Microsoft Copilot Envisioning

Discover how Microsoft Copilot can accelerate innovation and productivity

Engagement highlights

Review your Microsoft 365 content and information lifecycle management

Understand the capabilities and use cases of Copilot across different departments

Identify data privacy concerns and how to mitigate inappropriate access to data

Develop a pilot deployment and training strategy

Review the capabilities of Microsoft's AI offerings, including Copilot Studio

How can AI help your organization automate tasks, fuel creativity, and provide deep insights using YOUR data? Our Microsoft Copilot Envisioning engagement will help uncover the value and create a strategic roadmap.

What to expect:

During this engagement, we'll partner with you to envision how Microsoft Copilot can help your organization leverage the power of AI. The engagement takes a customized approach by leveraging your organization's content and business use cases.

- Consultative interviews with executives and stakeholders to understand content, information architecture, and business use cases.

- Microsoft 365 sensitive data scan and review of existing DLP policies to assess Copilot for Microsoft 365 security and governance readiness.

- Documented plan to address security, compliance, and governance risks related to Microsoft Copilot deployment.

- Real-time and interactive demonstrations customized for various departments and audiences.

- Deployment and adoption roadmap, including financial analysis of costs and return on investment.
