorEvent.detail.errorDescription; //
Description of the error
});
```

Error code reference for Omnichannel for Customer Service

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Here are the error codes and error messages that are returned by the live chat SDK methods.

Error code	Error message
1	Custom context provider method execution failed
2	Auth token provider method execution failed
3	Auth token provider didn't provide any token
4	Auth token provider provided invalid token
7	Live chat widget scripts failed to load
8	Auth function cannot be found on webpage

> **Note**
>
> The live chat widget script can fail to load for a number of reasons. One possible reason is the user has disabled access to session and local storage in their browser. The reason will be described in the `errorDetail` attribute.

Here's a sample `errorEvent` object that's raised when the context provider method fails to run.

JSON

```
{
    detail: {
        errorCode: 1, // Error code corresponding to the error event
        errorDescription: "Context provider method execution failed" //
```

```
Description of the error
    }
}
```

getTranslationProvider

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This property is required to be set in web resource. It is called once, after the agent has logged in to Omnichannel for Customer Service. It helps Omnichannel for Customer Service to know the functions to be called for initializing a conversation and translating a message.

> **Important**
>
> See this **sample web resource** for more information on how to set the `getTranslationProvider` property.

Syntax

`window.Microsoft.Omnichannel.TranslationFramework.getTranslationProvider`

Type of object to be assigned

A function is required to be assigned to the property. The function should have no input parameters and should return a JavaScript object implementing following interface:

JSON

```
interface {
        initializeNewConversation: function,  // Required field, Function to
be called to initialize a conversation
        translateMessage: function;      // Required field, Function to be
called to translate a message
}
```

The `initializeNewConversation` parameter in above interface represents a function which will be called to initialize a conversation. More information:

initializeNewConversation

The `translateMessage` parameter in above interface represents a function which will be called to translate a message. More information: translateMessage.

A sample of setting the `getTranslationProvider` property is as follows.

JSON

```
/*
The following code has been copied from the link:
https://github.com/microsoft/Dynamics365-Apps-
Samples/blob/06e9c84263bac81e7411f95365c5e792aca15122/customer-
service/omnichannel/real-time-translation/webResourceV2.js#L452

Read and understand the following code in the context of the javacript file
that is mentioned in the preceding line.
*/
window.Microsoft.Omnichannel.TranslationFramework.getTranslationProvider =
function () {
    return {
        initializeNewConversation:
C1WebResourceNamespace.initializeNewConversationInWebResource,
        translateMessage:
C1WebResourceNamespace.translateMessageInWebResource
    }
};
```

Note

- On exception in the assigned function or invalid return values from the assigned function, Omnichannel for Customer Service will keep translation off for the conversation and might behave abnormally.

- If this property is not set, the following error will be displayed to the agent.

Add a web resource for real-time translation

initializeNewConversation

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This method is required to be implemented in web resource. It is called once, as soon as a new conversation invitation is accepted or an existing conversation is opened from Agent Dashboard.

1. You can choose to turn off or turn on the translation for a particular conversation using certain conditions; for example, you would like to turn the translation on if the agent and customer languages are different.
2. You can also override the agent's language to be used in translation for the conversation.
3. It provides you information about the conversation to take certain decisions, for example, the translation API engine that should be used for a conversation.

> **Important**
>
> See this **sample web resource** for more information on how to implement the `initializeNewConversation` API.

Syntax

```
function (conversationConfig): Object
```

Parameters

Name	Required	Type	Description

Name	Required	Type	Description
`conversationConfig`	Yes	JavaScript object	Provides details about conversation. Such as conversation id, default agent input language (From Real-time translation administrator configuration) etc. More details are available in the following paragraphs.

Here is the structure of `conversationConfig` parameter.

JSON

```
interface InviteParams {// Parameters received on a conversation invite
        inviteLocale: string;  //Language locale of the channel from where
conversation is received. This contains locale ID, example- "1033" for
english.
        channelType: string;   //The type of the channel, example- "lcw" for
chat widget, "facebook" for facebook.
}

interface conversationConfig {
        conversationId: string,  // Unique Id for conversation in
Omnichannel for Customer Service
        c1Language: string;      // Default agent input language (From Real
time translation administrator configuration)
        inviteParams: InviteParams;  // Implements InviteParams interface,
Represents the parameters received on a conversation invite
}
```

The `inviteLocale` parameter in `InviteParams` interface represents a Locale ID. More information: Locale ID.

The `channelType` parameter in `InviteParams` interface represents a supported channel in Omnichannel for Customer Service. The channels are listed as follows.

Name	Description
`"lcw"`	For Live Chat Widget channel
`"sms"`	For SMS channel
`"facebook"`	For Facebook channel
`"twitter"`	For Twitter channel
`"custom"`	For custom made channel

Name	Description
`"wechat"`	For WeChat channel
`"whatsapp"`	For WhatsApp channel
`"msteams"`	For Microsoft Teams channel
`"line"`	For Line channel
`"phonecall"`	For phone call channel

A sample of the `conversationConfig` parameter is as follows.

JSON

```
conversationConfig = {
  "conversationId": "2f67af9e-c05a-4784-aaea-916d6938fcea",
  "c1Language": "1033",
  "inviteParams": {
    "inviteLocale": "3082",
    "channelType": "lcw"
  }
}
```

Return Value

Returns a promise that resolves to the following JavaScript object.

JavaScript

```
{
        keepTranslationOn: boolean;// mandatory field, if true the
translation would be turned on for the conversation and vice-versa
        c1Language?: string;// optional field, return the agent's language
if input param conversationConfig.c1Language needs to be overriden for the
conversation
}
```

The `c1Language` parameter in resolved JavaScript object represents a Locale ID only from the following list.

Locale ID	Language
`"1033"`	English
`"1025"`	Arabic

Locale ID	Language
`"1069"`	Basque
`"1027"`	Catalan
`"1026"`	Bulgarian
`"1050"`	Croatian
`"1029"`	Czech
`"1030"`	Danish
`"1043"`	Dutch
`"1061"`	Estonian
`"1035"`	Finnish
`"1036"`	French
`"1110"`	Galician
`"1031"`	German
`"1032"`	Greek
`"1037"`	Hebrew
`"1081"`	Hindi
`"1038"`	Hungarian
`"1040"`	Italian
`"1057"`	Indonesian
`"1041"`	Japanese
`"1087"`	Kazakh
`"1042"`	Korean
`"1062"`	Latvian
`"1063"`	Lithuanian
`"1086"`	Malay
`"1044"`	Norwegian Bokmal

Locale ID	Language
`"1045"`	Polish
`"1046"`	Portuguese - Brazil
`"2070"`	Portuguese - Portugal
`"1048"`	Romanian
`"1049"`	Russian
`"3098"`	Serbian (Cyrillic)
`"2074"`	Serbian (Latin)
`"1051"`	Slovak
`"1060"`	Slovenian
`"3082"`	Spanish
`"1053"`	Swedish
`"1054"`	Thai
`"1055"`	Turkish
`"1058"`	Ukrainian
`"1066"`	Vietnamese
`"2052"`	Chinese - China
`"3076"`	Chinese - Hong Kong SAR

Sample expected response

JSON

```
{

  "keepTranslationOn": true,
  "c1Language": "1033"

}
```

Additional Information

- On exception in this method or invalid return values, Omnichannel for Customer Service will keep translation off for the conversation. For example: if resolved JavaScript object from the returned promise does not contains `keepTranslationOn` field or `c1Language` field contains a value that is not from list of Locale IDs, the conversation will start with translation turned off.
- Consider including minimal processing in this function because it makes the UI wait before rendering. If the run time of this function exceeds 30 seconds, the conversation will start with translation turned off, irrespective of the values of the returned promise.
- If this method is not implemented, the following error will be displayed to the agent.

Add a web resource for real-time translation

translateMessage

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This method is required to be implemented in web resource. This method is called for every conversation message exchanged between the customer and the agent, if translation is on and if the message has not been translated earlier in the conversation for the destination language.

> **Important**
>
> See this **sample web resource** for more information on how to implement the `translateMessage` API.

Syntax

```
function (conversationId, translationConfig): Object
```

Parameters

Name	Type	Description
`translationConfig`	JavaScript object	Consists of `conversationId`, `messagePayload` and `translateToC1orC2` key-value pairs.

Here's the structure of `translationConfig` parameter.

JSON

```
export class UserType {
        public static readonly C1 = "Agent"; //Used if the sender of the
message is agent
        public static readonly C2 = "Customer"; //Used if the sender of the
message is customer
```

```
        public static readonly CONSULT = "Consult Agent"; //Used if the
sender of the message is other than agent or customer
}

export class TranslateTo {
        public static readonly C1 = "Agent"; //Used if message is translated
for agent
        public static readonly C2 = "Customer"; //Used if message is
translated for customer
}

export class MessageContentType {
        public static readonly Text = "Text"; //Used if the content type is
text
}

interface Sender {
        userType: UserType;  //Points to any static field in UserType
type,Represents the type of the user who is sending this message
}

interface MessagePayload {
        content: string;                //Contains the content to be
translated
        contentType: MessageContentType;  //Points to any static field in
MessageContentType type,Represents the type of message content. For example:
"Text" etc.
        sender: Sender; //Implements Sender interface, Represents the sender
of the message
}

interface translationConfig {
        conversationId: string;   //Unique Id for conversation in
Omnichannel for Customer Service
        messagePayload: MessagePayload;  //Implements MessagePayload
interface, Represents the payload for the message to be translated
        translateToC1orC2: TranslateTo;   //Points to any static field in
TranslateTo type,Represents for whom the message has to be translated
 }
```

Here's a sample of the `conversationConfig` parameter.

JSON

```
translationConfig = {
  "conversationId": "2b330c52-6844-4d36-8e05-03c78c9681dc",
  "messagePayload": {
    "content": "Hello",
    "contentType": "Text",
    "sender": {
      "userType": "Agent"
    }
  },
```

```
  "translateToC1orC2": "Customer"
}
```

Return value

Returns a promise that resolves to a JavaScript object implementing `TranslatedMessageResponse` interface.

Interface object

JavaScript

```
export interface ErrorObject{
        isError: boolean; //mandatory field, represents true for error while executing this function else no
        errorCode: ErrorCodes; //mandatory field, represents the type of error based on errorCode
}

export interface TranslatedMessageResponse {
        translatedMessage: string;  //mandatory field, Contains the translated message
        sourceLanguage: string;       //mandatory field, represents the language locale of the original content
        destinationLanguage: string;  //mandatory field, represents the language locale of the translated content
        errorObject?: ErrorObject;  //optional field, represents the error object for any error scenarios
}
```

The `errorCode` parameter in `ErrorObject` represents the errors only from the following list.

Error message	Error code	Description
MESSAGE_TOO_LONG	100	Error code for very long message which the translation service cannot translate
LANGUAGE_NOT_SUPPORTED	101	Error Code for language not supported by the translation service
MESSAGE_NOT_TRANSLATED	102	Error Code for message not translated by the translation service
TRANSLATION_SERVICE_LIMIT_EXCEEDED	103	Error code if the quota limit exceeded for the translation service

Error message	Error code	Description
TRANSLATION_FAILED	104	Error Code if the translation service failed to translate a message
UNRECOGNIZED_TEXT	105	Error Code if the text is not recognized by the translation service
UNRECOGNIZED_ERROR	200	Error Code if there is any error other than the listed one.

The `sourceLanguage` and `destinationLanguage` parameter in `TranslatedMessageResponse` interface represents a Locale ID. More information: Locale ID.

Sample response

JSON

```
{
  "translatedMessage": "Hola",
  "destinationLanguage": "3082",
  "errorObject": {
    "isError": false,
    "errorCode": null
  },
  "sourceLanguage": "3082"
}
```

Note

- In case of an exception during execution of this method, Omnichannel for Customer Service will not retry and instead will display a translation failed error message.
- Error while executing this method can be notified via `errorObject`. In case of an error, Omnichannel for Customer Service will not retry and instead will display the error message based on the provided error codes.
- In case the returned response is invalid or incomplete, an error message on the translation banner will appear in the conversation control.
- If this method is not implemented, then the message will not be translated and the following error message will be displayed to the agent.

Omnichannel JavaScript API Reference

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

The following JavaScript methods can be used to perform various operations with the Omnichannel for Customer Service SDK.

Methods

Method	Description
getConversationId	Gets the unique GUID of the current ongoing conversation in a session.
getConversations	Gets a list of conversation (`msdyn_ocliveworkitem`) records for an agent.
openConversation	Opens a conversation as a session programmatically.
linkToConversation	Links the account, contact, or incident records to the conversation in the focused session.
unlinkFromConversation	Unlinks an already linked entity record of type customer (account or contact) or case from a conversation.
sendMessageToConversation	Sends messages to a conversation programmatically.

getConversationId

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This function can be called to fetch the unique GUID of the current ongoing conversation in a session. The conversation ID remains the same after the conversation is closed. The identifier can be used to fetch the conversation record programmatically.

Syntax

```
Microsoft.Omnichannel.getConversationId();
```

Parameters

None

Return value

Returns a promise resolved with currently ongoing conversation ID.

Example

```
Microsoft.Omnichannel.getConversationId();
```

getConversations

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This function can be used to fetch a list of conversation (`msdyn_ocliveworkitem`) records for an agent.

Syntax

```
Microsoft.Omnichannel.getConversations(input, correlationId);
```

Parameters

Parameter	Type	Description
input	String	JSON input. It has the following format: {`attributes, agentID, status, orderBy, createdBeforeDays`} where: • `attributes` is an array of strings containing entity attribute names • `agentId` is a string containing unique identifier for the agent • `status` is an array of strings with comma-separated values • `orderBy` is an array of objects in the format: [{ `attributeName`: "<Attribute_Name>" `descending`:<Boolean>}] • `createdBeforeDays` is the number of days since the conversation was created The `agentId` is the only required input variable and the rest are optional.
correlationId	String	Optional. Unique identifier for telemetry logging.

Return value

Returns a resolved or rejected promise based on the outcome of the operation.

> **Note**
>
> Even if the caller doesn't pass any attributes in the input, the function returns the records with the following default attributes:
>
> - msdyn_ocliveworkitemid
> - msdyn_liveworkstreamid
> - msdyn_lastsessionid
> - StatusCode
> - CreatedOn

Example

The following code snippet fetches the currently waiting conversation for the given agent ID.

JavaScript

```
var input = {
    "attributes": [
        "msdyn_title",
        "msdyn_channel"
        ],
    "agentId": "2b330c52-6844-4d36-8e05-03c78c9681dc",
    "status": [3],
    "orderBy": [
        {
            "attributeName": "createdon",
            "descending": true
        }
    ]
};
Microsoft.Omnichannel.getConversations(input).then(result => {
    console.log("result is as:", result);
    }, (error) => {
        console.log("error is as:", error);
    }
);
```

Article • 06/06/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This function can be used to open a conversation as a session programmatically.

Syntax

```
Microsoft.Omnichannel.openConversation(conversationId, lastsessionId, liveworkstreamId);
```

Parameters

Parameter	Type	Description
conversationId	String	Unique identifier for the conversation to open. Also reffered to as liveworkitemId.
lastsessionId	String	Optional. Unique identifier for the last session ID in which conversation was opened.
liveworkstreamId	String	Optional. Unique identifier for the live workstream to which the conversation belongs.

Return value

Returns a resolved or rejected promise based on the outcome of the operation.

Example

The following code snippet opens a specified conversation for a given last session ID and live workstream ID.

JavaScript

```
Microsoft.Omnichannel.openConversation("051a340d-c821-42be-8c43-
dfb42c4da821", "63e6b672-c1cc-4ba9-86d5-aea818e73092", "9e20ced1-7c81-eb11-
a812-000d3a9c25eb").then(result => {
  console.log(result);
}, error => {
    console.log(error);
});
```

Article • 06/06/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This function can be used to link account, contact, or incident records to the conversation in the focused session. The function will only link the records in the database. The link is reflected after the page is refreshed. The caller is responsible for the UI refresh. Only one account or contact, and one case can be linked to a conversation at a time. If a new customer or case record is linked, it will override the previous record link for the conversation.

> **Note**
>
> Omnichannel for Customer Service supports linking only to active conversations.

Syntax

```
Microsoft.Omnichannel.linkToConversation(entityLogicalName, recordId, conversationId);
```

Parameters

Parameter	Type	Description
entityLogicalName	String	Logical name of the entity (such as account, contact, or incident)
recordId	String	Unique identifier for the entity record to be linked
`*`conversationId	String	Unique identifier for the conversation to link. Also reffered to as liveworkitemId. Without providing this parameter, the entity will link to the focused conversation by default.

`*` Indicates optional parameter.

Return value

Returns a resolved or rejected promise based on the outcome of the operation.

Example

JavaScript

```
//Linking an incident record with the current conversation
Microsoft.Omnichannel.linkToConversation("incident", "6b726d86-d37c-43b8-b3a4-c4056ddd2e07", "b7397aae-ecf8-43a6-aeb0-07d294efb494").then((response) => {
    // Refreshing the tab UI
    Microsoft.Apm.refreshTab("tab-id-3");
}, (error) => {
    console.log(error);
});
```

unlinkFromConversation

Article • 06/06/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

This function can be used to unlink an already linked entity record of type customer (account or contact) or case from a conversation.

Syntax

```
Microsoft.Omnichannel.unlinkFromConversation(entityLogicalName, recordId, conversationId);
```

Parameters

Parameter	Type	Description
entityLogicalName	String	Logical name of the entity (such as account, contact, or incident)
recordId	String	Unique identifier for the entity record to be unlinked
`*`conversationId	String	Unique identifier for the conversation to unlink. Also reffered to as liveworkitemId. Without providing this parameter, the entity will unlink from the focused conversation by default.

`*` Indicates optional parameter.

Return value

Returns a resolved or rejected promise based on the outcome of the operation.

Example

JavaScript

```
//Unlinking an already linked incident record from the current conversation
Microsoft.Omnichannel.unlinkFromConversation("incident", "6b726d86-d37c-
43b8-b3a4-c4056ddd2e07", "b7397aae-ecf8-43a6-aeb0-
07d294efb494").then((response) => {
    // Refreshing the tab UI
    Microsoft.Apm.refreshTab("tab-id-3");
}, (error) => {
    console.log(error);
});

sendMessageToConversation

Article • 06/06/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Use this method to send messages to a conversation.

