Introduction to SmartOps

Accelerate your digital transformation with Accion Labs' DevOps-driven approach, seamlessly integrating AI, Data, and Application Platforms. Our proven frameworks deliver solutions with speed and precision, reducing time-to-market and maximizing ROI. With DevOps at the core, we ensure continuous innovation, optimized performance, and measurable business impact. Partner with us to unlock the full potential of intelligent automation and drive sustained, scalable growth.

How We Enable

Assess Current State via SmartOps Lens
Select a Strategic Pilot Use Case
Evaluate Organizational Readiness
Comprehensive Assessment
Develop an Accelerated

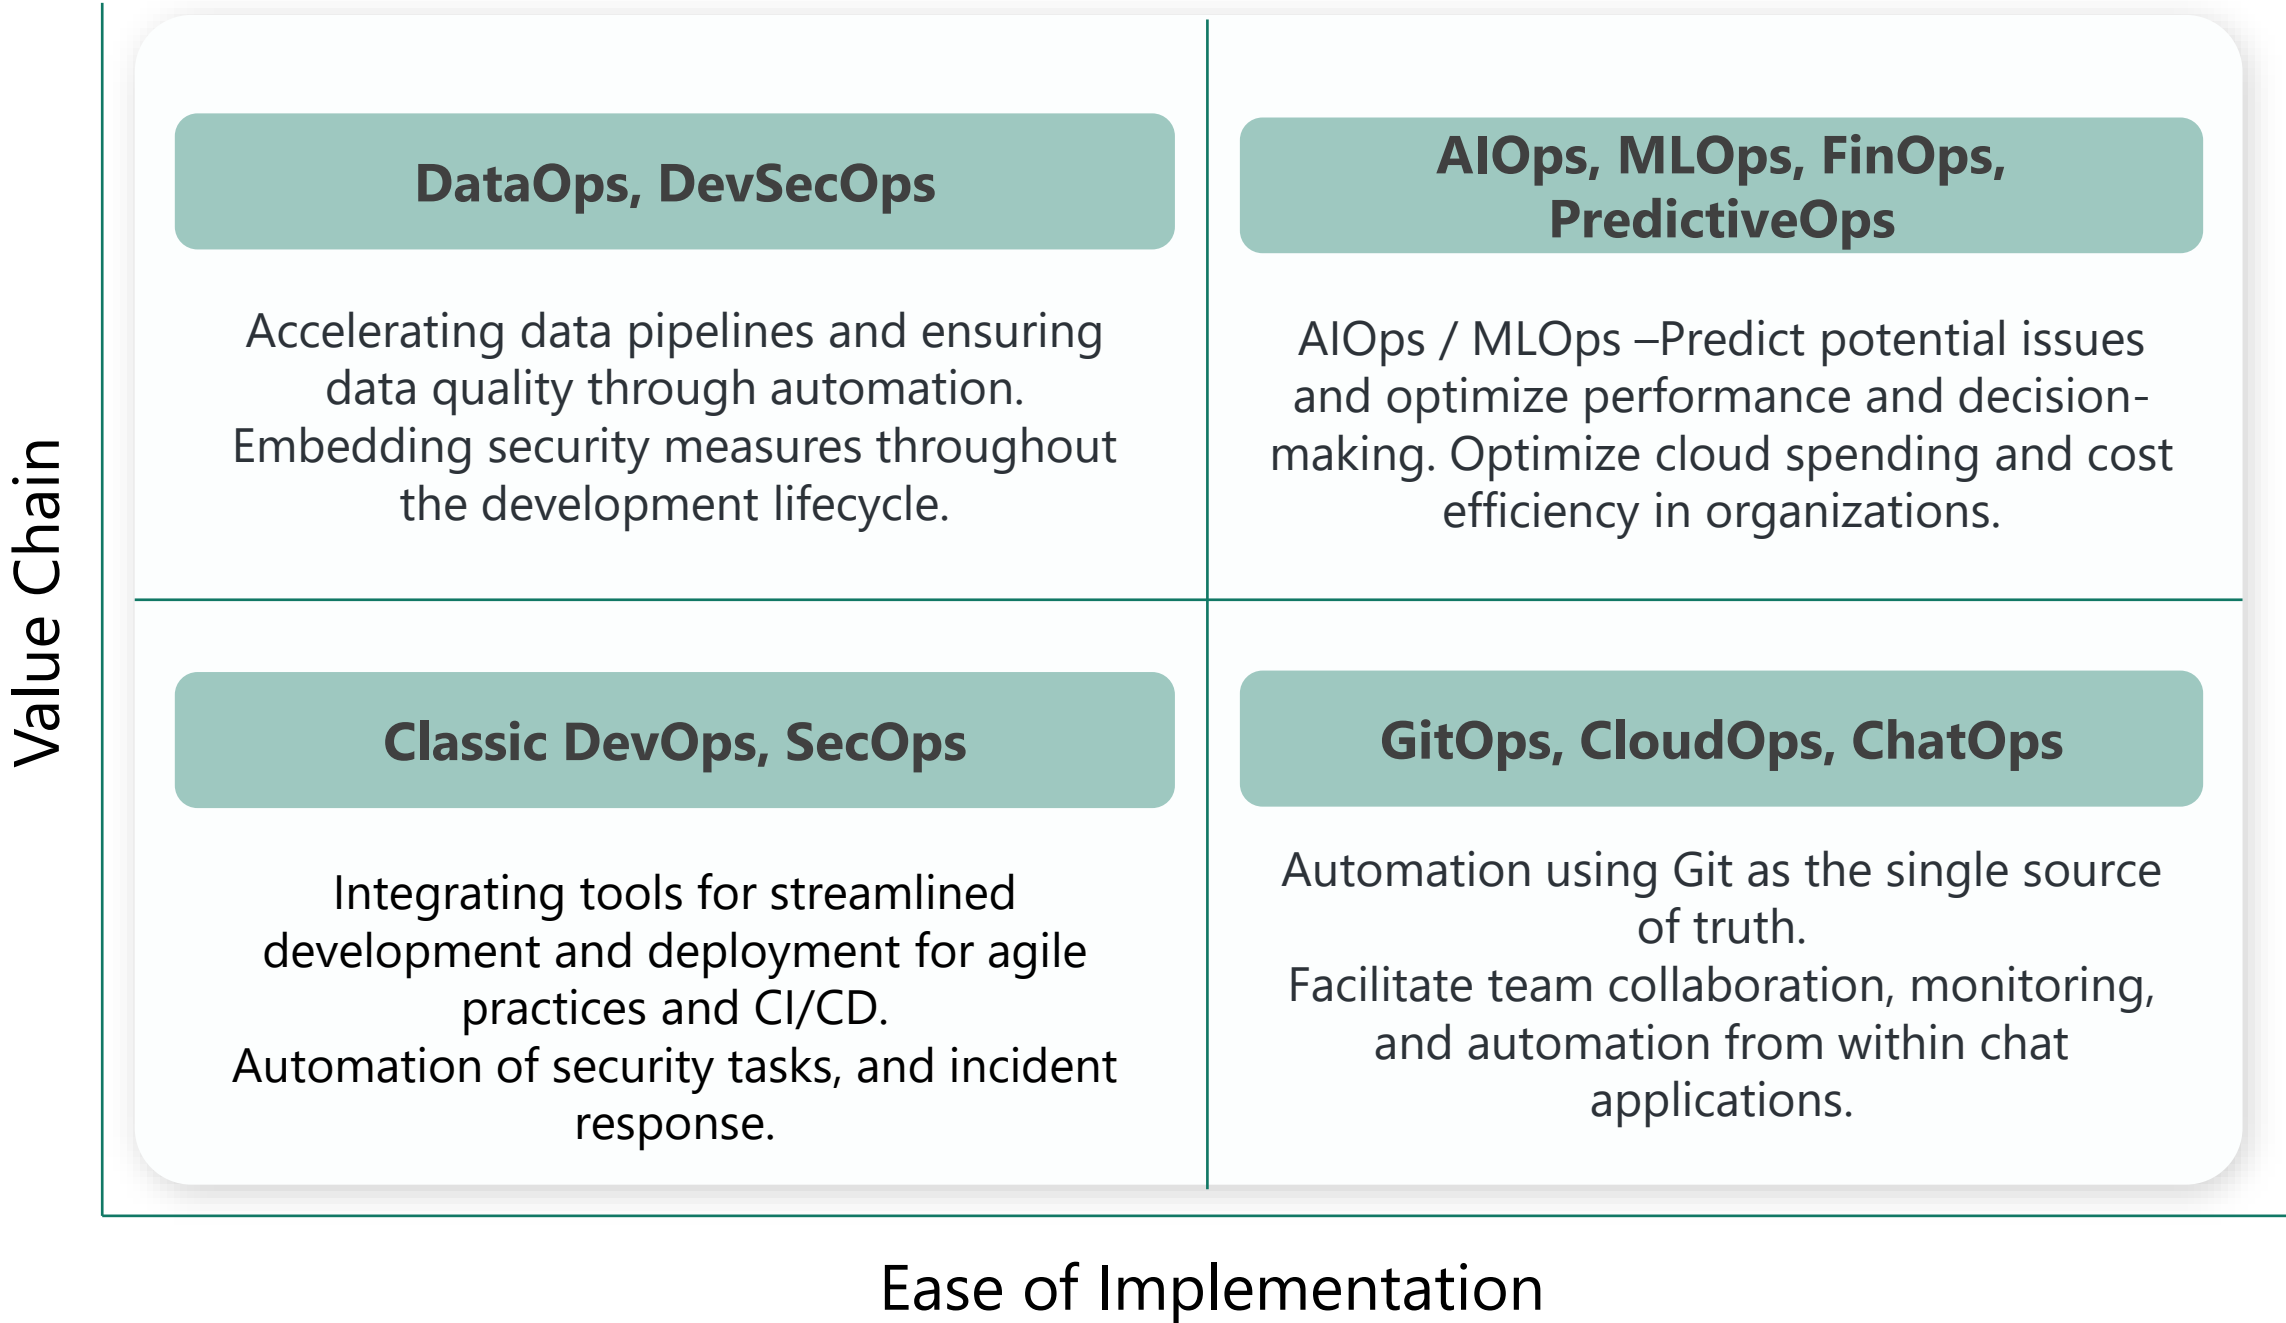

Workshop Benefits

Understand the current state of the critical Focus Area
Define the strategy and architecture
Identify the pilot use case
Actionable Next Steps for Discovery & Roadmap

In an era where agility and innovation define success, organizations must innovate rapidly while maintaining quality and security. AccionLabs DevOps Assessment and Migration offering empowers organizations to transform software development lifecycle. By embracing a holistic approach, we enable businesses to modernize their IT infrastructure, enhance collaboration, and accelerate the delivery of mission-critical applications.

Why Choose Our DevOps Assessment and Migration?

