

# M365 Co-pilot Deployment

## Description

A CoPilot Microsoft 365 user implementation service, designed to correctly deploy CoPilot for M365 into an organisation's existing M365 deployment for a defined number of users. The service performs configuration of core deployment prerequisites within an organisations M365 tenant / deployment of M365 and enables CoPilot for M365 for a defined user.

## Features

The service configures the following M365 services:

- Validates users that require CoPilot for M365 are running the required M365 service (license).
- Implements transcripts for Teams.
- Implements SharePoint Just Enough Access.
- Implements Microsoft Purview and defines Microsoft best practise policies.
- Enable CoPilot for M365 for defined users.

## Out of scope

- Systems not running Microsoft 365.
- Changes and/or corrections resulting from implementing Microsoft Purview.
- Changes and/or corrections resulting from implementing SharePoint "Just Enough Access".
- Deployments running in non-public or special access M365 platforms, including, but not limited to, government, military, or sovereign clouds, such as Germany or China.