> **Note**
>
> - The conversation must be assigned to the agent that's logged in.
> - Only string literals and valid rich object JSON are currently supported. More information: **Retrieve and format rich messages**

Syntax

```
Microsoft.Omnichannel.sendMessageToConversation(message, toSendBox, conversationId);
```

Parameters

Parameter	Type	Description
message	String or MessageObject	Indicates the message to be sent to a conversation.
*toSendBox	Boolean	Determines if the message is sent to sendBox or directly to the conversation. Without providing this parameter, the message will be sent to sendbox by default.
*conversationId	String	Unique identifier of the conversation to which the message is to be sent. Also reffered to as liveworkitemId. Without providing this parameter, the message will send to the focused conversation by default.

`*` Indicates optional parameter.

Return value

Returns a resolved or rejected promise based on the outcome of the operation.

Example

JavaScript

```
// Sending message directly to the chat of conversation with provided
conversationId
Microsoft.Omnichannel.sendMessageToConversation("Test message",  false,
"00000000-0000-0000-0000-000000000000");
```

JavaScript

```
// Sending valid rich object to conversation
let validRichObjJSON = {
  "survey": {
    "Answers": {
      "Section": [
        {
          "Listitems": [
            {
              "OptionTitle": "Xbox Controller multi color",
              "OptionDescription": "Xbox Controller multi color",
              "OptionImageURL": "https://img-prod-cms-rt-microsoft-

            }
          ],
          "SectionTitle": "XBox Controllers",
          "Multiselect": true
        }
      ],
      "Title": "Microsoft Xbox Controllers",
      "subtitle": "Choose a controller you like",
      "ImageURL": "https://img-prod-cms-rt-microsoft-
com.akamaized.net/cms/api/am/imageFileData/RE2XP73?
ver=7371&w=270&h=222&q=90&m=6&p=48&b=%23FFFFFFFF&f=png&o=f&aim=true",
      "ResponseMessage": "Thanks for choosing."
    }
  },
  "richObjectId": "00000000-0000-0000-0000-000000000000",
  "richObjectType": 192350002,
  "richObjectName": "Test with 0 guid",
  "tabKey": ""
}

Microsoft.Omnichannel.sendMessageToConversation(validRichObjJSON,  false);
```

runMacro

Article • 03/17/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Allows you to execute a macro that was created using Macro Designer.

Syntax

```
Microsoft.ProductivityMacros.runMacro(macroName);
```

Parameters

Parameter	Type	Required	Description
macroName	String	Yes	Name of the macro that is to be executed.

Return value

Returns a promise string which is either resolved with a success message or rejected with an error message, based on execution result.

Example

JavaScript

```
Microsoft.ProductivityMacros.runMacro(macroName).then(function(success){
                console.log(success)
                },
                function(error){
                console.log(error)
});
```

msdyn_ApplyRoutingRuleEntityRecord Action Reference

Article • 03/17/2023

Applies the active routing rule to an entity.

Owning Solution: Microsoft.Dynamics.CRM.System

Parameters

Parameters allow for data to be passed to the action.

Name	Type	Nullable	Unicode	Description
Target	Microsoft.Dynamics.CRM.crmbaseentity	False	True	The entity to apply the routing rule to.

Return value

This action has no return value.

Entities

This action will apply to entities which have Routing Rule set to active.

Example

The example given below shows how you can create a Web API request to call `msdyn_ApplyRoutingRuleEntityRecord` action for `Incident` entity.

Request

HTTP

```
POST [Organization URI]/api/data/v9.1/msdyn_ApplyRoutingRuleEntityRecord
Accept: application/json
Content-Type: application/json; charset=utf-8
OData-MaxVersion: 4.0
OData-Version: 4.0

{
```

```
    "Target":"incidents(<incidentid>)"
}
```

Response

```
HTTP
```

```
HTTP 204 No Content
```

App profile manager JavaScript API Reference

Article • 03/17/2023

The app profile manager JavaScript API Reference includes methods and properties to manage tabs and sessions in Customer Service workspace.

Prerequisite

You must have App Profile user or Productivity tools user security roles to use the app profile manager APIs. More information: Security roles

Session management

The following methods and properties allow you to manage sessions in Customer Service workspace.

Method	Description
getFocusedSession	Returns the session object of the session that is in focus.
getAllSessions	Returns the unique identifier of all sessions.
getSession	Returns the session object for the specified session ID.
createSession	Creates a session based on a session template and returns the unique identifier of the session.
canCreateSession	Returns a Boolean value indicating whether a new session can be created.
close	Closes a session.
focus	Sets the focus on a session.
requestFocus	Shows a notification indicator on a given session if the session is not in focus.

Property	Description
sessionId	The ID of a given session.
isDefault	Boolean value indicating if a session is the Home session.

Property	Description
canClose	Boolean value indicating whether a session can be closed.
title	The text label of a session.

Tab management

The following methods and properties allow you to manage tabs in Customer Service workspace.

Method	Description
getFocusedTab	Returns the tab object of the tab that is in focus.
getAllTabs	Returns the unique identifier of all tabs for a session.
getTab	Returns the tab object of the specified tab ID.
createTab	Creates a tab in a focused session and returns the unique identifier of the tab.
canCreateTab	Returns a Boolean value indicating whether a new tab can be created for a session.
closeTab	Closes the tab object for a tab ID.
focusTab	Sets the focus on the tab object for a tab ID.
refreshTab	Refreshes the tab object for a tab ID.

Property	Description
tabId	The ID of a tab.
canClose	Boolean value indicating whether a tab can be closed.
title	The text label of a tab.

Context management

The following method allows you to manage the session context in Customer Service workspace.

Method	Description

Method	Description
updateContext	Sets the automation dictionary and enables providers to add, modify, and remove values of slugs; the updated values are then available for invoking macros in the future.

App profile manager

getFocusedSession (app profile manager)

Article • 03/17/2023

Returns the session object of the session that is in focus.

Syntax

`Microsoft.Apm.getFocusedSession();`

Return value

Session as an object.

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
console.log(session.sessionId);
```

getAllSessions (app profile manager)

Article • 03/17/2023

Returns the unique identifier of all sessions.

Syntax

`Microsoft.Apm.getAllSessions();`

Return value

Collection of session identifiers.

Example

JavaScript

```
const sessionIds = Microsoft.Apm.getAllSessions();
sessionIds.forEach(id=> {
        console.log(id);
});
```

getSession (app profile manager)

Article • 03/17/2023

Returns the session object for a session ID.

Syntax

`Microsoft.Apm.getSession(sessionId);`

Parameters

**Name	Type	Required	Description
sessionID	String	Yes	The session ID

Return value

Session as an object.

Example

JavaScript

```
const sessionId = "session-id-1";
const session = Microsoft.Apm.getSession(sessionId);
if (!session.isDefault) {
    session.title = "new title";
}
```

createSession (app profile manager)

Article • 03/17/2023

Creates a session based on a session template and returns the unique identifier of the session.

Syntax

`Microsoft.Apm.createSession(SessionInput);`

Parameters

Name	Type	Required	Description
SessionInput	String	Yes	JSON input properties of the session to be created.

The structure of the JSON `SessionInput` parameter is as follows:

JSON

```
{
        /**
         * Returns the name of the template used in the session
         */
        templateName: string;
        /**
         * additional information for session creation
         */
        sessionContext: Map<string, string>;
        /**
         * will focus after session is created
         */
        isFocused?: boolean;
    }
```

Return value

Session identifier as String.

Examples

These examples use the `createSession` method to create a new session passing an entity record identifier and a session template as parameters.

Create a basic session

Creates a new session passing the incident as entity name, incident Id as entityId, and unique name of the session template as templateName.

> **Note**
>
> The user invoking these methods must be assigned to an app profile that contains the session template.

JavaScript

```
x=new Map();
x.set("parametersStr", '[["entityName", "incident"], ["entityId", "fac04293-1ab0-eb11-8236-000d3a5c49ed"]]');
Microsoft.Apm.createSession({templateName: "case_entity_session_default_template", sessionContext: x});
```

Create a session that is not in focus

JavaScript

```
x=new Map();
x.set("parametersStr", '[["entityName", "incident"], ["entityId", "0e0e6c4f-cbb6-eb11-8236-000d3a5ab8b9"]]');
Microsoft.Apm.createSession({templateName: "case_entity_session_default_template", sessionContext: x, isFocused: false});
```

canCreateSession (app profile manager)

Article • 03/17/2023

Allows you to check whether a new session can be created.

> **Note**
>
> Customer Service workspace lets you open up to 10 sessions simultaneously. If you open more than 10 sessions, then the following message is displayed: "Maximum sessions reached. Close a session before opening another."

Syntax

`Microsoft.Apm.canCreateSession();`

Return value

A Boolean value of true if a new session can be created; otherwise, false.

Example

JavaScript

```
if  (Microsoft.Apm.canCreateSession()) {
//checks if maximum allowed of sessions has been reached
x=new Map();
x.set("parametersStr", '[["entityName", "incident"], ["entityId", "fac04293-1ab0-eb11-8236-000d3a5c49ed"]]');
Microsoft.Apm.createSession({templateName: "case_entity_session_default_template", sessionContext: x});
}
```

close (app profile manager)

Article • 03/17/2023

Closes a session.

> **Note**
>
> The Home session cannot be closed.

Syntax

`Microsoft.Apm.getFocusedSession().close();`

`Microsoft.Apm.getSession(sessionId).close();`

Return value

None.

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
if (session.canClose) {
    session.close();
}
```

focus (app profile manager)

Article • 03/17/2023

Sets the focus on a session.

Syntax

```
Microsoft.Apm.getSession(sessionId).focus();
```

Return value

None.

Example

JavaScript

```
Microsoft.Apm.getSession("session-id-4").focus();
```

requestFocus (app profile manager)

Article • 03/17/2023

Shows a notification indicator on a session if the session is not in focus.

Syntax

```
Microsoft.Apm.getSession(sessionId).requestFocus();
```

Return value

None.

Example

JavaScript

```
Microsoft.Apm.getSession("session-id-4").requestFocus();
```

sessionId (app profile manager)

Article • 03/17/2023

The ID of a session.

Syntax

```
Microsoft.Apm.getSession(sessionId).focus();
```

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
console.log(session.sessionId);
```

isDefault (app profile manager)

Article • 03/17/2023

Boolean value indicating whether a session is the Home session.

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
console.log(session.isDefault);
```

canClose (app profile manager session)

Article • 03/17/2023

Boolean value indicating whether a session can be closed.

> **Note**
>
> If the canClose property is set to false, then the button to close a session from the session panel is hidden. Otherwise, the close button is visible when hovering over the session on the session panel.

Return value

None.

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
session.canClose = false;
```

title (app profile manager session)

Article • 03/17/2023

The text label of a session.

> **Note**
>
> The title of the Home session cannot be changed.

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
session.title = "Testing";
```

getFocusedTab (app profile manager)

Article • 03/17/2023

Returns the tab object of the tab that is in focus.

Syntax

`Microsoft.Apm.getFocusedSession().getFocusedTab();`

Return value

The tab object.

Example

JavaScript

```
const tab = Microsoft.Apm.getFocusedSession().getFocusedTab();
tab.refresh();
```

getAllTabs (app profile manager)

Article • 03/17/2023

Returns the unique identifiers of all tabs for a specified session.

Syntax

```
Microsoft.Apm.getFocusedSession().getAllTabs();
```

Return value

Collection of tab identifiers.

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
session.getAllTabs().forEach(id => {
    const tab = session.getTab(id);
    console.log(tab.title);
});
```

getTab (app profile manager)

Article • 03/17/2023

Returns the tab object for a tab identifier.

Syntax

```
Microsoft.Apm.getFocusedSession().getTab();
```

Return value

Collection of tab identifiers.

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
session.getTab("tab-id-1").refresh();
```

createTab (app profile manager)

Article • 10/09/2023

Creates an app tab in a focused session and returns the unique identifier of the tab.

Syntax

`Microsoft.Apm.createTab(AppTabInput);`

Parameters

Name	Type	Required	Description
AppTabInput	String	Yes	JSON input properties of the tab to be created.

The structure of the JSON `AppTabInput` parameter is as follows:

JSON

```
{
    //Unique Name of the Application Tab Template
    // type = string
    templateName: <unique name of the application tab template>;
    //additional context for tab creation and tab slugs
    // type  Map<string, string>
    appContext?:  Map<string, string>;
    //should this tab be focused after creation
    // type=boolean
    isFocused?: <true or false>;
}
```

Return value

Tab identifier as String.

Examples

These examples use the `createTab` method to launch a new tab.

Create a basic tab

Creates a new tab in the focused session, passing the entity name, recordId, and app tab template name as parameters.

JavaScript

```
var tabInput = {templateName: "msdyn_entityrecord",  appContext: new
Map().set("entityName", "account").set("entityId", "09e68a6e-b7ef-eb11-bacb-
000d3a373d11"),  isFocused: true};
Microsoft.Apm.createTab(tabInput);
```

Create a tab passing values to an entity form

Creates a new tab in the focused session passing the entity name and app tab template name as parameters. It also populates the target entity form with additional values.

JavaScript

```
var formParams = {};
formParams["subject"] = "Collaboration task";
formParams["actualdurationminutes"] = 60;
formParams["prioritycode"] = 2;
formParams["scheduledend"] = "12/12/2030 10:00"
formParams["regardingobjectid"] = "a333a119-d573-ec11-8942-000d3a840a75";
formParams["regardingobjectidname"] = "How do I measure my tamp pressure?";
formParams["regardingobjectidtype"] = "incident";

var tabInput = {
templateName: "msdyn_entityrecord",
appContext: new Map().set("entityName", "task").set("formId", "d5b4a1b2-
de4f-4f86-8768-b0730001e7d1").set("data", JSON.stringify(formParams)),
isFocused: true
};
Microsoft.Apm.createTab(tabInput);
```

Create a tab with a web resource

Creates a new tab in the focused session passing a web resource as parameter for app tab template.

JavaScript

```
var tabInput = {templateName: "msdyn_omnichannel_kbsearch", isFocused:
true};
Microsoft.Apm.createTab(tabInput);
```

Create a tab with a web resource passing web resource parameter

Creates a new tab in the focused session passing a tab template and web resource parameter as app tab template parameters.

```
var tabInput = {
    templateName:"msdyn_omnichannel_kbsearch",
    appContext: new Map().set("data", "Contoso"),
    isFocused: true};
Microsoft.Apm.createTab(tabInput);
```

Create a tab with a web resource passing web resource name and web resource parameter

Creates a new tab in the focused session passing a tab template, web resource name, and web resource parameter as app tab template parameters.

```
var tabInput = {
    templateName:" new_tabtemplate_customwebresource",
     appContext: new Map().set("data", " Contoso
").set("webresourceName","msdyn_kbsearchpagehost.html"),
    isFocused: true};
Microsoft.Apm.createTab(tabInput);
```

Create a tab with Power Apps component framework control page

Creates a new tab in the focused session passing a framework control as a parameter for the app tab template. The control is passed from the API call.

JavaScript

```
var controlDataParams = {};
controlDataParams["<parameter>"] = "<Value>";

x = new Map();
x.set("<custom_session_context_params_key>", "<Value>");
x.set("parametersStr", '[["controlName", "<Control_Name>"],
```

```
["data",'+JSON.stringify(controlDataParams)+']]');

Microsoft.Apm.createSession(
    {
        templateName: "<template_name>",
        sessionContext: x
    });
```

You can also pass the following parameters:

JavaScript

```
var controlDataParams = {};
controlDataParams["<parameter>"] = "<Value>";

x = new Map();
x.set("<custom_session_context_params_key>",
JSON.stringify(controlDataParams));
x.set("<additional_custom_session_params>", "<Value>");

Microsoft.Apm.createSession(
    {
        templateName: "<template_name>",
        sessionContext: x
    });
```

canCreateTab (app profile manager)

Article • 03/17/2023

Allows you to check whether a new tab can be created in a session.