Navigating the complexities of modern IT requires more than just tools; it demands a strategic mindset. Our comprehensive assessment is designed to identify gaps, streamline processes, and implement best practices that drive efficiency and innovation.

Holistic Strategy

Over four weeks, we conduct a thorough assessment of your current DevOps practices, identifying opportunities for improvement across various dimensions.

Focus on Collaboration

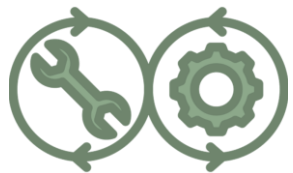

We break down silos between teams, fostering a culture of collaboration that enhances productivity and accelerates feature delivery.

Tailored Solutions

Every organization is unique. We customize our approach to fit your specific needs, ensuring that our solutions align with your business objectives.

We bring a wealth of skills to the table, ensuring that your transition to a modern DevOps environment is smooth and effective.

DevOps Tools

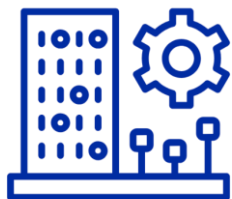

Proficient in Azure DevOps, Jira, GitHub Actions, Flux CD, Argo CD, and more.

Scripting Proficiency

Our team is skilled in PowerShell, Python, and Shell scripting to create custom solutions tailored to your needs.

Infrastructure as Code (IaC)

Expertise in ARM templates, Helm charts, and Terraform scripts enables us to automate infrastructure deployment efficiently.

