

Azure Backup Services

Azure Backup Services is a cloud based service utilising Microsoft Azure to backup, protect, and restore your data when you need to.

Azure Backup Services can replace existing on-site or off-site backups with a cloud-based solution which is reliable, secure, and cost-effective. Backup uses various Microsoft Datacentres from 58 different regions for the remote storage location. The solution stores data in 3 separate locations within the primary data centre and 3 separate locations in an additional data centre.

All data utilising this service is encrypted using Advanced Encryption Standard 256, whether it is from an on-premise or cloud-based environment. Data is stored in the Recovery Services vault in Microsoft Azure. Only you, the client, can unlock this data. No one, including Microsoft, can decrypt the backup data. Backup includes the management of the backup process, data, restore and increments of data, and guaranteed restore times are optionally available.

Main Features:

- Automatic backup and storage management.
- Unlimited scaling.
- Data Encryption.
- Application-consistent backup.
- Long-term retention.
- Optional network throttling available.
- Eliminate data loss with database recovery

Your Data Safe In The Cloud

Incremental Backups

Every Azure Backup component supports incremental backup regardless of the target storage (disk, tape, Recovery Services vault). Incremental backup ensures that backups are storage and time efficient, by transferring only those changes made since the last backup.

Storage

Microsoft Azure data centres are Tier 4, which provides for an up time of 99.95% but with the additional location where data is stored, there will be no downtime and your data will always be safe.

Compatible Workloads

- Files and Folders (Windows Server, Windows Computer).
- Hyper-V Virtual machines.
- Microsoft SQL Server.
- Additional workloads and services are continuously added.

Azure Backup Services Pricing

0 -10 Users	\$35
11-20 Users	\$60
21-30 Users	\$85
31-50 Users	\$100
51-100 Users	\$150
100 -1000 Users	\$180
1001+ Users	\$250
