4SECURITY IDENTITY PROTECT

MICROSOFT 365 IDENTITY & ACCESS SECURITY

2026

Your identity is your perimeter.

Identity Protect strengthens your Microsoft 365 tenant against credential theft, MFA bypass, token hijacking and Teams impersonation.

THE THREAT LANDSCAPE

Three active threats - one service

These are not hypothetical risks. They are live attack patterns targeting Microsoft 365 tenants across South Africa and globally.

1

Identity-driven cloud breaches

"Storm-2949" style attacks abuse self-service password reset and social-engineer MFA approvals to take over Entra ID accounts - then move laterally to SharePoint, mailboxes and connected services.

Closed by least-privilege access reviews, just-in-time admin access (PIM), and phishing-resistant MFA.

2

Token-theft phishing kits

"Kali365" kits (first seen April 2026) steal sign-in tokens via OAuth and device-code flows - bypassing MFA entirely. Sold cheaply through underground channels, putting every tenant in scope.

Closed by blocking device-code and legacy authentication in Conditional Access, plus session controls limiting token persistence.

3

Teams external chat exposure

Chat with external, unmanaged Microsoft accounts is on by default - opening the door to impersonation and phishing through Teams channels your users trust.

Closed by disabling chat with unmanaged accounts, restricting access to trusted domains, and reviewing Teams messaging policies. Included in every tier.

WHAT YOU GET

Outcomes, not just activities

Identity Protect is designed to deliver measurable security and operational improvements - not a report that sits on a shelf.

Reduced account takeover risk

Credential theft, phishing logins, and token replay attacks become significantly harder to execute.

Measurable Secure Score improvement

Optional monthly KPI dashboard tracks Secure Score deltas, risky sign-in trends and MFA adoption.

Admin protection

Separated admin accounts, reduced Global Admin counts, and just-in-time access for privileged operations.

Controlled external access

Guests and external collaborators operate within defined, auditable boundaries - not open by default.

Audit-ready documentation

Policy documentation, Conditional Access configs, and an implemented-controls summary for governance and compliance.

Faster incident response

Compromised-account containment, token revocation, and sign-out playbooks ready before you need them.

HOW IT WORKS

A structured rollout, not a big-bang change

Every engagement follows a phased approach designed to keep your users productive while we make meaningful security improvements.

1. **Discovery and risk workshop**
   We review your current authentication posture, admin roles, sign-in logs, legacy apps and external access configuration. This is where we size the work and confirm your tier. *0.5–1 day.*
2. **Design and policy mapping**
   We map findings to a recommended Conditional Access policy set, MFA strategy and admin model - tailored to your licensing level and business risk tolerance. *1–2 days.*
3. **Pilot deployment**
   Changes are applied to a small pilot group first - validating policy behaviour and user experience before the broader rollout. Break-glass accounts are protected throughout. *3–7 days, tier-dependent.*
4. **Tenant-wide rollout**
   We deploy department by department, applying user communication templates and MFA setup guides so your helpdesk is ready for the most common questions. *Phased by department.*
5. **Handover and documentation**
   You receive a full admin guide, policy documentation, support pack, and - optionally - an ongoing managed monitoring engagement. *Final day of engagement.*

RISK REDUCTION

What Identity Protect prevents.

- Stolen passwords and phishing logins.
- Password spraying and brute-force attempts.
- Token theft and MFA bypass (Kali365-style kits).
- Unauthorized access to email, SharePoint and Teams.
- Compromised admin accounts and full tenant takeover.
- Insecure legacy authentication pathways.
- Impersonation and phishing through Teams external chat.

Confidence Starts with Protection

Know your identity is protected by experts. Learn more at 4sight.cloud

4Sight Holdings Limited (4Sight) is a multinational, diversified technology group listed on the General Segment of the Main Board of the JSE (ticker: 4SI). Our purpose is to leverage our extensive products and services portfolio, focused on AI technologies, people, and data-focused solutions, to design, develop, deploy and grow solutions for our partners (customers and vendors).

The company's mission is to empower our partners to future-proof their businesses through Digital AI Transformation to make better and more informed decisions in the modern digital economy.

4Sight's business model enables its partners to take advantage of products and solutions within its group of companies, which will allow them to enjoy turnkey Digital AI Transformation solutions across industry verticals.