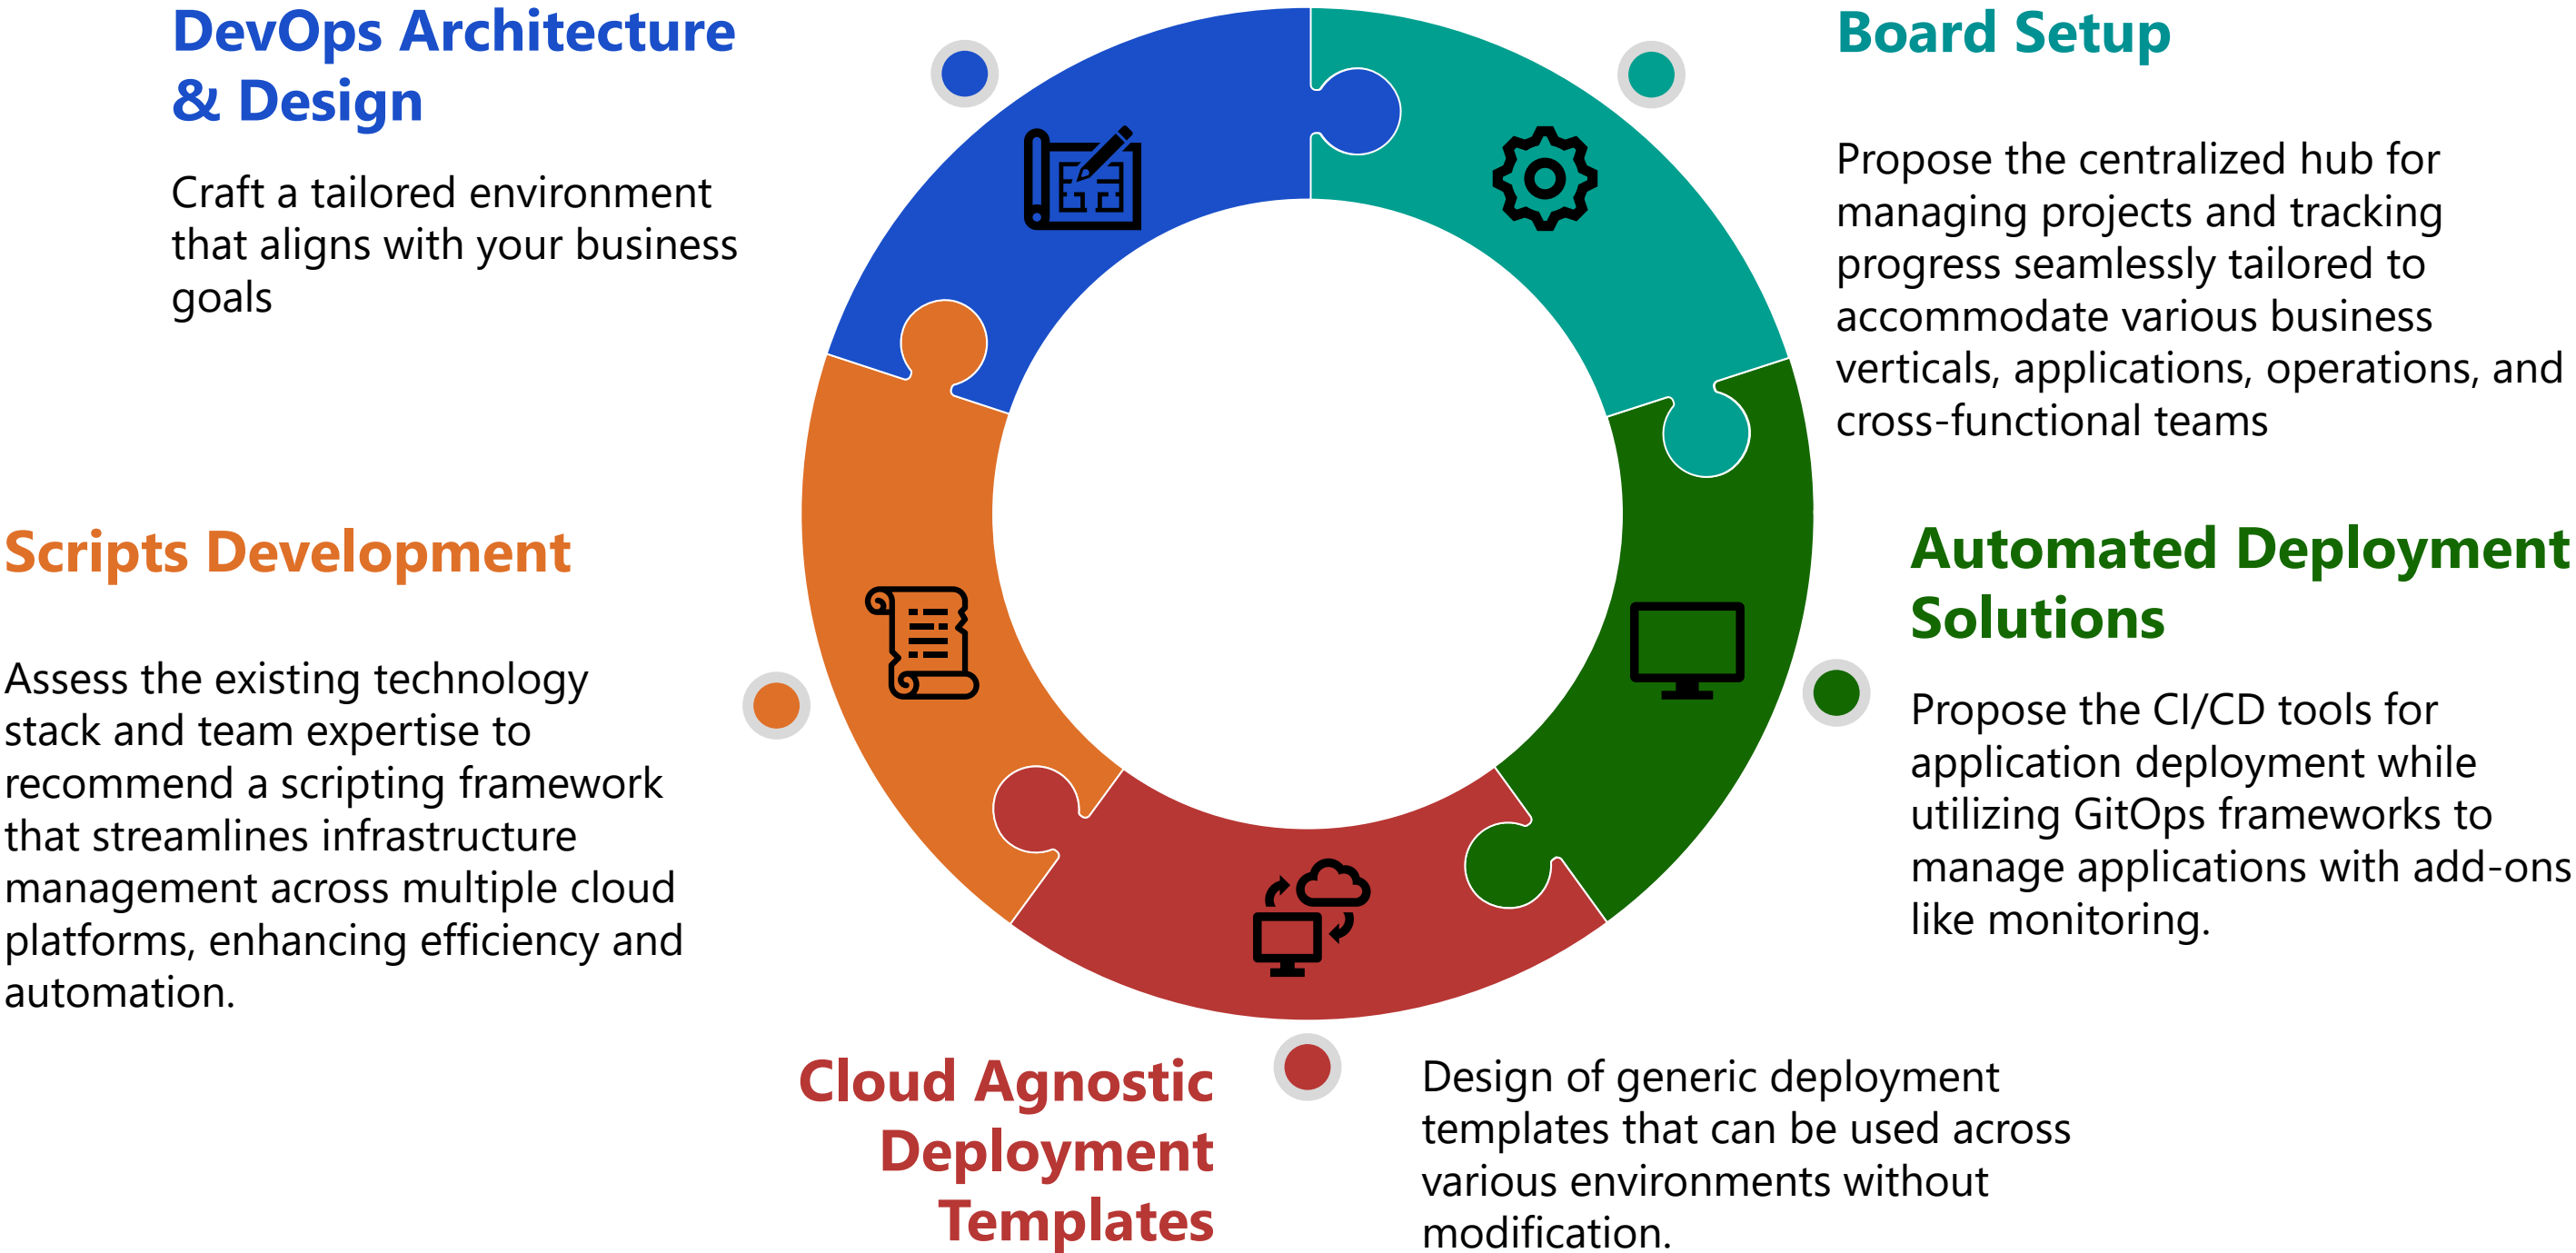

Monitoring Solutions

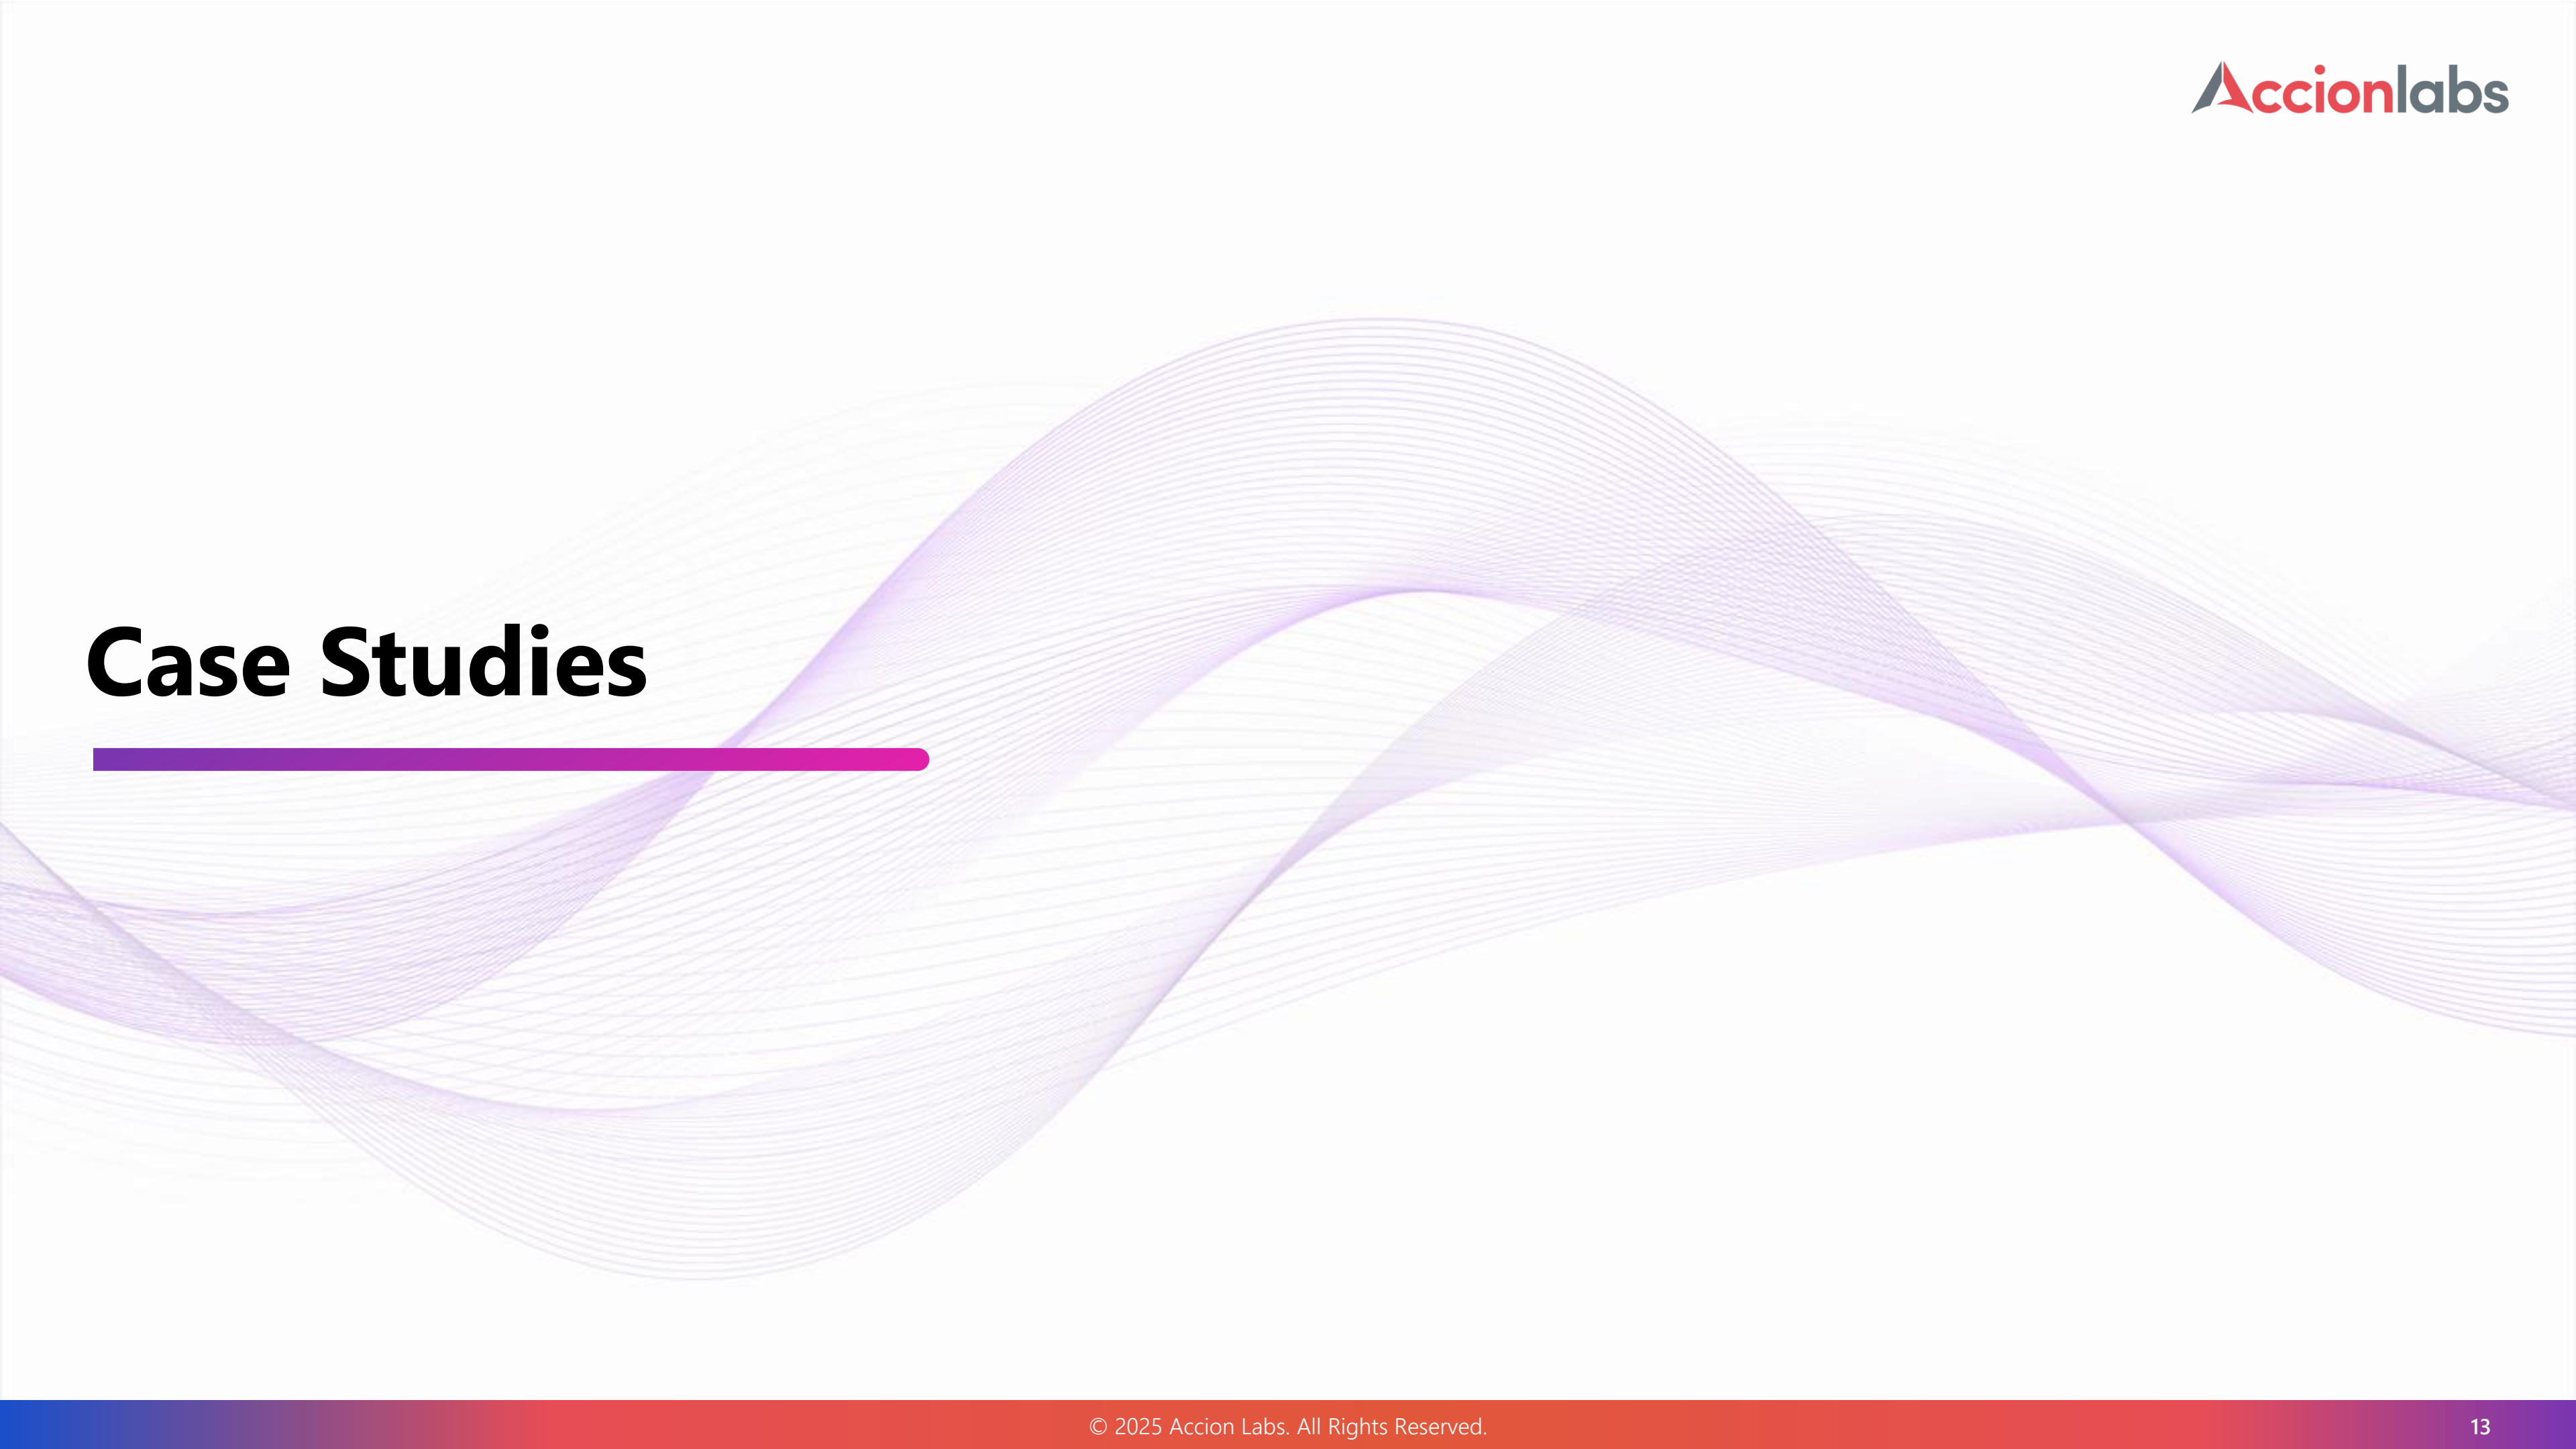

Implement monitoring tools like Prometheus and Grafana