

## Deployment guide within your enterprise infrastructure

### Steps needed to deploy the Add-in

### Data Processing

- Data is processed on the client’s server. No data is processed outside of client servers.
- Data in transit is encrypted using HTTPS with secure certificates
- Results are being displayed to the user and not stored persistently anywhere

### Requirements

- Microsoft Outlook (with MS Office 365)
- Install internally hosted Microsoft Office Add-ins (different to COM/VSTO Add-ins).
- Run containerized web applications with Docker (docker-compose)
- Route internal web applications over HTTPS

### I: Software delivery (advisor)

1. Receive software from advisor AG (Docker image)

### II: Prepare IT environment

2. Use docker or docker-compose to start running the Add-in backend
3. If desired, configure HTTP proxies

For IT administrators: Further details in the [“advAISOR Technical Installation Guide for IT”](#)

### III: Deliver to users

4. Activate add-in in MS Admin Center
5. Upload the manifest
6. Centrally deploy to desired recipients
7. Users are eligible to launch the advAISOR add-In