> **Note**
>
> Customer Service workspace lets you open up to 10 tabs simultaneously, in a session. If you open more than 10 tabs, then the following message is displayed: "Maximum tabs reached. Close a tab in this session before opening another."

Syntax

```
Microsoft.Apm.getFocusedSession().canCreateTab();
```

Return value

A Boolean value of true if a new tab can be created; otherwise, false.

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
console.log(session.canCreateTab());
```

closeTab (app profile manager)

Article • 03/17/2023

Closes the specified app tab in the current session.

> **Note**
>
> The anchor tab of a session (the first tab) cannot be closed.

Syntax

```
Microsoft.Apm.closeTab(tabId);
```

Parameters

Name	Type	Required	Description
tabId	String	Yes	Unique identifier of the tab to be closed.

Return value

None.

Examples

Closing a tab using Microsoft.Apm.closeTab

JavaScript

```
const tab = Microsoft.Apm.getFocusedSession().getFocusedTab();
if (tab.canClose) {
    Microsoft.Apm.closeTab(tab.tabId);
}
```

Closing a tab using Microsoft.Apm.getFocusedSession().getFocusedTab().close()

JavaScript

```
const tab = Microsoft.Apm.getFocusedSession().getFocusedTab();
if (tab.canClose) {
    tab.close();
}
```

focusTab (app profile manager)

Article • 03/17/2023

Sets the focus on a specified tab in the current session.

Syntax

```
Microsoft.Apm.focusTab(tabId);
```

Parameters

Name	Type	Required	Description
tabId	String	Yes	Unique identifier of the tab to be focused.

Return value

None.

Examples

The following examples use the `focusTab` method to set the focus on a specified tab.

Set a tab in focus using Microsoft.Apm.focusTab(tabId)

JavaScript

```
Microsoft.Apm.focusTab("tab-id-5);
```

Set a tab in focus using Microsoft.Apm.getFocusedSession().getTab().focus()

JavaScript

```
Microsoft.Apm.getFocusedSession().getTab("tab-id-5").focus();
```

refreshTab (app profile manager)

Article • 03/17/2023

Refreshes the app tab in the current session.

Syntax

```
Microsoft.Apm.refreshTab(tabId);
```

Parameters

Name	Type	Required	Description
tabId	String	Yes	Unique identifier of the tab that has to be refreshed.

Return value

None.

Examples

The following examples use the `refreshTab` method to refresh a specified tab.

Refresh a tab using `refreshTab` method

JavaScript

```
Microsoft.Apm.refreshTab("tab-id-2")
```

Refresh a tab using `refresh` method

JavaScript

```
Microsoft.Apm.getFocusedSession().getFocusedTab().refresh();
```

tabID (app profile manager)

Article • 04/07/2023

The identifier of a tab.

Example

JavaScript

```
const session = Microsoft.Apm.getFocusedSession();
const tabId = session.getFocusedTab().tabId;
console.log(tabId);
```

canClose (app profile manager tab)

Article • 03/17/2023

A Boolean value indicating whether a tab can be closed.

> **Note**
>
> If the canClose property is set to false, then the button to close the tab is hidden. Otherwise, the close button is visible.

Return value

None.

Example

JavaScript

```
const tab = Microsoft.Apm.getFocusedSession().getFocusedTab();
if (tab.canClose) {
    tab.close();
}
```

title (app profile manager tab)

Article • 04/07/2023

The text label of a tab.

Example

JavaScript

```
const tab= Microsoft.Apm.getFocusedSession().getFocusedTab();
tab.title = "New Tab Title";
```

updateContext (app profile manager)

Article • 03/17/2023

Allows you to set the automation dictionary and enables providers to add, modify, and remove values of slugs; the updated values are then available for invoking macros in the future.

Syntax

```
Microsoft.Apm.getFocusedSession().updateContext(input);
```

Parameters

Name	Type	Required	Description
input	String	Yes	JSON input properties of the session context to be updated.

Return value

None.

Example

JavaScript

