

Viatel Cloud Migration

Plan

In the cloud adoption planning stage, our team meticulously creates an inventory of your digital estate, identifying all assets and dependencies. We address any skills and knowledge gaps within your organisation, providing necessary training and resources. Additionally, we establish a robust framework for initial organisational alignment, ensuring all stakeholders are on the same page and ready for the transition. This comprehensive planning phase sets the foundation for a successful migration, minimising risks and ensuring a smooth process.

Migrate

During the migration phase, we ensure a seamless transition from your on-premise infrastructure to a managed cloud environment. Our experts handle the entire process, from data transfer to application reconfiguration, ensuring minimal disruption to your operations. We use best practices and advanced tools to migrate your workloads efficiently and securely. Our goal is to provide a smooth and hassle-free migration experience, allowing your business to quickly reap the benefits of the cloud.

Govern and Manage

Once your cloud environment is up and running, Viatel's Cloud Experts take over the management and optimisation of your new cloud data centre. We meet with you regularly to agree on business commitments and operational baselines, ensuring that your cloud infrastructure aligns with your organisational goals. Our team works closely with you to maintain the stability and performance of your cloud environment, implementing best practices for governance and management. We continuously monitor and optimise your cloud resources, ensuring they remain secure, compliant, and cost-effective.
