

Microsoft 365 foundations and journey

All are **IT priorities**—and the essence of Microsoft 365

Microsoft 365 foundations

enable IT to deliver to end users a modern device that leverages the full set of Microsoft 365 Cloud services for productivity, management, and security

Starting out

Your organization runs foundational **products**, like Windows 10 and Office, but may be skeptical about moving certain functions to the cloud

En route

Your organization is grounded in the foundational **practices**, like BYOD and regular updates, but has yet to implement more advanced, cloud-based scenarios, like integrated security

Homestretch

Your organization maximizes your **investments** from Microsoft 365 products and adopted practices, but could realize additional value by bringing all productivity and security solutions into one platform

Let's meet wherever you are on your Microsoft 365 journey

Getting started on the Microsoft 365 journey

With IT adopting modern management techniques, and devices running Windows 10 and Microsoft 365 apps, immediate cloud value is unlocked for both end users and IT. By connecting your identity system to the cloud, IT gains visibility into the entire digital estate. End users can work with all their files—individual work files and files shared with them across Microsoft 365—from anywhere.

How to get there

Remote productivity

- Deploy Microsoft 365 Apps to keep employees productive
- Roll out Microsoft Teams where people can chat, work together, and meet

Device & app management

- Connect Configuration Manager to Intune for immediate cloud value
- Use Desktop Analytics to keep Windows 10 current

Connected collaboration

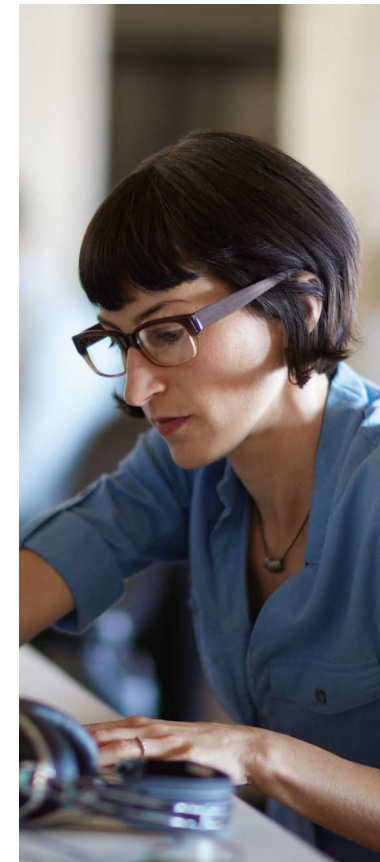

- Deploy OneDrive for Business, SharePoint Online, Exchange Online
- Use Microsoft Search to easily find files, experts, and information

Identities & access

- Adopt Azure Active Directory for single sign-on (SSO)
- Turn on multi-factor authentication (MFA)

What you'll find

- [Easy access to files](#) shared with you; collaborate with others and pick up where you left off
- One enterprise search tool to replace multiple solutions; [maximize your subscription investment](#)
- [Saved time and costs](#) for IT by co-managing devices
- Increased confidence that the [right people have access to the right resources](#)
- [Less strain on Help Desk resources](#) thanks to password-less authentication and self-service portals

[While you're here](#)
have you considered...

Trying Microsoft Search in Bing to discover resources, internal and public

Going directly to Microsoft Intune if you have limited or no existing management tool

Keep going on the Microsoft 365 journey

Strong authentication (MFA) and intelligent conditional access policies in Azure AD, combined with endpoint management and security in Windows 10 and Microsoft 365 Apps, gets you well on your way towards implementing more advanced, cloud-based scenarios, like integrated security. Along with the adoption of Microsoft Teams and mobile solutions to work from anywhere, means improved productivity for end users, plus secure app and device management.

