Powerful Technologies

Custom Cloud-Native Development

- ISO 9001:2015 Quality Management System
- ISO/IEC 20000-1:2011 IT Service Management
- ISO/IEC 27001:2013 IT Information Security

Europe's largest enterprises are leveraging ACTUM-developed solutions

Cloud Native Workshop

Workshop

Cloud Native

The purpose of this workshop is to assess the benefits of moving or rebuilding our application in cloud deployment.

Our team of specialists will review your plans for the application, suggest improvements that we may bring by migrating to cloud and create an estimate for both operation costs and implementation

SCALABILITY

If you're able to scale, you can take advantage of opportunities when they arise rather than being forced to miss out.

PERFORMANCE

A reliable cloud solution enables businesses to improve performance and enhance their user experience.

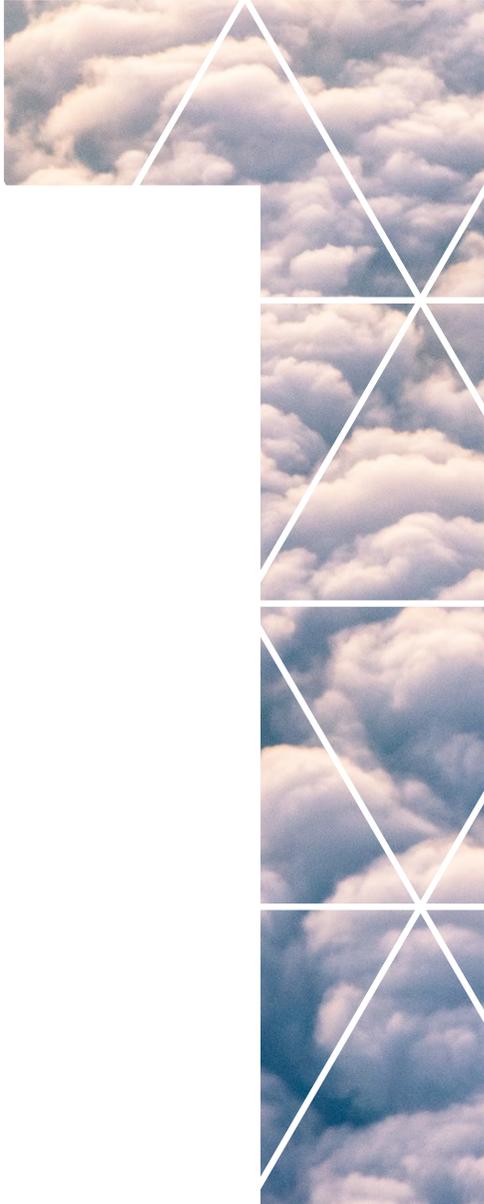

COSTS

By embracing the cloud, companies can drastically reduce the amount they spend on IT operations.

FLEXIBILITY

The users (employees or customers) can access the cloud services and data they need from anywhere and at any time.

CLOUD NATIVE WORKSHOP

ESTABLISH GOALS

First part of the workshop focuses on defining goals of the application, product or simply a workload. We'll be able to create a clear vision of when the project should happen and how we can measure its success.

CLOUD NATIVE WORKSHOP

DEFINE THE FUNCTIONS

In second step, our goal is to define to functionalities. This step is crucial in order to assess whether some of the functions can be deployed in Platform as a Service mode, or move even to serverless, which tremendously reduces the need for maintenance and support of the workload.

CLOUD NATIVE WORKSHOP

DESIGN THE ARCHITECTURE

Rough architecture of the solution will be designed and detailed with information of what are the individual pieces that will make up the infrastructure.

This step will also reveal any dependencies we might approach when moving the workload to cloud.

CLOUD NATIVE WORKSHOP

CREATE A PLAN

Based on the architecture, we will be able to create a plan for either migration or rebuilding the solution from scratch in cloud.

CLOUD NATIVE WORKSHOP

CREATE A BUSINESS CASE

Based on the plan, we create a business case that will summarize the benefits we see and overall costs associated with ownership of the application in current hosting compared to the cloud deployment.

Workshop

Cloud Native

Our Cloud Native package offers a simple, free-of-charge workshop with our leading Azure and DevOps specialist, who will focus on finding the best ways together with your team to migrate your existing business logic or applications to the Azure cloud deployment.

TIMING

Cloud native workshop is a single day workshop remotely or face-to-face meeting.

TEAM SIZE

A software architect, project manager and product manager will lead the workshop for you

COSTS

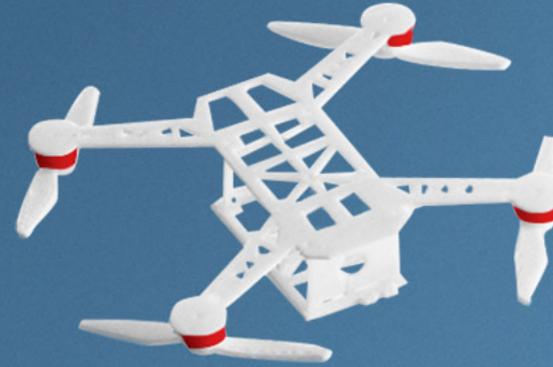

There are no costs associated for you or your organization

RESULTS

You will have a clear business case and readiness to start implementing your solution in cloud

We enable complex organizations to provide consistently outstanding digital experiences **at scale.**