```
Microsoft.Apm.getFocusedSession().updateContext({"customerName":"Contoso"});
```

Responsible AI FAQ for Dynamics 365 Customer Service

Article • 08/04/2023

An AI system includes not only the technology, but also the people who use it, the people affected by it, and the environment in which it's deployed. Microsoft's Responsible AI FAQs are intended to help you understand how AI technology works, the choices system owners and users can make that influence system performance and behavior, and the importance of thinking about the whole system, including the technology, the people, and the environment. You can use Responsible AI FAQs to better understand specific AI systems and features that Microsoft develops.

Responsible AI FAQs are part of a broader effort to put Microsoft's AI principles into practice. To find out more, see Microsoft AI principles.

AI-driven features in this app

This app contains a growing list of AI-driven features. To learn about the capabilities and impact of specific features, select a feature name from the list.

FAQ for Copilot in Customer Service

Article • 08/04/2023

This FAQ article helps answer the questions around the responsible use of AI in copilot features in Customer Service.

What is Copilot in Dynamics 365 Customer Service?

Copilot is an AI-powered tool that transforms the agent experience in Dynamics 365 Customer Service. It provides real-time AI powered assistance that will help agents resolve issues faster, handle cases more efficiently, and automate time-consuming tasks. Then agents can focus on delivering high-quality service to their customers.

What are the systems capabilities?

Copilot provides the following main features:

- **Ask a question**: Is the first tab that agents see when they activate the Copilot help pane. It's a conversational interface with Copilot, which helps provide contextual responses to the agents' questions. Copilot's responses are based on both internal and external knowledge sources provided by your organization during setup.
- **Write an email**: Is the second tab on the Copilot help pane helps agents quickly create email responses based on the context of the case, reducing the time users need to spend creating emails.
- **Draft a chat response**: Enables agents to create a response in a single click to the ongoing digital messaging conversation from knowledge sources configured by your organization.
- **Summarize a case**: Copilot provides agents with a summary of a case right on the case form, so they can quickly catch up on the important details of a case.
- **Summarize a conversation**: Copilot provides agents with a summary of a conversation at key points throughout the customer journey such as virtual agent handoffs, transfers and on demand.

What is the system's intended use?

Copilot in Customer Service is intended to help customer service representatives work more efficiently and effectively. Customer service representatives can use Copilot's knowledge-based responses to save time from searching knowledge articles and drafting responses. Copilot summaries are designed to support agents in quickly ramping up on cases and conversations. Content generated by Copilot in Customer Service isn't intended to be used without human review or supervision.

How was Copilot in Customer Service evaluated? What metrics are used to measure performance?

Copilot in Customer Service has been evaluated against real world scenarios with customers around the world through each phase of its design, development, and release. Using a combination of research and business impact studies, we've evaluated various quantitative and qualitative metrics about Copilot, including its accuracy, usefulness, and agent-trust.

What are the limitations of Copilot in Customer Service? How can users minimize the impact of Copilot limitations?

Copilot's knowledge-based capabilities like ask a question, write an email, and draft a chat response, are dependent on high-quality and up-to-date knowledge articles for grounding. Without these knowledge articles, users are more likely to encounter Copilot responses that aren't factual.

To minimize the likelihood of seeing non-factual responses from Copilot, it's important that the organizations employ robust knowledge management practices to ensure the business knowledge that connects to Copilot is of high-quality and up-to-date.

What operational factors and settings allow for effective and responsible use of the system?

Always review results from Copilot

Copilot is built on large language model technology, which is probabilistic in nature. When presented with a piece of input text, the model calculates the probability of each

word in that text given the words that came before it. The model then chooses the word that is most likely to follow. However, since the model is based on probabilities, it can't say with absolute certainty what the correct next word is. Instead, it gives us its best guess based on the probability distribution it has learned from the data it was trained on. Copilot uses an approach called grounding, which involves adding additional information to the input to contextualize the output to your organization. It uses semantic search to understand the input and retrieve relevant internal organizational documents and trusted public web search results, and guides the language model to respond based on that content. While this is helpful in ensuring Copilot responses adhere to organizational data, it's important to always review results produced by Copilot prior to using them.

Get the best out of Copilot

When you're interacting with Copilot, it's important to keep in mind that the structure of the questions can greatly affect the response that Copilot gives. To interact with Copilot effectively, it's crucial to ask clear and specific questions, provide context to help the AI better understand your intent, ask one question at a time, and avoid technical terms for clarity and accessibility.

Ask clear and specific questions

Clear intent is essential when asking questions, as it directly impacts the quality of the response. For instance, asking a broad question like “Why is the customer’s coffee machine not starting up?” is less likely to yield a useful response compared to a more specific question, such as “What steps can I take to determine why the customer’s coffee machine isn't starting up?”.

However, asking an even more detailed question like “What steps can I take to determine why a Contoso 900 coffee machine with a 5-bar pressure rating isn't starting up?” narrows down the scope of the problem and provides more context, leading to more accurate and targeted responses.

Add Context

Adding context helps the conversational AI system better understand the user's intent and provide more accurate and relevant responses. Without context, the system might misunderstand the user's question or provide generic or irrelevant responses.

For example, "Why is the coffee machine not starting up?" will result in a generic response when compared to a question with more context like, "Recently, the customer

initiated descaling mode on their coffee machine and completed descaling successfully. They even received three flashes from the power light at the end to confirm that descaling was complete. Why are they unable to start the coffee machine anymore?"

Adding context in this manner is important because it helps Copilot better understand the user's intent and provide more accurate and relevant responses.

Avoid technical terms if possible

We recommend that you avoid using extremely technical terms and resource names when interacting with Copilot because the system may not always understand it accurately or appropriately. The use of simpler, natural language helps ensure that the system can understand the user's intent correctly and provide clear, useful responses. For example –

"The customer can't SSH into the VM after having changed the firewall config."

Instead, you can rephrase as –

“The customer changed the firewall rules on their virtual machine. However, they can no longer connect using Secure Shell (SSH). Can you help?”

By following the suggestions, agents can enhance their interactions with Copilot and increase the likelihood of receiving accurate and confident responses from it.

Summarizing or expanding a response

Sometimes the response from Copilot can be longer than expected. This could be the case when the agent is in a live chat conversation with a customer and needs to send concise responses when compared with sending a response over email. In such cases, asking Copilot to “summarize the response” will result in a concise answer to the question. Similarly, if there's a need for more detail, asking Copilot to “Provide more details” will result in a more detailed answer to your question. If the response is truncated, typing “continue” will display the remaining part of the response.

In which Customer Service apps is Copilot available?

Copilot is available in Customer Service workspace, Customer Service Hub, Omnichannel for Customer Service, and custom apps.

How can I influence the responses generated by copilot? Can I fine tune the underlying LLM?

It's not possible to customize the large language model (LLM) directly. Copilot responses can be influenced by updating the source documentation. All the feedback content from Copilot responses is stored. Reports can be created using this data to determine the data sources that need to be updated. It’s a good idea to have processes in place to periodically review the feedback data and ensure knowledge articles are providing the best and most up-to-date information to Copilot.

What's the data security model for Copilot?

Copilot enforces the role-based access (RBAC) controls defined and adheres to all the existing security constructs. Therefore, agents cannot view data that they do not have access to. Additionally, only data sources that the agent has access to are used for copilot response generation.

Can Copilot read tables and images in my knowledge articles?

At this time, Copilot cannot read tables and images in knowledge articles.

Where does data processing and retrieval occur to generate copilot responses?

Copilot is not calling the public OpenAI service that powers ChatGPT. Copilot in Customer Service uses the Microsoft Azure OpenAI Service in a Microsoft managed tenant. All data processing and retrieval occurs within Microsoft managed tenants. Additionally, customer’s data is not shared and is not fed back into public models.

Check your contact center health

Article • 10/25/2023

As administrators, you can use the integrated health checker to identify any errors, warnings, and then recommended best practices in your configuration. You'll receive proactive notifications of emerging issues with health checks running in the background. This proactive approach can help ensure that your call center flows and configurations operate at optimal levels.

Prerequisites

You must have the System Administrator role.

Run a check

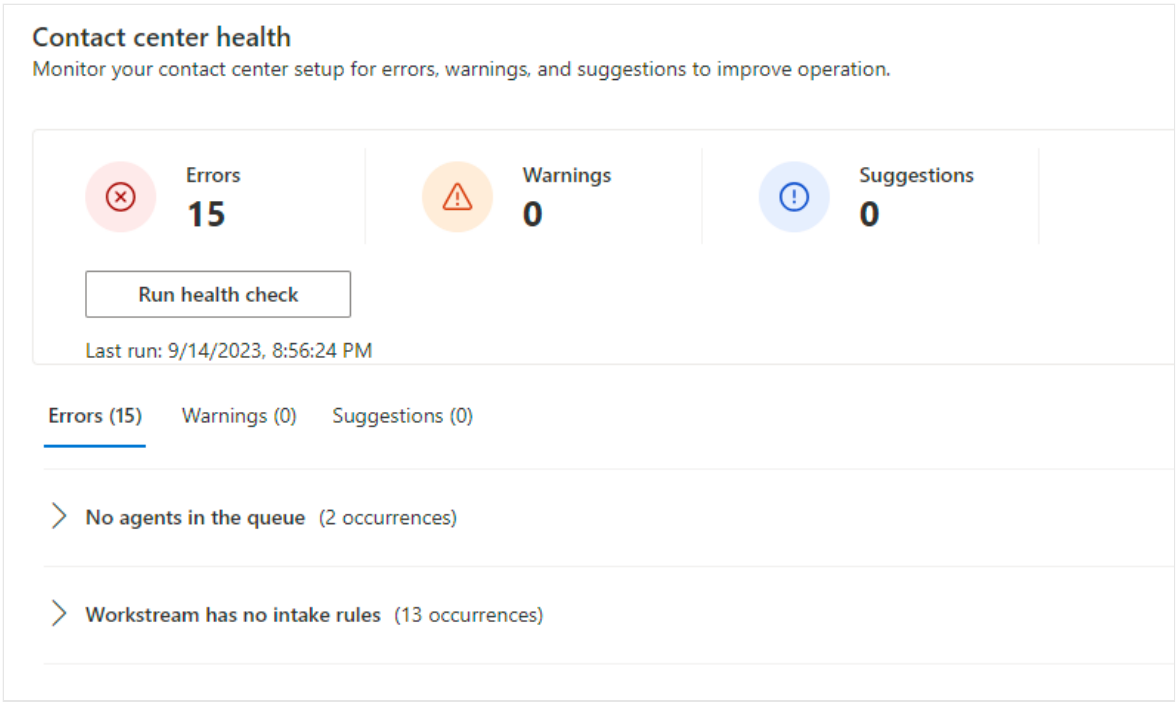
Do the following steps to check for configuration errors and incomplete configurations in your Customer Service environment.

1. Sign into Customer Service admin center. The **Home** page displays the **Contact center health** section.

2. Select **Run health** check. Depending on the size of your contact center and the various features that you have configured, the check takes a couple of minutes to run and display the results.

   After the check is complete, the page displays the results in three categories with the number of occurrences as follows:

   - Errors
   - Warnings
   - Suggestions



3. Expand a category to see the problems and then select the link to a problematic setting. The setting opens on a new tab for you to take action on it.

4. Optionally, after you resolve all the issues in the configuration, run the health check again until you see zero occurrences of errors and warnings.

Health check rules

Some of the rules used in the health check and their descriptions are as follows.

Category	Problem: Description	Recommendation displayed by the health checker
Error	Automatic record creation or update didn't work: To review issues with automatic record creation and update rules, visit the activity monitor dashboard.	Link to the activity monitor.
Error	SLA compliance risks and failures aren't being monitored: Agents aren't being informed about SLA compliance failures or risks. To resume compliance monitoring, restart the SLAInstanceMonitoringWarningAndExpiryFlow cloud flow solution within Power Automate.	Link to Power Automate flow.
Error	Default queue is inactive: Routing rules using this queue won't work. Activate the queue or change the default to an active queue	Link to the inactive queue page to activate the default queue.
Error	No agents in the queue: A queue without agents can't be used for routing. Remove the empty queue from routing	Link to queue page to add agents or

Category	Problem: Description	Recommendation displayed by the health checker
	definitions, or add agents to the queue.	supervisors.
Error	Workstream has no intake rules: Without an intake rule, a workstream's routing definitions won't work. Define an intake rule for the workstream.	Link to workstream page to create intake rules.
Error	No valid assignment definition for the queue: Without an assignment method, agents in the queue can’t be assigned work items. Select an assignment method. If it’s a custom method, ensure that it contains rules.	Link to queue page to add custom assignment rule.
Warning	Unsupported automatic record creation rules in use: Automatic record creation rules defined in the web client aren't supported. Use the migration tool to update the rules in the Unified Interface experience, and activate the new rule version.	Link to migration tool for automatic record creation.
Warning	Unsupported service level agreement rules in use: Service level agreement rules defined in the web client aren't supported. Use the migration tool to update the rules in the Unified Interface experience, and delete the old rule version.	Link to the migration tool for service level agreements.

Incoming email isn't converted to a case

Article • 06/13/2023

This article provides a resolution for the issue where an incoming email isn't converted to a case in Dynamics 365 Customer Service. Also, to diagnose and fix the issues, you can use the **Activity monitor** available on the **Record creation and update rules** page, and configure the options to view skipped scenarios, failed scenarios, or all scenarios for a time period. For more information, see Manage activity monitor to review and track rules.

Symptoms

Email-to-case conversion isn't working in Dynamics 365 Customer Service.

Cause 1: The email isn't syncing with the system

Resolution

To check whether the email is syncing with the system, navigate to **Activities** and look for the email activity. If email isn't syncing with the system, there may be an issue with the email router or server-side sync configuration.

Cause 2: Email activity is created but related QueueItem isn't found

Resolution

You need to check whether the email activity is created but a related QueueItem isn't found. If an active **Automatic Record Creation and Update Rule** exists for a specific queue, the QueueItem is marked as inactive and disappears from the QueueItem view.

Cause 3: The email is coming from an unknown sender

Resolution

If the email is coming from an unknown sender, check for the **Create contact for unknown sender** option. Go to the **Automatic Record Creation and Update Rule** configuration and check whether the **Create contact for unknown sender** box is selected. If the **Create contact for unknown sender** check box isn't selected, an incoming email from an unknown sender won't be converted to a case.

Cause 4: Automatic Record Creation and Update Rule configuration issues

Resolution

You need to check whether the **Automatic Record Creation and Update Rule** feature is configured properly by going to system jobs and checking for a failure message. For more information about configuration failure scenarios and resolution for sample configuration failure, see Troubleshoot common email error messages.

> **Note**
>
> The **Customer** field in the case entity can be a contact or an account. If a matching incoming email address isn't found for a contact or an account, and the **Create contact for unknown sender** check box is selected, the system creates a contact for the incoming email address and links it to the case's **Customer** field.

Cause 5: The contact and account have different email addresses

Resolution

You need to check whether the contact and account have the same incoming email address. A case that's created from an incoming email will resolve the **Customer** field on the case as **Account**.

Cause 6: The email is sent using only the Bcc field

Resolution

To fix this issue, ensure the queue email address is in the **To** or **Cc** fields of incoming emails. Emails sent with the queue address in the **Bcc** field won't be processed.

Cause 7: The email is a reply to the tracked email

Resolution

If the incoming email is in response to an already tracked email associated with a case, no new case will be created. If the **InReplyTo** value matches the **MessageId** of an email that's already in Dynamics 365, server-side synchronization correlates the new email with the existing one, and the "Automatic record creation and Update" rule skips case creation for the new email. For more information, see Specify which emails are automatically tracked.

Cause 8: Contact creation failed when the incoming email is from an unknown sender

Resolution

By default, a contact for an unknown email sender is created with the email owner context. A case might not get created if the email owner doesn't have the required permissions. Alternatively, you may choose to use the rule owner permissions to create the new contact by configuring the `msdyn_ArcCreateContactWithRuleOwner` environment variable. For more information, see Create contacts for unknown senders using rule owner context.

Cause 9: No active "Automatic record creation and Update" rule exists for the queue to which the email was sent

Resolution

Navigate to the "Automatic record creation and Update" rules and ensure that an active "Automatic record creation and Update" rule exists for the queue to which the email was sent. If no "Automatic record creation and Update" rule exists for the queue to which

the email was sent, a case won't be created since there won't be any matching rule and condition.

Can't delete a managed solution consisting of an SLA-enabled entity

Article • 05/25/2023

This article provides a resolution for the issue where you can't delete a managed solution consisting of a service-level agreement (SLA) enabled entity in Dynamics 365 Customer Service.

Symptoms

You can't delete a managed solution that contains an entity with an SLA enabled on it. This entity has been created as part of a previously imported solution.

Cause

Once enabled on an entity, an SLA can't be disabled.

Use this example to understand the issue:

1. Create a new solution in *Org1* and name it *Field solution*.
2. Create a new entity in *Field solution* and name it *Field work*.
3. Export *Field solution* as a managed solution.
4. Import *Field solution* into a new org named *Org2*.

Next:

1. Create another solution in *Org1* and name it *Delta Field solution*.
2. Associate the entity *Field work* with *Delta Field solution*. Enable the SLA on the entity.
3. Export *Delta Field solution* as a managed solution.
4. Import *Delta Field solution* into *Org2*.

Now, if you try to delete *Delta Field solution* from Org2, you can't delete it because it has a *Field work* entity associated with it that has the SLA enabled.

Resolution

To delete a managed solution with an SLA-enabled entity, you need to first delete the previously imported managed solution that created the entity entry. This action ensures

that the entity entry is deleted. Then, you can create the entity again or reimport the managed solution.

To delete *Delta Field solution* in *Org2*, delete *Field solution* first.

Field solution can be deleted because the entity associated with it —*Field work*— doesn't have SLA enabled. Deleting *Field solution* ensures that both the SLA configuration and the entity are deleted.

> **Note**
>
> This workaround won't work for the out-of-the-box (OOB) entities because you can't delete OOB entities or managed solutions that have OOB entities associated with them.

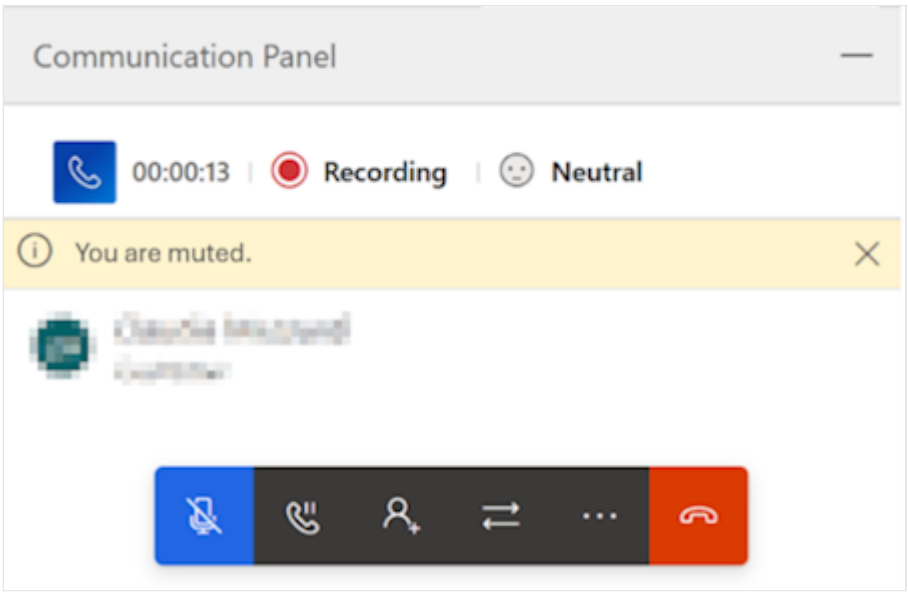
Use diagnostic messages to troubleshoot issues in voice calls

Article • 09/15/2023

When your agents are on a voice call, they might sometimes see warning or error messages on the **Communication Panel**. These messages will help them understand the issues that are affecting their call experience. Agents can use the information in the message to diagnose and resolve the issues themselves. For example, if an agent speaks when the microphone is muted, a "You are muted" message occurs to let them consider unmuting the microphone.



Troubleshoot network issues

The following table lists the warning messages that appear when your agents have network issues in their voice calls. These messages help agents diagnose and resolve the issues. Use the network values to find more information about the cause and mitigation steps described in Azure Communication Services.

Message	Description	Network value
Your network is causing poor call quality. Try switching to a better network, or moving closer to a Wi-Fi access point.	Appears when the network connection is lost and the system tries to reconnect to the network.	`networkReconnect`
Your network is causing poor call quality. Try switching to a better	Appears when the incoming streaming quality is poor.	`networkReceiveQuality`

Message	Description	Network value
network, or moving closer to a Wi-Fi access point.		
Your network is causing poor call quality. Try switching to a better network, or moving closer to a Wi-Fi access point.	Appears when the outgoing streaming quality is poor.	`networkSendQuality`

Troubleshoot device issues

The following table lists the messages that appear when your agents have issues with their audio devices in voice calls. Your agents can use the information to take action and resolve the problem. Use the audio values to find more information about the cause and mitigation steps described in Azure Communication Services.

Message	Description	Audio value
No speakers detected. Try connecting one to receive call audio.	Appears when no audio output device or speaker is detected on the user's system.	`noSpeakerDevicesEnumerated`
You are muted.	Appears when an agent is speaking while it's muted.	`speakingWhileMicrophoneIsMuted`
No microphone detected. Try connecting one so that others can hear you.	Appears when no microphone is detected on the agent's system.	`noMicrophoneDevicesEnumerated`
Your microphone is not working. On the communication panel, select More -> Device settings to connect to a different device or try reconnecting this one.	Appears when the microphone is muted unexpectedly or is not functioning.	`microphoneMuteUnexpectedly` `microphoneNotFunctioning`

Troubleshoot issues in Customer Service and Omnichannel for Customer Service using Solution Health Hub

Article • 05/25/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

Introduction

You can use Solution Health Hub to get a better picture of the state of your Power Platform environment and detect any issues it might have. Solution Health Hub runs rules within an instance to validate the environment's configuration, which might change over time through natural system operations. The rules are specific to Dynamics 365 Customer Service and Omnichannel for Customer Service. You can run the rules on demand when you run into an issue. Some rules are automatically triggered when Dynamics 365 Customer Service or Omnichannel for Customer Service is installed or updated. You can regularly run the rule sets to monitor the health of your environment.

Here are some issues that the Solution Health Hub app helps detect:

- **Customer Service**
  - Critical Customer Service processes that are deactivated.
  - Processes that will cause an upgrade to fail are assigned to disabled users.
  - Presence of customized web resources that might lead to runtime issues.
- **Omnichannel for Customer Service**
  - Missed or wrong configurations.
  - Queues with no agents.
  - Agents with no capacity.
  - Agents who aren't part of any queues.
  - Workstream configuration problems.

Prerequisites

To run the Dynamics 365 Customer Service rules, the following prerequisites must be met:

- The Customer Service Hub app is installed in your environment.
- You should have either the CSR Manager or System Administrator security role.

To run the Omnichannel for Customer Service rules, you must have Omnichannel for Customer Service installed in your environment.

Run a health check

Take the following steps to run an analysis job to check for issues in Omnichannel for Customer Service:

1. Open the Solution Health Hub app.
2. Select **Analysis Jobs** > **New**.
3. In the **Create Analysis Job** dialog box, in **Rule Set**, select **Omnichannel** or **Customer Service**, and then select **OK**.

> **Note**
>
> For Dynamics 365 Customer Service, you can run the health check from **Analysis Jobs** in the **Service Management** site map of Customer Service Hub.

Analyze the health check results

After the analysis job completes its run, the results are displayed on the **Job Details** tab.

The following information is available:

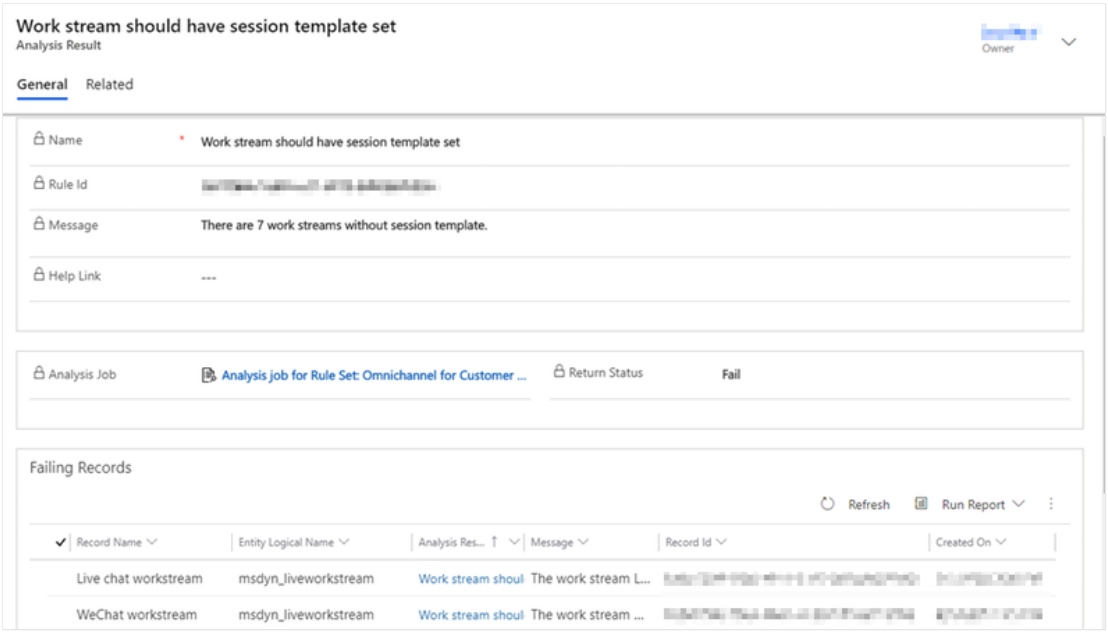
- **Name**: The name of the analysis job.
- **Status**: The status of the run.
- **Start Time**: The date and time when the job was started.
- **End Time**: The date and time when the job completed its run.
- **Failed Rules**: The number of rules that failed.
- **Warnings**: The number of rules that resulted in warnings.
- **Passed Rules**: The number of rules that passed successfully.
- **Total Rules**: The number of available rules.
- **Rule Run Count**: The count of rules that have been run.

The details of the results are displayed in a table as follows:

- **Name**: The name of the rule.
- **Message**: A brief summary of the result.
- **Return Status**: Whether the rule passed, failed, or returned a warning.
- **Severity**: The severity level.

You can do the following:

1. Select a rule for which the status appears as failed. The analysis results of the failed objects are displayed in the **Failing Records** area.



2. Optionally, select the **Summary** tab for an overview of the results.

> **Note**
>
> If you see any discrepancy in the health check results, rerun the job.

Out-of-the-box rule sets for Dynamics 365 Customer Service

The out-of-the-box rules for Dynamics 365 Customer Service are as follows. These rules can't be edited.

Rule	What the rule checks for	Reason for failure and fix
Automatic Record Creation process definitions in draft status	Checks whether `ExecutePrimaryCreatePostActions` and `ExecuteARC` custom actions are in the active or draft state when a rule for creating records automatically is being used.	The processes to create records are deactivated automatically. Review whether the deactivated processes are required for your business logic and reactivate them if necessary. You can select the rule and then select **Resolve**, which will activate the processes.

Rule	What the rule checks for	Reason for failure and fix
Check if activity monitor for automatic record creation is enabled.	Check for `msdyn_ArcActivityMonitorForFailedScenarios` and `msdyn_ArcActivityMonitorForSkippedScenarios` flag values to decide whether activity monitor is enabled.	Activity monitor isn't enabled for creating records automatically. Enable the activity monitor to monitor rules to know whether they succeeded or failed. For more information, see Use activity monitor to review and track rules.
Check if `autoRouteToOwnerQueue` for the `Email` entity is enabled.	Checks whether rules to create records automatically are enabled and autoroute to owner queue is set on the `Email` entity.	The rule for creating records automatically might not be triggered to the right user if the **Automatically move records to owner's default queue** check box is selected for the Email entity. For more information, see Entity records routing.
Check if Customer Service forms are from unmanaged layer.	The rule fails when Customer Service forms are found in the unmanaged layer.	Customer Service forms are found in the active layer. Because unmanaged solutions overwrite Customer Service metadata fixes, we recommend that you don't place the system forms in active layers in a production environment.

Check workflow type for convert rule and convert rule items	• **Modern rule**: Associated workflow should be a Power Automate flow
	• **Legacy rule**: Associated workflow should be a legacy workflow
	• Workflow state check
	  ◦ **Active rule**: Associated workflow on the rule and rule item should be present and in active state.
	  ◦ **Draft rule**: The rule for creating records automatically should have no associated workflow; the rule item should have an associated workflow in the draft state.
		• **Workflow type issue**: You've performed an activate or deactivate action on a legacy rule in Unified Interface form.