How to get there

Remote productivity

- Create virtual events through Teams, Yammer, or Stream
- Access Office apps and Outlook from your mobile device or Office.com

Device & app management

- Configure Windows Autopilot for zero-touch provisioning
- Manage key apps like Office and Outlook mobile with Intune

Connected collaboration

- Set up Teams for meetings and video conferencing
- Deploy Microsoft Edge

Identities & access

- Use security baselines for Microsoft Edge, Windows 10, Microsoft 365 Apps
- Set Conditional Access policies

What you'll find

- Optimized mobile productivity experience utilizing camera and AI
- Org data on mobile apps that remain protected even in BYOD scenarios
- Live events for improved connections among internal, external stakeholders
- Self-service Windows deployment platform for users to start fast
- Expert guidance on security features to boost flexibility and reduce costs
- Conditional access for the right access to apps and devices

Leveraging Windows Virtual Desktop to scale for remote and frontline workers

Setting up Identity Protection policies in addition to Conditional Access

Go the last mile on the Microsoft 365 journey

IT is focused on eliminating redundant tools and enabling exceptional productivity experiences for end users on PC, Mac, mobile, and web. Advanced analytic tools empower them to make recommendations for increased end user productivity and maximize the organization's investments in Microsoft 365.

How to get there

Remote productivity

- Take stock of redundant productivity tools with overlapping capabilities

Connected collaboration

- Set Microsoft Edge and Bing as default
- Customize Microsoft Search in Bing for improved productivity

Device & app management

- Utilize Productivity Score to get advanced analytics and insights for transforming work

Identities & access

- Bring customer and partner IDs into AAD to enhance collaboration and security
- Take action based on Secure Score suggestions

What you'll find

- **Familiar entry point in Bing** so users can search the corporate network just like they do the web
- **Visibility, insights, and actions** to help users adopt new ways of collaboration
- **Technology experience score** to optimize PC and network performance
- **Historical data to sustain progress** against KPIs with reports to show leadership
- **Decreased vendor costs** by consolidating to one suite or platform
- **Consolidated identities management** to provide seamless collaboration

Microsoft Defender Advanced Threat Protection to help prevent, investigate, and respond to threats

Microsoft Managed Desktop to eliminate IT time spent on commodity tasks

A journey to Modern Work with Microsoft 365

Get industry-leading apps combined with intelligent cloud services and world-class security

Apps

Word

Excel

PowerPoint

Teams

Outlook

OneNote

Services

OneDrive

SharePoint

1. Download & synch across up to five devices

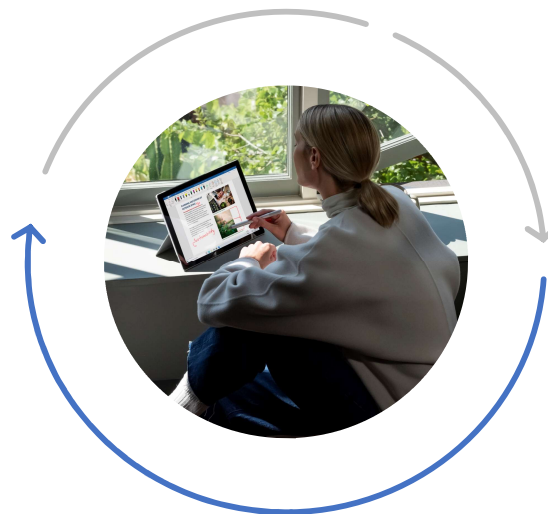

2. Detect threats early before issues occur

3. Simplify through vendor consolidation

4. Streamline IT Administration

5. Save on Process Improvements

6. Always on with 99.9% uptime guarantee

The power of Microsoft 365

Productivity

Flexible, premium devices crafted to maximize productivity and engaging collaborative experiences

Deployment & Management

Zero-touch deployment and unified management drive down costs and complexity

Security

Security from chip-to-cloud—a zero-trust security model that starts with inherently secure Surface devices

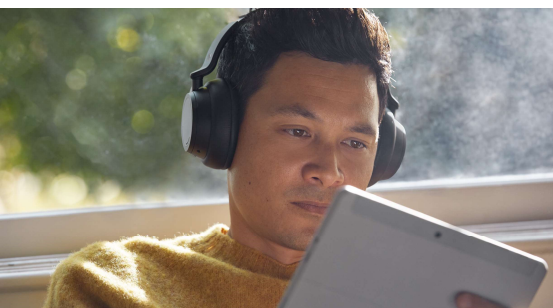

Inclusiveness

Design that focuses on inclusion, learns from diversity, and benefits people universally

Sustainability

Responsible design, sourcing, and manufacturing with sustainable experiences and circularity