to gain real-time insights into your applications' performance.

Deliverables Tailored for Success

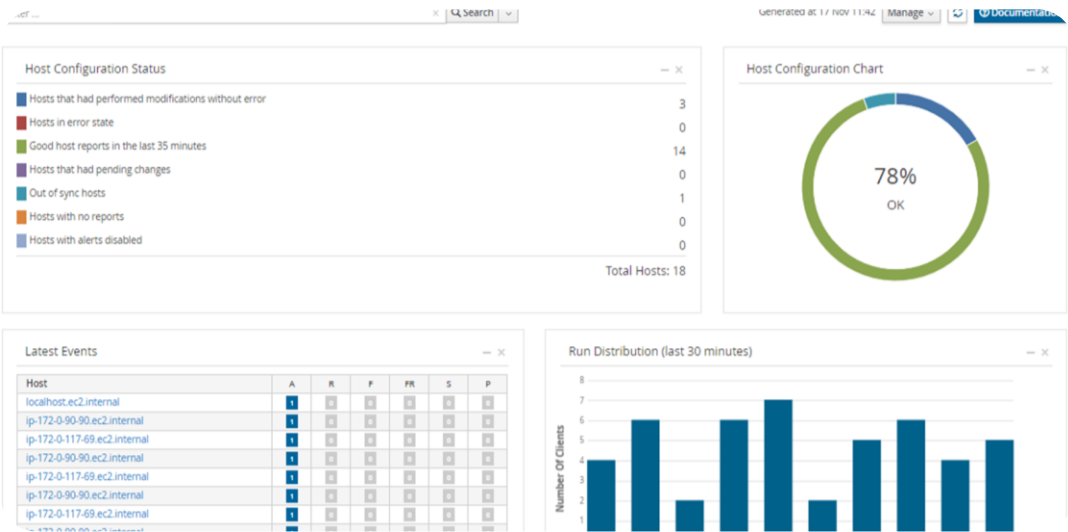

Our comprehensive assessment will result in deliverables designed to elevate your organization:

Case Studies

The background of the slide is decorated with several overlapping, wavy lines in shades of purple and blue, creating a sense of motion and depth. A solid purple horizontal line is positioned below the 'Case Studies' title.