		• **Workflow type issue**: Created rule items for a modern rule in the legacy experience.
		• **Workflow state issue**: You've turned on or off flow in Power Automate.
		
		How to fix the issue
		
		• **Workflow state issue**: should be automatically corrected for the customer to update the relevant workflow to its required state.
		• **Workflow type issue**: contact Microsoft Support
		
		We recommend the following:
		
		• Rules created in Unified Interface should only be edited, activated, or deactivated in Unified Interface experience.
		• Rules created in legacy experience should only be edited, activated, or deactivated in legacy experience.
		• In Power Automate, do not manually turn on or off flows to create records automatically.

ConditionXml format check	• **Modern rule**: The `conditionxml` attribute value of all the related rule items should be in fetchxml format. • **Legacy rule**: The `conditionxml` attribute value of all the related rule items should be in conditionxml format.	• Format is mismatched in the rule type for creating records automatically. • You've performed the activate or deactivate action on a legacy rule in the Unified Interface form experience. • You've created rule items of a modern rule in the legacy experience. We recommend that the rules created in the Unified Interface app and legacy app be edited, activated, or deactivated in the corresponding app, respectively, and do not use the apps interchangeably.
Custom customizations on the Customer Service Hub site map	Checks for customizations on the Customer Service Hub site map.	Fails when the site map is customized. For more information, see Merge site map customizations.
Custom customizations on the Customer Service Workspace site map	Checks for customizations on the Customer Service workspace site map.	Fails when the site map is customized. For more information, see Merge site map customizations.
Customized option sets	Detects whether any option set in Customer Service has been customized. Customizing option sets can lead to unexpected behavior for unintended option sets.	Option set has been modified by customization. Manually remove customizations from the Customer Service option set if they aren't required for your business.
Deleted Sdk message processing steps	Checks whether any SDK message processing steps are deleted. Deleted SDK message processing steps will lead to incorrect behavior when using Customer Service.	Fails if any of the shipped Customer Service SDK message processing steps have been deleted from the system. Contact Microsoft Support to resolve the issue.

Rule	What the rule checks for	Reason for failure and fix
Disabled Sdk message processing steps	Checks whether any SDK message processing is disabled. Disabled SDK message processing steps will lead to incorrect behavior when using Customer Service.	`SdkMessageProcessingSteps` are deactivated. Review if the disabled `SdkMessageProcessingSteps` processes are required for your business logic and reactivate them if necessary.
Process definitions in draft status	Checks whether any process definitions related to Customer Service are in draft status. **Note**: The `ManageContract`, `Contractline`, and `Entitlement` workflows are excluded from the validation check when they are in the draft state.	Processes are deactivated. Customer Service might not work correctly when processes are disabled. To resolve the issue, reactivate process definition from customizations.
Process definitions owned by disabled users	Checks whether any process definitions in the system are assigned to disabled users.	Processes will fail because they are owned by disabled users. Make sure that all workflows are assigned to users who have the required permissions. To resolve the issue, reactivate the user accounts that own workflows or assign the workflows to another user account with the proper security privileges.
Validate Email response template type for Modern Automatic Record Creation	The template type code of the auto-response email template set on a rule should match the primary entity set on all its rule items: • `responsetemplateid` stores the auto-response email template on the `convertrule` entity. • `templatetypecode` stores the template type code on the email template entity. • `primarycreateentitylogicalname` stores the primary create entity on the `convertruleitem` entity.	The template type code of the auto-response email template set on a rule didn't match with the primary entity set on its rule items. As a result, the automatic response won't be sent because the template type didn't match the rule item primary action entity type. But won't cause failure.
Waiting workflow instances are owned by disabled users	Detects waiting workflow instances that are assigned to disabled users. These workflows will fail to correctly generate the records that they are supposed to generate.	The workflows are assigned to disabled users. To resolve the issue, reactivate the user accounts that own the workflows or assign the workflows to another user account with the proper security privileges.

Out-of-the-box rule sets for Omnichannel for Customer Service

When you run the analysis job, the following out-of-the-box rules are run. These rules can't be edited.

Rule	Description
Agents should have capacity	Verifies that capacity has been defined for agents. For more information, see Manage users.
Bots should have capacity	Verifies that the bot's capacity is greater than zero. For more information, see Configure a bot.
Bots shouldn't have potentially low capacity	Verifies that the bot's capacity is at least a hundred times the capacity of the work stream.
Custom channel configuration should have work stream	Verifies that all custom channels have an active work stream. For more information, see Configure a custom channel.
Custom channel settings should have all required fields	Verifies that custom channel settings have the messaging endpoint URL field.
Facebook page configuration should have work stream	Verifies that all Facebook pages have an active work stream. For more information, see Configure a Facebook channel.
Facebook settings should have all required fields	Verifies that Facebook channel settings have the messaging endpoint URL field.
Line channel configuration should have work stream	Verifies that all LINE channel configurations have an active work stream. For more information, see Configure a LINE channel.
Line settings should have all required fields	Verifies that the LINE settings webhook URL isn't empty.
Live chat channel configuration should have work stream	Verifies that Live Chat has an active work stream. For more information, see Configure a chat channel.

Rule	Description
Omnichannel service endpoint should be configured	Verifies that the underlying services needed for the functioning of Omnichannel for Customer Service are configured correctly. For more information, see Provisioning Omnichannel for Customer Service.
Queues should have agents	Verifies that the queues that are assigned to the work streams have agents assigned. For more information, see Manage queues.
SDK message/plugins should be active	Verifies that the SDK messages or plug-ins are active. For more information, see Remove deactivated or disabled customizations.
SMS channel configuration should have work stream	Verifies that the SMS channel has an active work stream. For more information, see Configure an SMS channel for TeleSign and Configure an SMS channel for Twilio.
SMS settings should have all required fields	Verifies that SMS settings don't have empty customer ID and API key fields.
Teams channel configuration should have work stream	Verifies that the Microsoft Teams channel configuration has an active work stream. For more information, see Configure a Microsoft Teams channel.
Teams settings should have all required fields	Verifies that the bot ID field isn't missing from the Teams settings.
WeChat channel configuration should have work stream	Verifies that all WeChat channel configurations have an active work stream.
WeChat settings should have all required fields	Verifies that the **IP allowlist** and **Server address (URL)** fields aren't empty in the WeChat settings. For more information, see Configure a WeChat channel.
WhatsApp channel configuration should have work stream	Verifies that all WhatsApp phone numbers have an active work stream. For more information, see Configure a WhatsApp channel.
WhatsApp settings should have all required fields	Verifies that WhatsApp settings have a valid Twilio inbound URL and validation hasn't failed.
Work stream capacity should be less than agents	Verifies that the capacity defined for agents is more than that defined for the work streams. For more information, see Understand work streams.
Work stream should have notification templates set	Verifies that notification templates have been set for work streams. For more information, see Associate templates with work streams.
Work stream should have session template set	Verifies that session templates have been set for work streams. For more information, see Associate templates with work streams.
Work stream shouldn't have duplicate context variables	Verifies that duplicate context variables haven't been defined for work streams. For more information, see Create a work stream.
Work stream shouldn't have empty routing rules above rules with condition	Verifies that empty routing rules haven't been defined for a work stream that prevents routing rules with a lower priority from running. For more information, see Create and manage routing rules.
Work stream with push mode shouldn't allow offline mode	Verifies that "Offline" isn't an allowed presence for work streams that have push mode enabled. For more information, see Create a work stream.

Integrated search provider data on the Insights tab isn't updated after a scheduled refresh

Article • 07/10/2023

This article provides a resolution for the issue where the search provider may have been configured incorrectly in Dynamics 365 Customer Service.

Symptoms

Data isn't updated on the **Insights** tab for integrated search providers even after the scheduled refresh interval time.

Resolution

Take the following troubleshooting steps to diagnose and fix the issue:

1. Make sure the provider's root URL and sitemap URL are correct. Browse through the URLs to confirm they're valid addresses.
2. Make sure the **External Reference Id** field is mapped to a unique field in the source property. The ID is expected to be unique. Mapping this field to nonunique fields in the source will cause issues when articles are ingested.
3. Make sure you haven't set the **Refresh interval** to **No refresh**.
4. If the source is authenticated, make sure the secret you provided is correct.

If the issue persists, contact Microsoft Support to raise a ticket.

See also

For more information about managing a search provider, see Manage integrated search providers.

Report issues in Omnichannel for Customer Service

Article • 06/02/2021

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

The report issues feature in the Omnichannel for Customer Service app allows you to capture a diagnostic report of the issues and share it with Microsoft.

> **Important**
>
> The report issues feature is not supported in Omnichannel for Customer Service on Unified Service Desk.

You can copy the information while communicating with a customer by using one of the following keyboard shortcuts.

- **Ctrl** + **Shift** + **Alt** + **d**
- **Ctrl** + **Shift** + **Alt** + **D**

Capture diagnostic report

1. Sign in to Omnichannel for Customer Service.
2. Use the keyboard shortcut to copy the information. Repeat the step if a message indicates that the copy action was unsuccessful.
3. Open a notepad in your computer.
4. Paste the diagnostic report in the notepad, and save.
5. Share the diagnostic report when you contact Microsoft support.

Diagnostic report information

The diagnostic report doesn't contain any of your personal information and contains the following information that's specific to Omnichannel for Customer Service.

Name	Display name in the report
Timestamp	timestamp
Provider name	activeProviderName
Client URL	ClientUrl
App URL	AppUrl
Organization locale ID	OrgLcid
Organization unique name	OrgUniqueName
Organization Id	OrgId
User locale Id	UserLcid
User roles Id	User roles
CRM version	crmVersion
Tenant Id	TenantId

If you, as an agent or supervisor, are in a session with a customer, and capture the report, then with the details mentioned in the preceding table, the following global context and conversation context details are also copied.

Name	Display name in the report
Timestamp	timestamp
Provider name	activeProviderName
Client URL	ClientUrl
App URL	AppUrl
Organization locale Id	OrgLcid
Organization unique name	OrgUniqueName
Organization Id	OrgId
User locale Id	UserLcid
User roles Id	User roles

Name	Display name in the report
CRM version	crmVersion
Tenant Id	TenantId
Omnichannel API URL	ocApiUrl
Conversation Id	conversationId
Session Id	sessionId
Conversation Type	conversationType
Transaction Id	transactionId
Transaction parameters	transactionParameters
Live work item Id	liveWorkItemId
Channel Id	channelId

Best practices to use Omnichannel for Customer Service

Share feedback for Customer Service

Article • 04/04/2022

You can share feedback about Customer Service, such as the features, UI, and issues, by using the feedback option.

Share feedback

You can share product feedback in Customer Service Hub and Customer Service workspace.

To share feedback

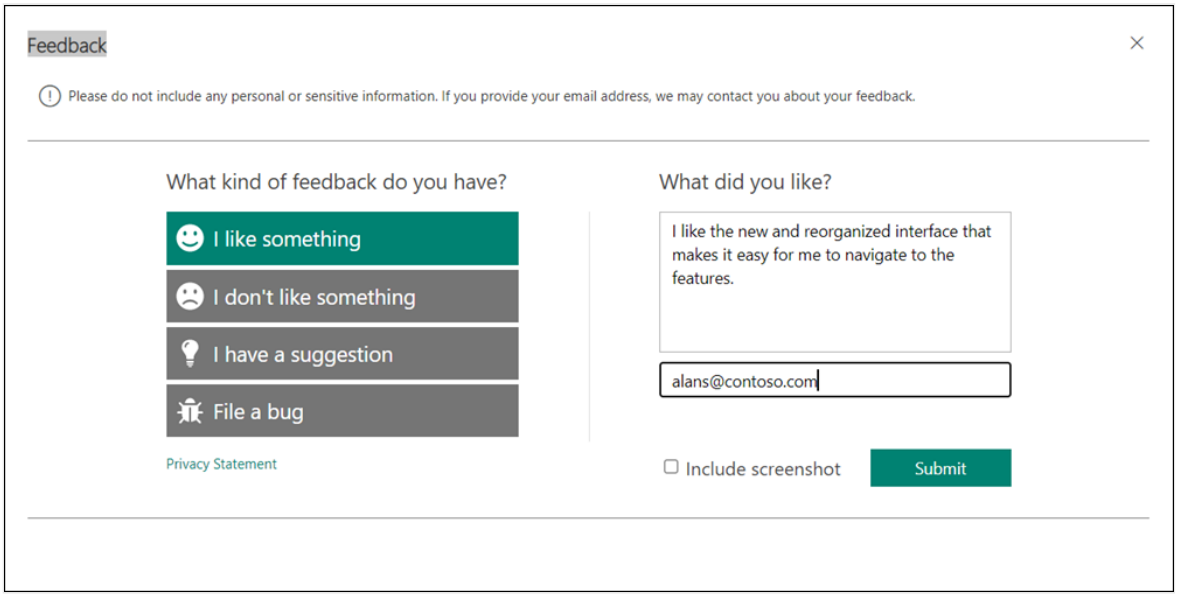
1. In one of the apps, on the top-right corner of the navigation bar, select the **Send Feedback** icon. The **Feedback** dialog displays the following options:

   - I like something
   - I don't like something
   - I have a suggestion
   - File a bug

2. Select one of the options. The app displays the <*label*> box.

3. Optionally, you can do the following:

   - Use the box to add details.
   - Share the mail ID of your choice; Microsoft Support might use the mail ID to contact you.
   - Attach a screenshot.



4. Select **Submit**.

FAQ about Customer Service admin center

Article • 10/26/2022

Overview

This article contains the frequently asked questions (FAQ) that you as an administrator might have about the Customer Service admin center app.

What's the difference between Customer Service admin center and Omnichannel admin center?

Customer Service admin center unifies all the administration settings in Customer Service Hub, Omnichannel admin center, and app profile manager. The site map is task oriented, with overview pages and feature landing pages to easily locate each capability. The user experience is consolidated and improved, and you don't need to migrate any data. Try the new app for centrally managing the features.

Can I customize this new application?

Similar to other apps, you can use the App designer to customize the site map entries. If you have custom entities to manage different aspects of your business, then you can add them to the Customer Service admin center site map to avoid using a separate app. To avoid conflicts with the out-of-the-box site map entries, we recommend that you create a new sub area to add your site map entries.

When do you plan to deprecate the existing admin experience?

Customer service admin center has been generally available since April 2022. We've announced the deprecation and subsequent end of support for Omnichannel admin center, service management experience in Customer Service Hub, and app profile manager. We recommend that you start using the Customer Service admin center app for the seamless benefits it offers. More information: Deprecations in Customer Service

How do I move from the existing admin apps to Customer Service admin center?

You can start using Customer Service admin center immediately if you don't have any customizations in your existing admin apps. However, if you have any customizations, you'll need to redo them in Customer Service admin center using the App designer.

Why do I see deprecated apps in the organization?

The Omnichannel Administration and Omnichannel admin center apps have been deprecated and therefore are hidden by default. However, the apps will be visible in Power Apps.

FAQ about unified routing in Customer Service, Omnichannel for Customer Service

Article • 08/11/2023

> **Important**
>
> Support for the Omnichannel Administration app ended on April 30, 2022. The app will be removed in July 2023. We recommend that you use the Customer Service admin center app to configure the latest features, such as unified routing and voice channel. More information: **Omnichannel Administration app is deprecated**

Overview

This topic contains the FAQs that you as an administrator, supervisor, or agent might have about unified routing.

General

What SKUs must I have to get unified routing?

See prerequisites for licensing information.

What will happen to my current workstreams after unified routing is installed?

For messaging channels, use the migration utility to migrate the workstream and associated routing rules. For entity routing, you'll configure new workstreams and rules in unified routing. More information: Migrate workstreams created in Omnichannel Administration.

What are the implications when migration is in progress?

There is no downtime involved when you are migrating the workstreams, but it's recommended that you perform the migration during low load or off hours.

Why do I see workstreams that I didn't create in Omnichannel Administration?

These workstreams were created either in the Customer Service admin center or Customer Service Hub app. In the Omnichannel Administration app, you'll see all the workstreams irrespective of the app that has been used to create them. We recommend that you manage the workstreams in the same app that you used to create them.

How do I migrate my configurations from the Omnichannel Administration app to the Customer Service admin center app?

To migrate the messaging workstreams, you can use the Unified Routing Migration Application. For information on the migration tool and instructions, see Migrate workstreams created in Omnichannel Administration.

> **Note**
>
> After you migrate the workstreams, you'll be able to manage them in the Customer Service admin center app. We recommend that you familiarize yourself with the app before migrating. More information: **Get started with Customer Service admin center**.

Can I manage my workstreams in the Omnichannel Administration app post migration?

No. Although you will see the migrated workstreams in the old admin app as well, we recommend that you manage the migrated workstreams in the Customer Service admin center app.

What are the implications when I start the migration process for the workstreams?

There is no downtime when you are migrating the workstreams, but we recommend that you perform the migration during low load or off work hours.

Is it possible to roll back the migration?

To roll back the migration, you will need to contact Microsoft Support.

How can I migrate the entity routing workstreams?

Entity routing workstreams must be recreated in Customer Service admin center and the rules must be manually recreated in the new workstream.

If you need further help, contact Microsoft Support.

Can I create workstreams for routing records in the Omnichannel Administration app after upgrading Omnichannel for Customer Service to 2021 release wave 1?

No. After upgrade, you'll no longer be able to create workstreams for routing records because they won't work as expected. We recommend that you start using the Customer Service admin center app to create and manage routing of records.

Will unified routing support activity routing?

Yes, unified routing supports routing activities, including email.

What happens to my existing queues after I migrate to unified routing?

The existing queues will be automatically migrated to unified routing.

Can I route any record type by using basic routing?

No. Basic routing can be used for cases only. To route any record type, use unified routing.

Is there a priority among queues? Can we use the field Group Number or Priority? Does it affect the order of the case assignment?

No. There's no priority among queues. However, you can prioritize records within a queue.

Can I pause the assignment of a case?

No. It's not possible to pause the assignment of a case.

Can agents pick work items of records to which they don't have permissions?

Yes, agents can pick the work item even if they don't have permission to access the record. However, they can't view the details and the conversation will be closed. For more information, see the note in Set up record routing.

Can supervisors assign work items pertaining to inaccessible records?

Yes. However, the conversation will be closed if agents don't have sufficient permission to access the records.

Can I export a unified routing configuration and sign in to another environment?

Yes, you can export a configuration with unified routing content for the record type and live chat channel. For more information, see the following articles:

- Migrate data for the record channel
- Migrate data for the live chat channel

I have two workstreams (W1, W2) and four queues (Q1, Q2, Q3, Q4) and a case (C1) is assigned to Q2. Is it possible to now reassign C1 to Q3?

Yes. It's possible to reassign a case to another queue. On the case form, select **Save and route** to reassign the work item from one queue to another queue.

Why am I not able to see the Keep same agent for entire conversation toggle in my Work distribution settings for a workstream related to cases?

A case remains with the agent that it was initially assigned to and therefore the corresponding workstream for cases doesn't have the agent affinity toggle.

Can I access Omnichannel Ongoing Conversations Dashboard and Omnichannel Intraday Insights in Customer Service workspace?

Yes, you can access Omnichannel Ongoing Conversations Dashboard and Omnichannel Intraday Insights in Customer Service workspace if you have the Chat for Dynamics 365 Customer Service or Digital Messaging for Dynamics 365 Customer Service license.

How are unassigned work items in a queue handled if no matching agent is found?

The unassigned work item remains in the queue until you manually assign it to an agent or route it to another queue. More information: How assignment rulesets work

Work item assignment

Can I increase the limit on assignment offer of work items to agents?

Yes, you can update the limit. More information: How the limit on offering a work item repeatedly to an agent works

Route to most-idle agent

For which channels is routing to most-idle agent (preview) available?

In the preview release, the feature is available for the voice channel only.

Is presence used in determining the most-idle agent?

No, presence isn't used. Only capacity release information is taken into account.

Does the agent sign-in time affect in the calculation of the most-idle agent?

The agent’s last capacity release time only affects the idle time used by the most-idle assignment method. The agent sign-in times don't impact the capacity release time.

How is a tie-breaker scenario resolved if two or more agents match the idle time?

If the last capacity release time, which is the time since the agent is idle, is the same for two matching agents, then assignment will be done in a round-robin manner.

Can I see diagnostics for routing to the most-idle agent?

Yes, the assignment method stage displays the assignment method that's used.

Intelligent skill finder

Will intelligent skill finder be available in all geographical regions?

Intelligent skill finder requires AI Builder to create and train the machine learning model. If AI Builder is not available in the customer region where unified routing is, the customer will get a generic error when trying to set up the model.

Can I use intelligent skill finder with email activities?

Yes, intelligent skill finder can be enabled for any entity that is enabled for routing by using any text-based field. For email body skill finder, an additional step is required because email body (description) includes HTML tags that can impact the machine learning model. You'll extract the text from HTML, copy it into another text field, and then configure the machine learning model against the new field.

How do I make sure that the right skills are attached to the work items when the machine learning-based model is in use?

- Ensure that agents are trained to attach correct skills, review, and correct any incorrectly attached skills.
- Review the skill finder model to make sure that the training data is correct and retrain the model periodically to improve it.

Capacity profiles

I have a work item labeled with two capacity profiles and three agents who match at varying levels. Which agent is eligible for assignment?

If two of the agents match one each of the required capacity profiles and the third agent matches on both the required capacity profiles, then the work item is assigned to the third agent. More information: Use capacity profiles

FAQ on managing cases

Article • 06/06/2023

A few answers to common questions on the various scenarios in managing cases are listed here.

General

How can I create a case when the contact isn't linked to the customer organization?

Out of the box, agents can't create a case because the contact isn't associated with the customer organization. However, you can customize case forms and remove the validation on contact and allow unrelated contacts be linked with the case.

Why can I use only few columns to search in the Case view?

To search on columns of your choice, make sure that the quick find search is configured for the required search parameters. More information: Use quick find search.

Why do agents get permission errors when they try to access, create, delete, or update a case?

If the role assigned to agents is missing security privileges, permission errors are displayed when they perform case actions. For example, the following error is displayed when an agent tries to access a case, and the role assigned to the agent is missing read privileges:

Principal user (Id= <GUID>, type=8, roleCount=5, privilegeCount=465, accessMode=0), is missing prvReadincident privilege (Id=<GUID>) on OTC=112 for entity 'incident'. context.Caller=<GUID>

To resolve the error, ensure that role assigned to the agent has read access to the case entity. More information, see: Security roles and privileges. You can also refer to the out-of-the-box Customer Service Representative role before you create custom roles or modify permissions of roles assigned to agents. More information: Roles and personas

FAQ on resolving cases

Why can't I see Billable time, Remarks, or Total time fields on the case resolution dialog box?

As part of April 2023 wave, by default, agents see the minimal case resolution dialog. The minimal case resolution dialog displays the **Resolution Type** and **Resolution** only. You can disable the minimal case resolution dialog and switch to the legacy experience. More information: Disable the minimal case resolution dialog.

> **Note**
>
> - You can revert to the legacy case resolution dialog only if the **Case settings** > **Other settings** > **Resolve case dialog** is set to **Standard dialog** in Customer Service admin center.
> - If **Resolve case dialog** is set to **Customizable dialog** or **Quick create dialog**, to add **Duration**, **Billable Time**, **Total Time** and other customizations, perform the steps in **Add or remove fields from the case resolution dialog**.

Can I update cases after they're resolved or canceled?

Yes, agents can update the case description or other information after the case has been resolved or canceled. You must configure and run flows in Power Automate or an API to update the case without having to reopen the case records. More information: Allow updates for resolved and canceled cases.

Why isn't the billable time isn't automatically updated on the case resolution dialog?

Billable time is the amount of time the agent spent on the case and can be billed to the customer. The application automatically calculates and displays the **Billable Time** value on the case resolution dialog, only if the **Total Time** field is also available on the dialog. If **Total Time** isn't displayed, agents have to manually add the billable time. More information: Add or remove fields from the case resolution dialog.

Can I customize the case resolution dialog?

Yes. More information: Modify the case resolution dialog.

Why can't I see the custom value I added to Case resolution type field in the case resolution dialog?

Make sure that you've added the custom value to both the **Case** and **Case Resolution** entity for the custom value to be displayed on the case resolution dialog. More information: Add custom values to the case resolution dialog.

Why can't I set the Case Status field on a case to Resolved?

A case is resolved only when you select **Resolve case** on the command bar. You can't set the value of the **Case Status** field to **Resolved**. More information: Resolve a case.

Why do I see errors when I try to resolve a case?

Resolve a case isn't supported if **Regarding** is configured in **Case resolution dialog**, and agents will see errors if they try to resolve the case.

Enhanced case experience

