Copilot Countdown: Navigation
AI Opportunity Workshop

Understand how to leverage Copilot for Microsoft 365 and artificial intelligence to transform your business.

The service aims to help organizations create a personalized plan for using AI solutions to suit their goals. The plan includes recommendations for the deployment and use-cases of Copilot for Microsoft 365, as well as an estimated timeline for safe deployment.

Key benefits:

- Reimagine your business processes with artificial intelligence and unlock new possibilities.

- Understand how to improve employee experience and productivity with AI and automation solutions.

- Gain insight into the latest technology and best practices in artificial intelligence solutions and how they might lead to a competitive advantage.

Overview of the current state of AI
- What is a Large Language Model and what it means for the users of solutions such as Copilot for Microsoft 365.

What can artifical intelligence do for you?
- Overview of Copilot for Microsoft 365 and Azure OpenAI and their capabilities, common use-cases and benefits

Your organization's challenges and opportunities
- Understanding how Copilot for Microsoft 365 can help improve employee experience, operational efficiency, and innovation. How to measure the impact of AI or automation solutions on business outcomes.

Identifying impactful use cases within your organization
- Understanding how to distinguish between challenges suited for AI and challenges suited for other practical solutions.

Copilot Countdown: Security Checks
Security Workshop

Understand the risks involved in adopting artificial intelligence into your organizational environment – and how to mitigate them

The service aims to help organizations prepare for the deployment of Copilot for Microsoft 365 and Azure OpenAI solutions. Recommendations for immediate security and policy actions to ensure Copilot readiness, and a risk analysis that identifies risk factors and their severity for the organization.

Key benefits:

- Understanding how to ensure that your environment, data governance, security, and policies are ready for Copilot and comply with the Copilot standards and recommendations.

- Avoid potential risks and issues that may arise from improper use of Copilot or similar AI solutions.

Overview of technical requirements
- What are the technical requirements of Copilot, why, and how does that impact your organization's information security?

The risks and challenges of utilizing AI solutions
- Common risks associated with improperly configured environments and with insufficient employee training for the safe use of AI solutions.

Fundamentals of risk analysis
- How to identify and mitigate potential risks associated with Copilot, such as data loss, oversharing, privacy breaches, compliance violations, and security incidents?

Analyzing and assessing your environment
- Recognizing the risks in your organization's Microsoft 365 environment.

Copilot Countdown: Takeoff
Deployment and Pilot Run

Configure your environment and collect valuable first-hand data on Copilot for Microsoft 365

The service aims to help organizations prepare for the integration of Copilot for Microsoft 365 by ensuring a ready and secure IT environment, a successful deployment and pilot with selected users and processes, and a clearer understanding of the benefits and challenges of large-scale deployment.

Key benefits:

- Accelerate your AI journey with Copilot for Microsoft 365 and Azure OpenAI.

- Enhance your employee experience and productivity with AI solutions.

- Ensure your security and compliance for AI solutions.

- Leverage the expertise and guidance of our consultants.

- Discover and explore new ways of using Copilot to enhance productivity, creativity, and efficiency, and aligning them with the organization's goals and vision.

Readying your environment
- Assessing the readiness of your IT environment for Copilot for Microsoft 365.
- Configuring security and compliance policies for Copilot for Microsoft 365 usage

Controlled deployment of Copilot for Microsoft 365
- Deploying Copilot for Microsoft 365 to your selected users and devices.
- Providing technical assistance and troubleshooting for any issues during the deployment.

Pilot run with AI champions
- Conducting a pilot test of Copilot for Microsoft 365 with a subset of your users and processes.
- Collecting feedback and data from the pilot users and analyzing the results.

Planning the scale-up
- Workshopping best practices and tips for using Copilot for Microsoft 365 effectively and responsibly.
- Creating a roadmap for scaling up Copilot for Microsoft 365 adoption across your organization.
