

Azure Security Day

Embrace Cloud! Enfold Security!

Microsoft uses a wide variety of physical, infrastructure, and operational controls to help secure Azure—but sometimes there are additional actions you need to take to help safeguard your workloads because every organization is different. Let us turn on the [Azure Security Center](#) to strengthen your cloud security posture. [Adfolks](#) provides a one-day session, [Azure Security Day \(ASD\)](#) workshop to your [team](#) members for their better understanding of the cloud native security controls for Microsoft Azure. By the end of the day, AdFolks will assist also the team by providing a preliminary [Azure Security Assessment Report](#) which can be used to audit and fix any potential security compromises we found. These are the major areas AdFolks will cover as part of the session.

Urgent Security Challenges

Rapidly changing workloads, increasingly sophisticated attacks, and short supply of security skills

Azure Security Center

Usage the Strengthen Security Posture tool to assess the customer's environment and establish the status of resources

Security Policy and Compliance

Help the customer identify Shadow IT subscriptions and amake sure they are covered by the policies set

Continuous Assessments an Secure Score

Define Network Map, secure score, how to mitigate security alerts, and how to prioritize security work

Optimize/Improve Security and Protect Against Threats

Apply secure configuration standards, explain fusion kill-chain analysis and an attack campaign

Microsoft Defender Advanced Threat Protection

to detect and respond to security threats

Optimize/Improve Security and Protect Against Threats

seamless integration between the Security Center and Azure Resources, Onboarding other cloud resources with Azure Security Center for compliance monitoring

Are you concern about the outcome of this workshop?

You will be benefitted,

- ✓ Understand the basic security concepts
- ✓ Review the current security posture of the organization
- ✓ Compliance Report

A little more from Adfolks' side - During this one-day workshop Adfolks can help in reviewing the current security posture of the organization based on ISO 27001, PCI DSS, SOC TSP and provide the compliance report.

Adfolks is a Microsoft Gold Partner who have strong expertise in Cyber Security, specialized in Azure Security Toolsets. We also provides off-the-shelf cloud native modern SIEM - security monitoring, alerting and auto remediation solutions, and demonstrate how organizations and individuals can use open-source tools to build out modern information security capabilities