I used the form selector on the Enhanced full case form to navigate to another form. Why can't I go back to the enhanced form?

The **ShowInFormSelector** option in Enhanced full case form is set to **False**, by default. Set **ShowInFormSelector** to **True**, to see the **Enhanced full case form** option in the form selector and navigate back to it.

Why are agents seeing the Enhanced case form when they create a case even if I haven't enabled Enhanced case experience?

If the **Enhanced full case form** has a higher form order than the default case form, agents might see the enhanced full case form even if you haven't enabled the enhanced case experience. If you'd like agents to see the default case experience, set the form order of the enhanced form lower than that of the default form. More information: Control access to model-driven app forms.

Why do my existing cases open in the default case form when I've enabled the enhanced case experience?

You must set the **Enhanced full case form** as the default form for your agents to see the enhanced full case form when they open an existing case. More information: Control access to model-driven app forms.

Resolve form issues

How can resolve the discrepancies in the number of buttons displayed on the command bar and ribbon issues in my case form?

If agents see buttons being hidden or extra buttons displayed on the form, you can use the **Command Checker** tool to troubleshoot the issue and also see what command will run when a button is clicked.

You can follow the steps in Troubleshooting ribbon issues in Power Apps to resolve ribbon issues.

How can I identify and resolve form issues effectively?

Form issues occur because of business rules, JavaScript, form events, or client API that administrators and makers have set. Monitor is a tool that can help you debug and diagnose problems, and can also help identify whether the issue experienced is designed out-of-the-box or due to a customization. More information: Use Monitor to troubleshoot model-driven app form behavior.

FAQ about automatic record creation

Article • 06/23/2023

FAQ about automatic record creation and activity monitor

The following section provides answers to questions about automatic record creation and activity monitor.

What are the scenarios in which the rule skips creating records automatically?

The automatic record creation rule doesn't create records in the following scenarios:

Reason 1

Email is from an unknown sender.

Resolution: On the **Advanced** tab of the **Record creation and update rule** page, select **Yes** for **Allow emails from unknown senders**, and choose an option in **Manage unknown senders by** according to your business needs. More information: Configure advanced settings for rules.

Reason 2

A resolved case is already connected with this record.

Resolution: On the **Advanced** tab of the **Record creation and update rule** page, select **Yes** for **Wait for a specific amount of time after the connected case has been resolved**, and specify the time in the **Select the amount of time** option. More information: Configure advanced settings for rules.

Reason 3

No valid entitlement for this email sender.

Resolution: On the **Advanced** tab of the **Record creation and update rule** page, select **No** for **Require a valid entitlement on the connect case**.

Reason 4

No applicable reason can be specified.

Resolution: If the reason is empty and the state says **Ready for workflow/Power automate**, and the case doesn't get created, then check system jobs if it's a legacy rule, or check flow runs if it's a modern rule.

Why do multiple cases get created from a single email?

Multiple cases can get created from a single email because of various reasons. Perform the following steps to check if multiple cases were created for an email.

1. Enable the activity monitor options: **Ready for Power Automate / Workflow** and **Skipped**. More information: Manage activity monitor to review and track rules
2. Send a new email to reproduce the issue.
3. You should see new activity monitor records in the grid for the new test email. Multiple activity monitor records for the email indicates that there are multiple queue items created for the same email that have triggered the ARC rule. You can also view which rule got triggered on each activity monitor row. The activity monitor records with the **Ready for Power Automate** state indicate that they have reached the flow and are likely to create a case in each of them. If you see the described behavior, perform the next step.
4. Perform the following steps to identify where the duplicate queue items are from:
   a. Rule item flow definition, to verify if the child flow adds the email to queue. Duplicate queue items can be created because of various reasons, such as a flow step calling **AddToQueue** bound action, queue item creation, another custom flow which the ARC flow calls from within, or a post operation plugin of an action performed within ARC flow, such as case creation.
   b. Email background processes, to verify if there are any custom workflows. You can do this during live debugging, where successful background processes get cleaned up. If you don't see any background processes for an email received, it doesn’t necessarily mean that there are no custom runs.
   c. Multiple queues with active ARC rule set up in the email's recipient or CC list. By default, an email gets added to all the queues which are listed as recipient and CC.

FAQ about modern automatic record creation

The following section provides answers to questions about migrated rule or flows in modern automatic record creation.

Why do I see two flows in Power Automate when I have an active modern or migrated ARC rule with only one rule item?

If you have an active rule with rule items, you'll see two flows, one with the name **ARC | rule name**, and another with the name **ARC: rule item name**. These flows are automatically turned on whenever you activate a rule. The ARC rule works only when these two flows are turned on.

For any inactive ARC rule, you'll see only one flow with the name **ARC: rule item name**. You won't see **ARC | rule name**, as this flow is created during rule activation. Even if you do see duplicate flows with the name **ARC | rule name** for the same rule, it won't cause any rule item issues. Even though they have the same name, only one of these flows is associated with the ARC rule, and only that flow will be invoked during run time.

What does the flow ARC | rule name do, and can I customize it?

The purpose of this flow is to evaluate all the rule item conditions to select the first match and invoke its associated flow. This flow shouldn't be customized.

I see that the ARC flow trigger is on the email update filtering on importsequencenumber attribute. Is it the reason that cases aren't being created for some emails?

No, all ARC flow triggers need to be on the update action with the **importsequencenumber** filtering attribute. This configuration isn't the reason if sometimes cases aren't being created for some emails.

Can I change the flow trigger to email create or remove the filtering attribute?

No, changing the flow trigger to the create action or removing the filtering attribute will lead the ARC flow to run during unexpected scenarios. This scenario will lead to infinite flow run issues.

When I export an ARC rule from an organization, what other required components do I need to include in the same solution?

You must include the rule item's associated flows with the ARC rules in the exported solution. You can include them by selecting the rule and then selecting **Add required components**. The rule item's associated flows need to be named as **ARC: rule item name**. Don't include flows with the name **ARC | rule name** in the solutions.

I imported a modern ARC rule with its associated flows. After I activate the imported rule, I see duplicated flows with name ARC | rule name in the Power Automate portal. Will this affect run-time issues like creating duplicate cases?

No, runtime or create duplicate cases won't be affected. The flow with name **ARC | rule name** is created during rule activation. The reason you'll see duplicates is because those duplicated flows were included in a managed solution and imported to the organization. See the previous question for what must be included while exporting or importing an ARC rule through solution.

Can I turn off or on ARC flows directly in the Power Automate portal?

No, don't turn off or on any ARC flows directly in the Power Automate portal. Only enable or disable ARC flows from Microsoft Dataverse.

Incoming email isn't converted to a case

FAQ on AI suggestions for cases and knowledge articles

Article • 05/27/2022

A few answers to common questions about the AI-suggested similar cases and knowledge articles are listed here.

I've enabled suggestions, but smart assist keeps showing me "No suggestions found" message

This might be caused by one of the following reasons:

- If it's the first time you've enabled suggestions, it might take up to 24 hours to complete the pre-processing from your existing published knowledge articles and resolved cases before suggestions will be displayed.
- The first time pre-process operation handles up to 1,500 published knowledge articles and 10,000 resolved cases from the most recent ones. Older articles and resolved cases aren't picked up from the first time pre-processing, so they won't be surfaced as suggestions.
- Suggestions are displayed only for active cases. Suggestions are updated when an active case is created or updated.
- The case title or description isn't clear enough to describe the problem, therefore, the model can't find articles or similar cases that match what's described.

I get an error message that the selected language isn't supported

You need to make sure that your language setting matches one of the languages supported by AI suggestions. More information: Language support for AI suggestions.

I get an error message that detected language doesn't match the language settings.

The AI model is used to detect the language of the cases and conversations. If the language detected doesn't match the language in the settings or if the language isn't

supported, suggestions aren't displayed. If the case or conversation doesn't contain enough information or contains mixed languages, the AI model may not be able to detect the language correctly. More information on how language support works, see Language support for AI suggestions.

I get an error message in Suggestions settings page, "We couldn't pre-process the case records or knowledge articles". What should I do?

Check whether all the prerequisites have been met for generating the models. Particularly:

- Make sure all required workflow processes installed with the feature are activated.
- Background operations are enabled when administration mode is enabled in the environment.For information about how to update the administration mode, go to Administration Mode.

If everything is correctly enabled but the error message still appears on the settings page the next day, contact Microsoft Support.

I've added more details about the problem in an active case, but the suggestions aren't refreshed at all

You're required to reopen the case form to see new suggestions.

I can't see smart assist with suggestions expanded at all when I open a case

Make sure that the case is opened in a session tab. To open it in a session tab, select the case by holding down **Shift** while clicking.

FAQ about Omnichannel for Customer Service

Article • 09/20/2023

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

> **Important**
>
> Support for the Omnichannel Administration app ended on April 30, 2022. The app will be removed in July 2023. We recommend that you use the Customer Service admin center app to configure the latest features, such as unified routing and voice channel. More information: **Omnichannel Administration app is deprecated**

General

What regions are supported?

See the list of supported regions at International availability of Microsoft Dynamics 365.

What platforms are supported?

You can find information about supported platforms and other prerequisites in Prerequisites and system requirements of Omnichannel for Customer Service.

Where can I submit an idea for a new feature or enhancement?

Submit your ideas and feedback on our Ideas forum.

Is there a forum for me to engage with and discuss issues with the broader community?

Yes, our Community Forum is the place where you can engage with the community at large.

How do I get help with the issues I face?

Contact Dynamics support to get help with your issues.

What channels are supported with Omnichannel for Customer Service?

Some of the supported channels are WeChat, LINE, and Facebook. For the complete list of supported channels, see Overview of channels.

Are Chat and the associated Omnichannel for Customer Service capabilities available as part of my Dynamics 365 Customer Service license?

No, Chat and related capabilities in Omnichannel for Customer Service require a separate add-in. For more information about licenses and pricing, see the Dynamics 365 licensing guide. You can also purchase add-ins on the Microsoft 365 admin center. More information: Buy add-ons

How do I get started?

If you would like to try out Chat for Dynamics 365 for free, sign up for a trial using these Instructions. Find Get started and Prerequisites for setting up Omnichannel for Customer Service in your organization.

Agent experience

In which apps can I use Chat for Dynamics 365?

You can use Chat in the Omnichannel for Customer Service and Customer Service workspace apps.

Can I work on cases along with chats?

Yes. You can work on cases alongside customer conversations in different sessions. You can open case sessions from the dashboards and grids using gestures. For more

information on starting a session, see Manage sessions in Omnichannel for Customer Service.

Can I work on third-party communication widgets built using Dynamics 365 Channel Integration Framework in the Omnichannel for Customer Service app module?

Omnichannel for Customer Service supports Chat for Dynamics 365 and SMS channels. You should continue to use the third-party communication widgets in the single-session Unified Interface apps like Customer Service Hub. Support for integrating third-party channels is available in Dynamics 365 Channel Integration Framework v2.

Can I open Omnichannel for Customer Service in multiple browser tabs and windows?

We recommend that you don't open Omnichannel for Customer Service in multiple browser tabs or windows. The app is inherently designed to help agents work in a multisession environment wherein each session has contextual application tabs. The sessions aren't synced across browser tabs.

What happens if I accidentally close the browser, refresh the entire page, or the browser crashes?

If you accidentally close your browsers, your currently open sessions and tabs opened inside them are lost; however, if you've entered some data on the model-driven forms where autosave has been enabled, they'll be saved into model-driven apps.

Ongoing chat and voice conversations appear on your Omnichannel Agent Dashboard. You can pick the chat or voice call from the dashboard and resume the conversation. The chat or voice call conversation is preserved, and you will be able to see the previous chat messages. If you were working on case sessions, you can reopen them using the gestures. For information on starting a session, see Manage sessions in Omnichannel for Customer Service.

Does consult only work for managers and supervisors?

No. You can consult with any available agent in the queue from which the chat originated. The consult list shows you agents in the queue who can take additional chat requests.

Can an agent who receives a consult also initiate a consult or transfer?

No. Only the primary agent of the chat can initiate transfers or consults. If the chat is transferred to another agent, the receiving agent becomes the primary agent and can initiate further transfers or consults.

Why are my agents not receiving any new conversations?

New conversation requests are assigned to an agent when:

- A new chat request comes in.
- The incoming chat request is assigned to a queue that matches the agent's assigned queues. You can see the queue and workstream for an incoming chat in the Omnichannel Conversation Dashboard.
- The agent presence is set to an **Allowed Presence** for the workstream.
- The agent has capacity to receive the incoming chat from the workstream. Remaining capacity can be checked by tallying up the items assigned on the agent's dashboard – including **Active** and **Wrap-up** – against the agent's configured maximum capacity.

Who can see internal messages?

Only agents and supervisors can see internal messages.

What does the timer in the communication panel represent?

The timer in the communication panel represents how long the current session tab has been open. If the chat has moved into a wrap-up state, the timer is reset and incremented accordingly to show the wrap-up time. If the conversation is closed and reopened later, the timer is reset.

How do I open chats on my dashboard?

For information about managing work items from your dashboard, see View agent dashboard and agent work items.

Where are conversations stored and how can I access them?

Conversations and sessions are stored as activity types within the model-driven apps. For more information, see View conversation and session activity types in the Model-driven apps.

FAQ on agent presence

This section helps answer some of the questions on how presence works.

When is the manual override of presence cleared?

The system clears your manual override when you become inactive or sign out from the application.

If the agent is inactive for less than 2.5 minutes, what does the system do?

If the agent is inactive for less than 2.5 minutes, the system will retain the manually overridden presence.

What happens to the agent presence when they resume work after showing as inactive?

When agents resume work after 2.5 minutes or more of inactivity, the system clears the earlier presence and calculates the presence afresh. We recommend that you refresh the browser after inactivity.

What factors are considered in presence refresh?

If the default presence set by the administrator is "Away" or "Offline", then the system will set the agent presence to the default setting. Otherwise, the system will calculate the presence based on the agent's used or released capacity.

Administrator experience

How does Automated Record Identification work with pre-chat fields?

If you're using multiple fields for automated record identification, they must all be an exact match. To learn more, see Automatically identify customers using pre-chat responses.

What do I do if my dashboards (Omnichannel Agent Dashboard, Omnichannel Conversation Dashboard, Tier 1 Dashboard, Tier 2 Dashboard) aren't showing up?

When you use the Omnichannel for Customer Service app on Unified Service Desk or on the web, the **Active Omnichannel Agent Dashboard** view doesn't show certain dashboards like **Tier 1 Dashboard**, **Tier 2 Dashboard**, **Knowledge Manager**, and **My Knowledge Dashboard**. To learn more, see Dashboards don't appear in Omnichannel for Customer Service active dashboards view.

How long does a configuration change to the Omnichannel for Customer Service and unified routing settings take to update?

All configuration changes to a feature or setting, such as updating a queue membership or workstream setting, can take up to 15 minutes to reflect.

How can I bring custom entities, forms, and dashboards into the Omnichannel for Customer Service app?

The Omnichannel for Customer Service app can be customized to include custom dashboards and custom forms the same as any Unified Interface app module. The sitemaps can be updated to include custom entities, and default forms can be changed to load custom ones for the entities. All Microsoft Dataverse entities and pages are compatible with the Omnichannel for Customer Service app.

Can I customize the Conversation Summary form?

Yes. For a list of supported customizations, see Customizations supported by the Conversation form.

Why am I not able to see the Intraday Monitoring report and datasets in Power BI service while configuring intraday insights dashboard for supervisors?

Creation of the IntradayMonitoring report may take up to 15 mins to appear in your configured Power BI workspace. While configuring the Power BI workspace in admin app, ensure that you have saved the configurations before you exit the configuration form. When you select **Save**, the creation of the report and dataset is initiated. If you missed saving the configuration, initiate the configuration for Supervisor Experience again. To learn more, see Configure Intraday insights for Omnichannel for Customer Service app on web.

What is the application ID field on the application user form?

The application ID is a mandatory field for creating application users in Dataverse. You can copy any application ID for any valid (non-expired) application created in Microsoft Entra ID for the same tenant into this field.

Supervisor experience

Can I monitor conversations for all channels?

Yes, you can monitor conversations for the voice channel and all messaging channels, including async channels.

Why am I not able to see the supervisor dashboards in my app?

Check the following:

- Make sure that the Omnichannel supervisor role is assigned to the user.
- For the Power BI intraday dashboard, ensure that the dashboard is shared with the user both on Power BI service and in the Omnichannel app.

For more information, see Configure Intraday Insights dashboard.

Why are my Chat Insights and Sentiment dashboard reports empty?

By default, the reports are installed with only a data connection. Once you start using chat and sentiment features, you'll see data come through.

How far can I go back in the historical report?

A maximum of 12 months or the most recent 100,000 records. The limitation of 100,000 records is a Power BI data limitation.

Can I customize reports?

Yes, you can customize the visualizations by editing the report in Power BI.

How frequently does the data refresh?

The dataset for the Live Monitoring report is real time; if a report is refreshed or filters are changed, the data will be updated as per the current state of the system.

The dataset refresh interval for Intraday and Chat Insights reports depends on your settings in Power BI. To learn more, see Configure Intraday Insights dashboard and Chat Insights set-up.

Why am I not able to see more than 100 agents while using filters in Omnichannel Ongoing Conversations dashboard?

By default, the application only displays 100 agents at any given time while filtering the conversation on the **Omnichannel Ongoing Conversations** dashboard. The list of 100 agents is displayed alphabetically. For example, you have 200 agents in your organization, and 100 agents have names that start with the letters A through D, the application only displays these agents. The rest of the agents with names that start with letters E through Z are not listed.

What controls are in place to limit the exposure of agent performance KPIs within my organization?

These controls are in place for exposing the data in reports:

- Access to the Power BI reports is controlled by Power BI access roles, and sharing within the Omnichannel app. To learn more, see Configure Intraday Insights dashboard
- Access to the Ongoing Conversation dashboard is controlled by the **Omnichannel supervisor** Dynamics role.

- Sentiment can be turned on or off in Customer Service admin center. To learn more, see Enable sentiment analysis

Chat widgets

Can I have the widget show on different pages or different websites?

The widget can show on any portal you want. You can copy the HTML script tag anywhere to make it appear on specific pages, a different Power Apps portals, or a custom portal as well.

If I have the widget on multiple pages or websites, what happens when I navigate across the pages with an ongoing chat?

The same widget will persist the chat as you cross different pages or websites.

Routing and work distribution

Can I route chats based on custom variables that we pass through code on my portal?

Yes, you can create custom context variables and create routing rules based on them. For more information, see the following articles:

- Understand and create workstreams
- Configure assignment methods for queues
- Manage custom context

Can routing in Omnichannel for Customer Service be used for other external channels (for example, my phone calls)?

Yes. In Omnichannel for Customer Service, routing can be used to route chat, SMS, and voice conversations.

SMS

What information from a TeleSign account do I need to enter while configuring the channel?

You'll need the customer ID, API key, and the phone number from your TeleSign account. More information: Sign up for TeleSign account

Why am I unable to validate the TeleSign account information using the Validate API key option in the admin app?

The Validate API Key functionality validates the customer ID and API key by trying to send a test message to one of the numbers provided in the **SMS phone numbers** tab. Ensure that the customer ID and API key are entered correctly, and the numbers provided in the **SMS phone numbers** tab can receive the text messages that are sent for validation. The phone number should have the country code with no plus sign (+), spaces or special characters. For example, this would be correct: 14251234567.

How can I know if I can get a phone number from TeleSign in a specific country?

See the TeleSign coverage map for Two-Way SMS. For any additional queries, we recommend that you send an email request to support@telesign.com.

Which phone number types are supported?

TeleSign supports long and short codes; the use of short codes with SMS messaging is supported as long as the customer is using an enterprise account.

Can I have my customers send international texts?

Support for this scenario by TeleSign can vary based on geography. We recommend that you send an email request to support@telesign.com for your specific scenario if text messages need to be sent or received across countries.

Can I communicate with customers using outbound SMS?

Yes. To send outbound SMS, you must first configure the SMS channel using Twilio, TeleSign, or Azure Communication Services. You can then create message templates, and use them to communicate with multiple customers.

More information: Configure an SMS channel for Twilio, Configure an SMS channel for TeleSign, Configure an SMS channel using Azure Communication Services, Create message templates

Does the SMS channel automatically identify the customer?

Yes, Omnichannel system will automatically identify the customer based on the incoming phone number. It will look for phone numbers in the **Mobile Phone** field of Contact records or the **Phone field** of Account records. Ensure that the phone number in these fields has the country code along with the plus sign (+) without any spaces or special characters. For example, this would be correct: +14251234567.

Can I send automated SMS responses?

Yes. In Omnichannel for Customer Service, you can send automated messages based on system-triggered or user-defined events. More information: Configure outbound messaging

Is there anything unique about the way SMS messages are routed to agents?

All channels integrated into Omnichannel for Customer Service have the same routing capabilities, including SMS. You can create routing rule items with conditions based on Account or Contact entities. Other entities (Case, Context variable, and SMS Engagement Context) aren't supported at this time and shouldn't be used for creating conditions in routing rule items in an SMS workstream.

Bot

Can a third-party bot be integrated with Omnichannel through this feature?

Only bots created through Microsoft Bot Framework can be integrated at this time.

FAQ about custom time calculation of SLA KPIs

Article • 04/04/2022

Overview

This topic contains the frequently asked questions (FAQ) that you, as an administrator, might have about the custom time calculation of service-level agreements (SLAs) key performance indicators (KPIs).

When does the custom action or plug-in get initiated?

The custom action or plug-in gets initiated during the creation of a new SLA KPI instance, which also includes a SLA KPI, that has been resumed from a pause status.

How is the pause and resume scenario different from a SLA KPI creation scenario?

The pause and resume scenario includes the following two steps:

1. The custom action is initiated with requestType as `getElapsedTime`. This calculates the time elapsed between the paused and resumed state of the SLA KPI.
2. The custom action is initiated with requestType as `getEndTime`. This calculates the new `WarningTime` by adding the above `elapsedTime` to the current `warningTime`. A similar calculation is also done for `FailureTime`.

How can I override the `StartTime` for a SLA KPI instance without creating and updating the custom DateTime field?

You can override the startTime of a SLA KPI instance based on the custom logic, whereby you have to change the `startTime` parameter.

