MICROSOFT 365
COMMUNICATION PROTECT

2024

OVERVIEW

Introducing 4security: Microsoft 365 Communication Protect, a solution to safeguard your organisation's communications

Introducing Microsoft 365 communication protect, a solution designed to safeguard your organisation's communications across your Microsoft 365 tenant. In today's digital landscape, security is paramount, and protecting sensitive information is crucial. Our solution includes basic configurations such as settings in Teams meetings to control presenter permissions and restrict anonymous access, securing Exchange Online by preventing calendar detail sharing with external users, and managing application consent to avoid unmanaged applications. Additionally, it can enforce anti-spam policies, activate Safe Attachments and Safe Documents, and potentially even an implementation of robust information protection labels and data loss prevention (DLP) policies.

With a focus on sensitivity accuracy and expanded protection across all services, Microsoft 365 communication protect can promote adoption through training materials and ensure thorough process governance and project documentation throughout.

Safeguard your organisation's data with our all-encompassing protection setup offerings and maintain a secure environment.

WHY CHOOSE US?

If you want to keep your data secure and your services protected, choose us. We offer a range of options to suit your needs and provide training, governance, and documentation along the way.

Secure your data and services with our comprehensive protection setup solutions. We have different levels of protection to fit your budget and goals, and we help you with training, process governance, and project documentation.

OUR **PROCESS**
