2-Week Assessment offering recommendations on your current organisational data and governance process.

Unfortunately, purchasing Power BI licenses does not come with the much-needed recommendations of understanding whether your current environment and governance process is ready for a successful Power BI rollout. A very important factor to keep in mind is that Power BI is an empty canvas and only offers the insights and improved decision-making once its plugged in and sources data from a suitable environment.

Challenges

To ensure the many capabilities of Power BI as well as high performance and integrity, much thought needs to go into the current state of your organisation. Without ensuring you're in the best possible position for rolling out Power BI you can end up generating data chaos, resulting in the integrity of reports being questioned and decision makers losing trust in Power BI.

Deliverables

Adatis offers a tried and tested model offering all the necessary recommendations required to avoid the data chaos that many organisations are faced with. The model for this assessment will consist of two phases with each having Business, Technology and Process as focus areas. What you should expect at the end of this assessment is an understanding on whether your organisation is ready to roll out Power BI and a list of recommendations on any areas that need improved.

1. Planning

Putting together a project plan that details the following information:

- High level objectives
- Stakeholder meetings
- Project timelines

2. Current State Assessment

Gathering necessary information about current process and reporting for providing in recommendations. Includes reviewing:

- Source systems
- Data Integrity
- Governance/Data Policies
- Level of Skills
- Existing reporting

		Process						
PHASES	PLAN	Identify stakeholders and ensure meetings are schedules	Project team assembled	Stakeholder engagement	Agree project pan and timeline	Meetings scheduled	Stakeholder briefing / high level objectives	Agree template deliverables
	CURRENT STATE ASSESSMENT	Define the current reporting and information usage baseline and existing analytics platform architecture suitability	BUSINESS		TECHNOLOGY		PROCESS	
			Develop organisation and structure understanding Review the existing use of information and reporting Review user community and personal profiling		Review current architecture and technology Review current reporting and analytics solutions Review data quality		Review existing governance and data policies	

Why Choose Adatis

Adatis 13 years' experience in delivering Business Intelligence and Data Analytics projects globally will offer the guidance necessary for ensuring the highest level of performance is implemented for your organisation as well as best practises across your Power BI solutions. Some of the benefits we have seen from this assessment are:

- Increased adoption rate of Power BI
- Increased user satisfaction across the organisation
- Increased integrity of data

The vast collection of information has changed the way the world interacts. Today business leaders are able to dive into their own analytics and uncover powerful insights

We love helping people make sense of their data.

Adatis offer a targeted exercise to accelerate your journey to Enterprise-Grade Modern Analytics.