```
  // when the case priority is modified and a new KPI instance is being
created, the KPI instance needs to start from UTC instead of CreatedOn
        if ((int)(((OptionSetValue)
(caseRecord.Attributes["priority"])).Value) == 1)
    {
            startTime = DateTime.UtcNow
    }

    // use OOB SLATimeCalculation Custom Action to do actual calculation_
    OrganizationRequest requestTimeCalculation = new
OrganizationRequest("msdyn_SLATimeCalculation");
    requestTimeCalculation["startTime"] = startTime;
        ... rest code is same as previous examples
```

How can I override the defined warning or failure duration of a SLA KPI instance?

You can override the warning or failure of a SLA KPI instance based on the custom logic, whereby you must change the following parameter. Note that the value provided must be in minutes.

```
// when the case priority is modified and a new KPI instance is being
created, the KPI instance must have failure time as 1 hour.
        if ((int)(((OptionSetValue)
(caseRecord.Attributes["priority"])).Value) == 1)
    {
            newFailureTime = 60; // in minutes
    }

    // use OOB SLATimeCalculation Custom Action to do actual calculation_
    OrganizationRequest requestTimeCalculation = new
OrganizationRequest("msdyn_SLATimeCalculation");
        requestTimeCalculation["minutes"] = newFailureTime;
        ... rest code is same as previous examples
```