Deployment Automation for a Global Healthcare & Research Organization

Key Challenges

- Client was facing difficulty in managing the security policies and the application configurations on the servers as per the standards
- The infrastructure was expected to be highly available and scalable to cater the unexpected incoming high spikes at any point in time.
- Application deployment was expected to be automated

Business Impact

Optimized

Cost by using open-source tools

About the Client

Healthcare

Worldwide

Chicago, USA

An Enterprise-scale Online eCommerce Healthcare Solutions

Our Solution

- Accion Labs architected and built a highly available, scalable and secure environment.
- PCI centric network, application and infrastructure scans were conducted to close the identified vulnerabilities
- Optimal use of opensource tools for deployment and configuration management
- Used Intrusion Detection and Prevention Systems to block threats

Conclusion

- The architecture built was load tested which sustained a concurrent access of 4000 users
- Successful DR mocks were conducted to check the availability of the application in regional failures
- PCI scans were conducted and gaps identified were closed. The environment passed the PCI audit and PCI compliant certificate was obtained

Enhanced CI/CD , SRE Capabilities for leading Investment Portfolio Management Platform

Overview

A top financial investment technology firm wanted to build a Modern Azure-based platform for secure, scalable investment portfolio management, with Unity-driven reports to create a critical platform serving financial services industry

Key Challenges

- **Lack of automated CI/CD**
- **Manual deployments** caused delays and errors.
- No Infrastructure as Code (IaC); environments not reproducible.
- Insecure storage of secrets in configuration files.
- Absence of real-time observability—no telemetry, logs, or alerts.
- Pipelines **lacked security integration** (static code and container scanning).
- Poor scaling and frequent performance degradation during peak loads.

Business Impact

About the Client

Finance

Worldwide

USA

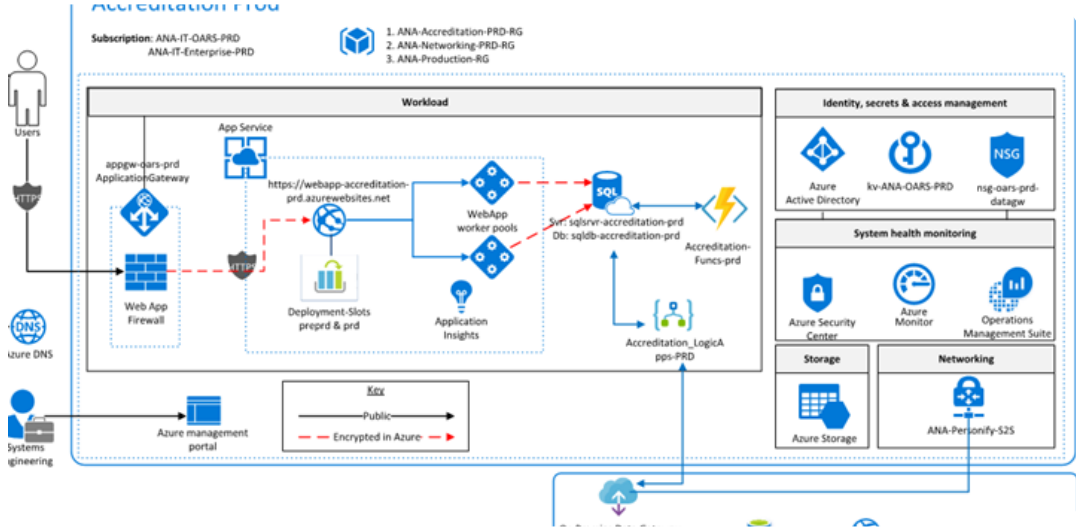

Investment & Portfolio Management

Our Solution

- Modern stack with React + Remix for UI, .NET APIs, Azure SQL for persistence.
- CI with Azure DevOps; GitOps-based CD with Argo CD and Helm charts.
- AKS for container orchestration with autoscaling enabled.
- Terraform used for full Infrastructure as Code across Azure resources.
- Secrets securely stored in Azure Key Vault and injected into pipelines
- Observability stack: App Insights, Log Analytics, Grafana Dashboards.
- End-to-end security with container vulnerability scanning and pipeline policies.

Conclusion

- Reproducible environments and rollback support via GitOps
- Centralized, secure secret management with zero config leaks
- Reduced security risks with pipeline scanning and hardened images

Key Challenges

- Create a secure and highly scalable hosting option outside of their datacenter with DevOps Automation
- Improve HA and DR posture using As-a-Service capability
- Create an API-driven Digital Integration Hub enabling new capabilities
- Reduce Total Cost of Ownership for IT infrastructure

