MICROSOFT AZURE
# DATABASE ADMINISTRATOR AS A SERVICE

2025

Having a Database Administrator (DBA) available as a service to proactively monitor and optimise your data usage.

It doesn't matter if you have an on premise, hybrid or Microsoft cloud ERP solution, DBA as a Service assists in managing and monitoring any ERP data platform. While data is ever increasing, "knotting" and causing slow responses, it has never been more critical for companies to have innovative and proactive monitoring in order to meet the requirements to secure and manage their ERP data.

By providing regular benchmark testing on your database's performance in accordance to Microsoft best business practices, the focus can then be on prevention rather than cure.

At the heart of it all lies a continued process of proactively managing your databases through fine tuning them to improve and uphold a high standard of performance.

This enables companies to predict problematic areas in advance, do accurate forecasts on the infrastructure costs for future expansions, and ultimately having the offering to ensure that your data is secured and maintained.

Maintenance Tasks

Backup and Restore Strategy

Proactive Optimisation and Monitoring

Security Management

SQL Managements reporting

DBA AS A SERVICE

MAIN FEATURES

- Fast and Reliable database management solutions.

- Secure your databases and have security managed.

- Proactive monitoring with proactive services.