```
```

FAQ about the voice channel in Omnichannel for Customer Service

Article • 08/25/2023

This article includes frequently asked questions (FAQ) about the voice channel.

Why is the agent unable to make an outbound call?

The agent must be a part of the outbound voice queue to make an outbound call. See Set up outbound calling for information.

Are overflow actions like voicemail and direct callback fulfilled for fallback queues?

No, overflow settings aren't applicable to fallback queues. The settings are ignored, and the routed work item is assigned to the queue. More information: How overflow works

Does the voice channel include real-time keyword recognition or sentiment tracking while an agent is on a call?

Yes, features such as sentiment analysis, agent suggestions for similar cases or knowledge articles, are available in the voice channel.

Is the voice channel PCI DSS compliant?

The voice channel is compliant with Payment Card Industry Data Security Standard (PCI DSS) today, but support for credit card data capture over voice isn't yet available. Agents have the ability to pause or resume call recording and transcription to avoid capturing sensitive information. Agents can also pause transcription to avoid dual-tone multi-frequency (DTMF) tones being captured in the transcript. All data is stored in Dynamics 365 and can be scrubbed by the customer.

Where does Azure Communication Services provide native PSTN services?

To register as a calling provider is a legally complex and country-specific process. Azure Communication Services has a multiyear road map to provide calling plans in different

countries and regions. To see all the countries where PSTN services are available, check the country availability page.

An alternative to Microsoft calling plans is Azure direct routing that allows you to bring your own phone numbers. More information: Azure direct routing

What about countries where Azure Communication Services doesn't provide native PSTN services?

Azure Communication Services is available worldwide, even if it isn't acting as the calling provider in certain countries. For these countries, Azure Communication Services provides a direct routing for local carriers, such as AT&T and Verizon, to connect to Azure Communication Services. With this mechanism, you'll still be able to deploy and use all the features of the voice channel in Dynamics 365.

What codecs are implemented in the voice channel?

The voice channel supports the G.711 and Opus codecs for PSTN and VoIP services.

Can I bring my own phone number?

Yes, you can bring your existing numbers to Omnichannel for Customer Service in the following ways:

- **Import numbers to Omnichannel for Customer Service**

    1. You must first port your existing phone numbers to Azure Communication Services. More information: Quickstart: Port a phone number into Azure Communication Services
    2. You can then import the phone numbers from Azure Communication Services to Omnichannel for Customer Service. More information: Sync from Azure Communication Services

- **Configure Azure direct routing**

    1. Configure a Session Border Controller (SBC) that's connected to your local carrier with Azure Communication Services.
    2. Register the phone number in Dynamics 365. More information: Bring your own carrier

Can my SBC and DNS server be deployed in different regions?

No. We recommend that the DNS server and SBC are deployed in the same region. More information: Bring your own carrier

How can I acquire extra phone numbers from Azure Communication Services?

You can purchase one phone number per tenant for Azure Communication Services through the Azure portal. To acquire phone numbers in bulk or request a specific phone number, follow the instructions to create a special number request order here .

Can I keep my existing contract with my carrier?

Yes, you can.

Can I configure a third-party voice provider in Omnichannel for Customer Service?

Yes, you can use the Dynamics 365 Channel Integration Framework 2.0 connector to integrate third-party contact centers, such as Genesys Engage, Solgari, and NICE inContact.

Does the voice channel tie in with Azure Communication Services or is it an entirely different technology?

The voice capabilities for Dynamics 365 Customer Service are built on Azure Communication Services.

Do I have to buy phone numbers from Azure Communication Services?

No, you don't have to. You can bring phone numbers from another carrier to use in the voice channel using Azure direct routing. More information: Bring your own carrier

If you've already brought numbers from another carrier into Microsoft Teams via Azure direct routing, then you can reuse your SBC and existing telephony infrastructure to bring those numbers into Azure Communication Services for use in the voice channel.

> **Note**
>
> Currently, you can't bring native Teams phone numbers to use in the voice channel.

Is it possible to enable voice integrations outside of the Omnichannel for Customer Service app, such as, by adding omnichannel capabilities to a customer's Dynamics 365 app?

No, the voice channel isn't supported in the other apps of Dynamics 365. It's supported in the Customer Service workspace and Omnichannel for Customer Service apps only.

How can I set up an IVR bot in the voice channel?

See the following articles to set up the interactive voice response (IVR) bot in the voice channel:

- Configure Power Virtual Agents bots for voice
- Integrate third-party IVR systems with voice channel

Should the language of the bot be the same as the primary language configured in the Customer Service admin center or Omnichannel admin center app?

Yes, the primary language of the bot must be the same as that of the voice workstream to which the bot is attached, but you can configure different geographic locales for the bot and the voice workstream to which it's attached. Let's consider an example where English is set as the primary language for the bot and its voice workstream. You can set different locales, such as **English-UK** in the voice workstream and **English-US** in the bot; the bot will speak in English-UK as the workstream locale setting takes precedence.

You can transfer conversations from one bot to another with different primary languages. For example, you can transfer conversations from an English bot to a Spanish bot. But, if you configure different locales:

- The bot's accuracy will depend on the similarities between the two locales.
- The preconfigured entities for the bot such as postal code might not be accurate.
- A bot-to-bot transfer of the conversation with the same language but two different locales isn't possible. For example, the transfer of a conversation from an **English-**

UK bot to an **English-US** bot can't happen. As a workaround, you can make the **English-UK** bot transfer the conversation to another phone number attached to a workstream to which the **English-US** bot is attached.

Can I recover data and phone numbers from a voice trial organization after it has expired?

No, you can't recover your data and phone numbers after the voice trial organization has expired and been deprovisioned.

Is disaster recovery supported for the voice channel?

- Business Continuity and Disaster Recovery (BCDR) for production instances of the voice channel are supported on a geographical basis. In certain regions BCDR will be a fast follow. For details on the geographies that are currently supported and the geographies where BCDR is a fast follow, see Local cloud deployments.
- In supported regions, BCDR policies are based upon business continuity and disaster recovery for Dynamics 365 and SLA for Azure Communication Services. For more information, see Business continuity and disaster recovery and SLA for Azure Communication Services.

Do you provide voice quality SLA for voice in Omnichannel for Customer Service?

No, we don't publish a voice quality SLA as many factors related to voice quality like network connectivity, speed, and bandwidth, can't be controlled. The SLA published for Azure Communication Services applies to the voice channel as well.

What tools are available to isolate performance and quality of voice channel?

The tools for isolating voice performance and quality are available through Azure Communication Services and can be found at Azure Communication Services media quality metrics. It might take up to two hours for the data to appear in the logs.

More information:

- Enable Azure Communication Services logs
- Azure Communication Services voice and video logs
- Integrate with user-facing diagnostics

- Use media quality statistics
- Use pre-call diagnostics
- Enable logging in Diagnostic settings
- Use Azure Communication Services communication monitoring plug-in

Does the voice channel support emergency calling?

Yes, the voice channel supports emergency calling; agents can call the emergency number during a crisis. This feature is currently supported in the United States and Puerto Rico where the emergency calling number is 911. More information: How emergency calling works in the voice channel

What are the applicable pricing scenarios for using the voice channel?

To understand the pricing calculation of various call scenarios, see Pricing scenarios for voice calling.

Why do my customers sometimes hear "Sorry! We couldn't serve you" when they call the contact center number?

Sometimes, when a Power Virtual Agents bot isn't added or an agent is unable to answer the call, your customers will hear the message that they couldn't be served. We recommend agents to refresh their presence regularly to ensure their availability to customers. If the problem persists, reconnect your Power Virtual Agents bot.

Frequently Asked Questions about Activities and the Timeline Wall

Article • 02/15/2022

Why can't I assign or delete an activity from the timeline?

If you use the **HideCustomActions** rule to hide buttons, such as **Assign** and **Delete** in the ribbon command bar definition, then those buttons that are present in the Timeline control will not work. The buttons in the command bar are the same as the buttons in the Timeline control; therefore, when a user selects the **Assign** or **Delete** button in the Timeline control, the following error message is displayed:

You do not have permission to perform this action. Please contact your system administrator.

To mitigate the issue, show the buttons in the command bar definitions.

Why do my users see different activities and records in My activities stream or other dashboard timelines?

The **My activities** stream in the dashboard shows the records and activities that are owned by a particular user. For example, user "A" sees records and activities that are owned by "A", and user "B" sees records and activities that are owned by "B".

Can I add activities to read only rows?

Yes. You can add activities to tables that are read only such as, notes, phone calls, tasks, and more.

Why I can't see other users activities and rows in the My activities stream in the dashboard?

My activities stream in the dashboard shows the rows and activities that are owned by you (user). For example, user **A** see rows and activities that are owned by **A**, and user **B**

see rows and activities that are owned by **B**.

FAQs about adding users to agent experience profile

Article • 04/05/2023

This article contains the frequently asked questions (FAQ) that you as an administrator might have when adding users to the custom agent experience profiles using the **Set as default** and **Set rank and roles** options in Customer Service admin center.

Can I set the profiles that are available out-of-the box as default profiles?

No. The **Set as default** and **Set rank and roles** options aren't applicable to profiles that are available out-of-the-box.

Can I create agent experience profiles, customize them and move between environments using solutions?

Yes. You can create and customize profiles in an environment, add them to a solution and then import them to other environments.

Why I can't I edit some of the custom agent experience profiles?

You can't edit profiles that are imported from a managed solution. You can edit only the agent experience profiles that are from an unmanaged solution. Profiles with the lock icon indicate that they're exported from managed solutions and aren't editable.

Can I assign the profiles available out-of-the-box to roles or set them as default?

No. The **Set as default** and **Set rank and roles** options aren't applicable to profiles that are available out-of-the-box.

Why do I see multiple profiles with the same rank?

You can't create multiple profiles with the same rank from the Customer Service admin center. However, if you've imported profiles created in different environments, you can have two or more profiles with the same rank. We recommend that you resolve the conflict from the source environments and then import the profiles.

Can I have multiple profiles marked as default?

No. You can't have multiple default custom profiles when you're setting the default profile in Customer Service admin center. However, if you've imported profiles created in different environments, you might see multiple default profiles. We recommend that you resolve the issue in the source environments and then import the profiles.

FAQ about setting up Teams chat

Article • 08/04/2023

View answers to questions about setting up Teams chat in customer engagement apps.

How do I turn off Teams collaboration?

1. In Dynamics 365, go to one of the apps, and then perform the following steps.

   Customer Service admin center

   a. In the site map, in **Agent experience**, select **Collaboration**.

   b. In **Embedded chat using Teams**, select **Manage**.

2. Set the toggle to **No** for **Turn on Microsoft Teams chats inside Dynamics 365**.

3. Save your changes.

How do I turn on Teams collaboration for specific apps?

1. In Dynamics 365, go to one of the apps, and then perform the following steps.

   Customer Service admin center

   a. In the site map, in **Agent experience**, select **Collaboration**.

   b. In **Embedded chat using Teams**, select **Manage**.

2. On the **Microsoft Teams collaboration and chat** page, turn on the toggle for **Turn on Microsoft Teams chats inside Dynamics 365**.

3. Select **Turn on for selected Dynamics 365 apps**, and then select the desired apps.

   ⓘ Note

If you're using Teams chat for the first time or previously enabled the setting, Customer Service workspace and Customer Service Hub are preselected and appear in the list of selected apps.

4. Save your changes.

Omnichannel for Customer Service on Unified Service Desk

Article • 05/19/2022 • 2 minutes to read

Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels. An additional license is required to access Omnichannel for Customer Service. For more information, see the Dynamics 365 Customer Service pricing overview and Dynamics 365 Customer Service pricing plan pages.

> **Note**
>
> The topic applies when you want to use Omnichannel for Customer Service with Unified Service Desk client application.

Overview

Unified Service Desk for Dynamics 365 Customer Service apps is a client application. You need to install the Unified Service Desk client application on every agent desktop to use Omnichannel for Customer Service.

Omnichannel for Customer Service is packaged as solution that you need to deploy on a Dynamics 365 Customer Service organization. Use the Microsoft Dynamics 365 Package Deployer to deploy the Omnichannel for Customer Service solution on a Dynamics 365 Customer Service organization.

Download Unified Service Desk client application

Download the Unified Service Desk client application.

> **Note**
>
> Only Unified Service Desk 4.1 or a higher version of client application is supported to use with Omnichannel for Customer Service.

Install Unified Service Desk client application

To learn how to install Unified Service Desk, see Install Unified Service Desk.

Make sure your computer meets all requirements before you install the Unified Service Desk client application. More information: Unified Service Desk system requirements

Unified Service Desk Guide

Article • 04/19/2023

Get started

- Unified Service Desk overview
- Unified Service Desk concepts
- Unified Service Desk system requirements
- Install, deploy, and upgrade
- Download Unified Service Desk

Configure

- Learn to use Unified Service Desk
- Configure your agent application
- Configuration walkthroughs
- Hosted control types, action, and event reference

Administer

- Manage access control
- Manage global options
- Configure client caching
- Configure auditing and diagnostics

Extend

- Integrate with external and web applications
- Use custom hosted control in Unified Service Desk
- Create custom listeners for auditing, diagnostics and traces
- Integrate with Citrix applications

Use (customer service agents)

- Connect to the server using the client application
- Use the Interactive service hub sample application package
- Use the Web Client sample application package
- Accessibility features

Troubleshoot and debug

- Configure client diagnostic logging
- Use the Debugger control
- Debug your custom code

Migrate

- Migrate to Customer Service workspace

Dynamics 365 Channel Integration Framework guide

Article • 03/17/2023

General

- Choose between Channel Integration Framework version 1.0 and 2.0
- Frequently asked questions

Version 1.0 documentation

Get started

- Dynamics 365 Channel Integration Framework overview
- Architecture overview
- System requirements

Download

- Get Dynamics 365 Channel Integration Framework
- Download sample code for softphone integration (version 1.0)

How to

- Configure a channel provider for your organization
- Build a simple communication widget
- Search and open records on an incoming conversation
- Enable outbound communication (ClickTOAct)
- Add a Dynamics 365 Channel Integration Framework solution as a dependent solution
- Authenticate channel users to the channel (widget)
- Pass Dynamics 365 URL to widget library

JavaScript API Reference

- Microsoft.CIFramework
- Client-side events
- Entity reference

Version 2.0 documentation

Get started

- Dynamics 365 Channel Integration Framework overview
- Architecture overview
- System requirements

Download

- Get Dynamics 365 Channel Integration Framework
- Download sample code for softphone integration (version 2.0)

How to

- Configure channel provider using app profile manager
- Enable outbound communication (ClickTOAct)
- Add a Dynamics 365 Channel Integration Framework solution as a dependent solution
- Authenticate channel users to the channel (widget)
- Pass Dynamics 365 URL to widget library
- Manage session templates
- Manage application tab templates
- Manage notification templates
- Associate templates with scenarios
- Channel Analytics
- Support for multiple providers

JavaScript API Reference

- Microsoft.CIFramework
- Client-side events
- Entity reference

Customer Service Insights

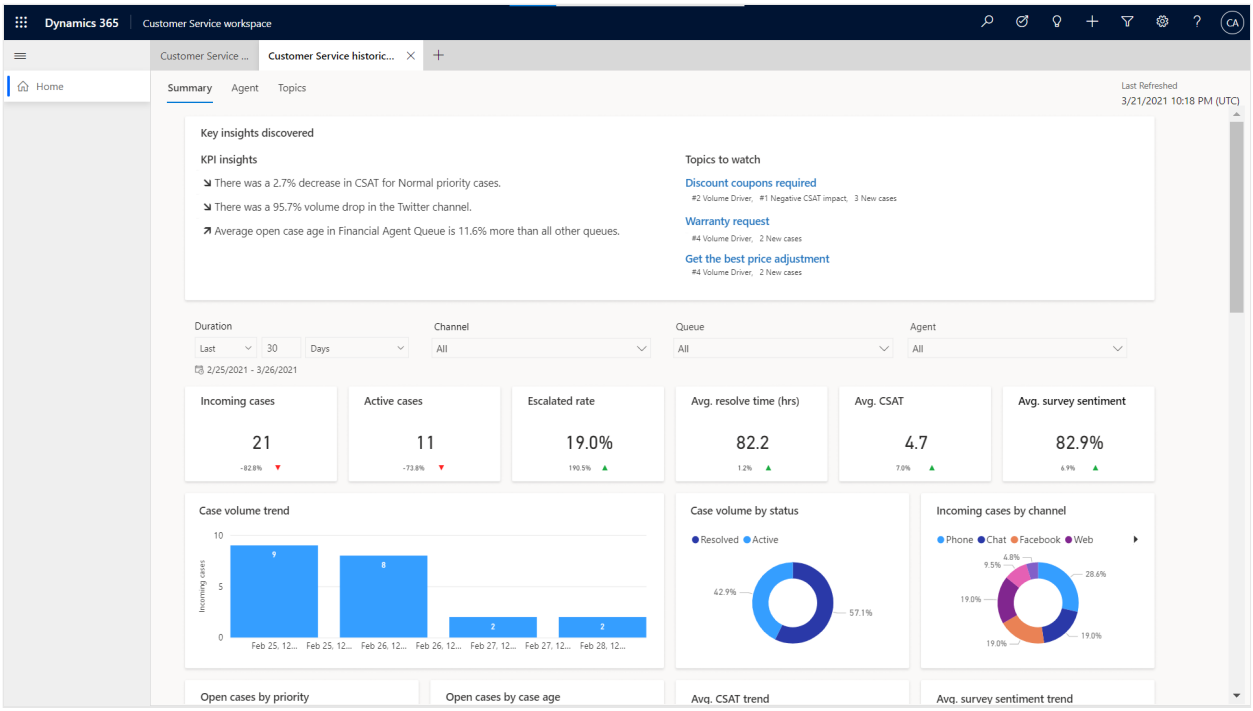
Article • 11/01/2023

> **Note**
>
> Microsoft Power BI template reports for **Customer Service Analytics dashboards** and **Omnichannel Insights** will be deprecated as of November 6, 2023. We recommend that you start using the out-of-box **Omnichannel historical analytics** and **Customer Service historical analytics**, which don't need additional Microsoft Power BI licenses. You can **visually customize** and extend these reports to add additional data sources and metrics through **data model customization**. For details on the deprecation, go to **Deprecations in Customer Service**.

Dynamics 365 Customer Service Insights helps both agents and customer service managers make better decisions and improve customer satisfaction. Agents and customer service managers can use AI and analytics capabilities for Customer Service Insights and Omnichannel for Customer Service. You can empower your teams with insights into customer satisfaction–boosting analytics and AI-powered features to spend less time searching and more time engaging with customers.

The premium AI capabilities in Customer Service Insights use advanced AI technology in natural language understanding and natural language generation to help your service team focus on what matters and guide them to success. As an agent, you can use real-time similar cases and knowledge article suggestions that are customized for the current context. The AI-driven technology allows agents to help solve customer issues more quickly, improving resolution rates, and customer satisfaction.

These capabilities are deeply embedded into the core agent and manager experiences in Customer Service and Omnichannel.



Customer Service Insights across your organization

Customer Service Insights connects with your Dynamics 365 Customer Service and Omnichannel for Customer Service data to provide your support organization with out-of-box AI and BI capabilities, such as customer service analytics, similar case suggestions and more. Different applications will surface slightly different feature sets, as detailed below.

Customer Service applications

Customer Service Insights is now embedded in Dynamics 365 Customer Service. After it is enabled, this experience allows you to start seeing historical analytics directly within the Customer Service environment. Several reports and dashboards can be viewed by your management team.

For more information on the Customer Service offerings, see the following capabilities.

- Customer Service Historical analytics
- Topic clustering for cases
- Customer Service analytics in Power BI
- Knowledge search analytics
- AI Suggestions for similar cases and knowledge articles

Omnichannel for Customer Service

Customer Service Insights for Omnichannel for Customer Service brings many of the same key operational metrics and features right into your daily contact center operations. Real-time customer sentiment analysis, combined with contextual AI suggestions of relevant cases and knowledge articles, helps agents reduce customer frustration and case resolution times. With the sentiment analysis dashboard, you can use the real-time sentiment data to gain a better understanding of how customer interactions drive KPIs and satisfaction scores.

For more information on the Omnichannel for Customer Service offerings, see the following topics.

- Analyze real-time customer sentiment
- Enable AI suggestions for similar cases and knowledge articles
- Dashboards overview

Important

If you're a customer who uses the Customer Service Insights standalone web application, your current working environments will be terminated and inaccessible by December 8, 2021. You can no longer use the standalone service after this date. The embedded Customer Service Insights features in the core applications will continue to be available and supported. For users who hold Customer Service Enterprise licenses, you can no longer create new workspaces, but you'll retain access to existing ones. Meanwhile, the standalone app guide contains documentation for the web application.