About the Client

Health Care Services & Hospitals

Texas, USA

33000+ employees

Healthcare and emergency transportation

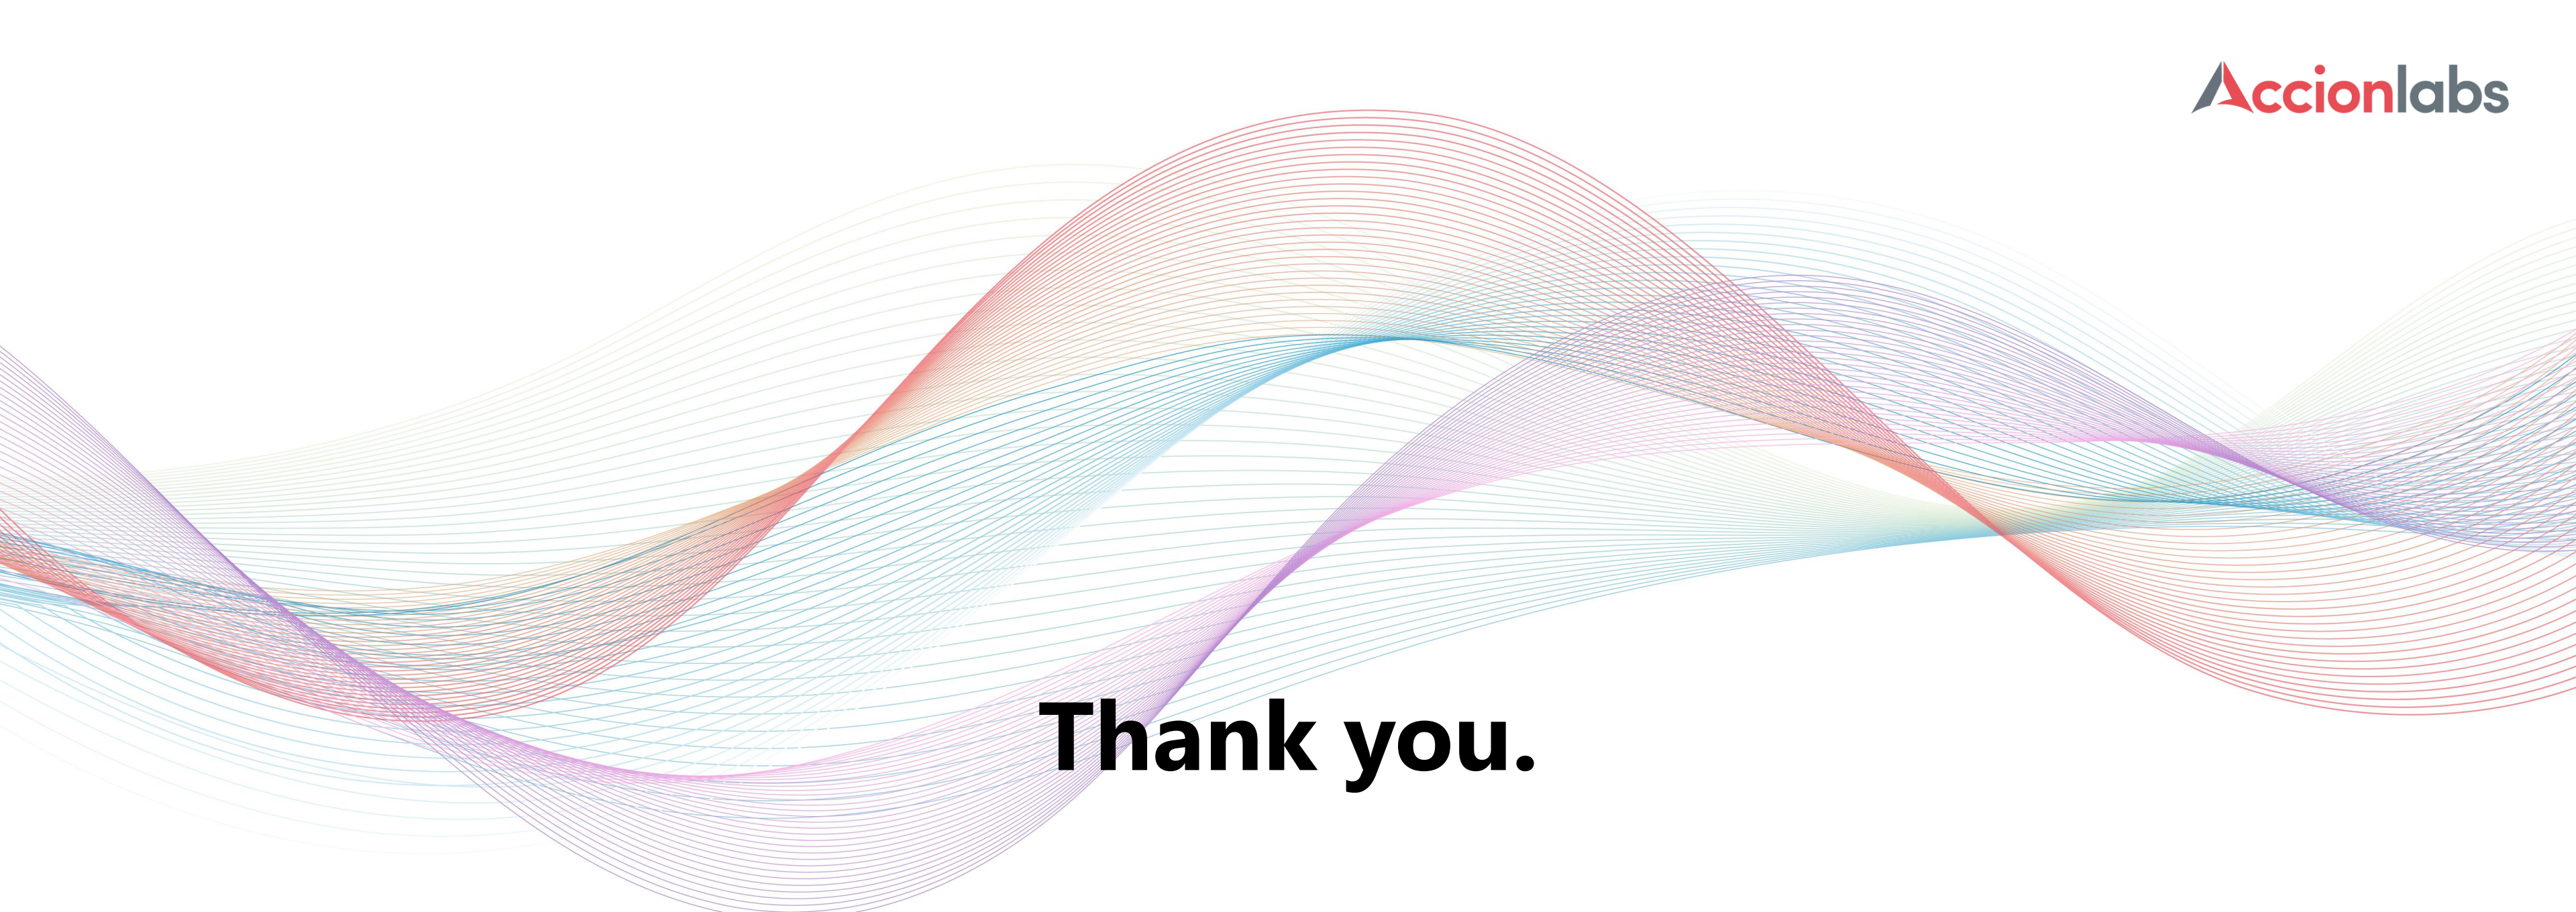

Our Solution

Executed a multiple engagements to help create a cloud migration roadmap in Azure as well as executing on near term modernization projects

- Enterprise cloud governance to ensure control and security
- Create a Digital Integration hub for Employee API to centralize all integrations with the new Workday system
- Design, Azure TCO and migration plan for Order App to Azure PaaS services
- End-to-end DevOps implementation including CI/CD

Conclusion

- Centralized API-driven modern integration hub resulting in lower maintenance and high-scalability
- Reduce implementation cost and support to expedite Workday implementation
- Faster time to market for new product releases
- Increased security posture by leveraging Azure services for network security, encryption, and access control

A large, abstract graphic composed of many thin, overlapping, wavy lines in various colors (red, orange, yellow, green, blue, purple) that create a sense of movement and depth across the upper half of the slide.
