Deep dive into Microsoft Fabric with our Hackathon!

With our expert guidance and support, you can explore the capabilities Fabric has to offer and how it can revolutionise your business.

In contrast to training, this 3-day Hackathon gives your organisation the opportunity to take Fabric for a test drive. Try out features and get a feel for different approaches to the same problem, all with the support and guidance of the Advancing Analytics team to help you get the most out of the hack and share value back to the business.

The Fabric Hackathon is a great way to assess the capabilities of Microsoft Fabric and determine how it can best fit into your business, coupled with our guidance on best practices, limitations, and recommendations.

There are no skills prerequisites for attending our Fabric Hackathon and we encourage team members from all data roles to take part, from report consumers, team managers, business analysts, data modellers, and data engineers.

Learn by doing

The hackathon format provides the ideal opportunity to explore Microsoft Fabric with a direct use case guided by the Advancing Analytics team.

Beyond training

The hackathon format brings your team together with a singular focus encouraging co-learning and collaboration.

Experts on hand

The Advancing Analytics team are there to guide and support your team with real-world experience and scenarios using Fabric.

01.

Day One

Welcome & Introduction

What do you want to get out of this event and how can Advancing support?

Dive in

Let's get everyone set up and into Fabric, looking at capabilities and how they align to different roles in the business.

Make it competitive

Time to break into teams. Each team can explore a different approach to working with the data with the same desired outcome.

Set the challenge

Get familiar with the data. What do we want to get out of it and what can we ask of the data?

02.

Day Two

Hack time

It's full-on hack time with both teams ingesting their data, doing a couple of basic transformations, and getting it to a user-ready state. The Advancing team will be on-hand to offer support and share or best practice approaches.

Copilot time

A core goal of these hacks is to experiment with some of the cutting-edge features in Microsoft Fabric, including Copilot.

03.

Day Three

Review

Time to talk about best practices and approaches to Fabric architectures. Does it meet the business needs and what does your future data platform look like?

Time for playback

What worked; what didn't? Each team showcases their approach and their outputs. What did they like, and how good was the outcome? This is a great opportunity to share what the team has achieved with the wider business.

Why Advancing Analytics

We're a Microsoft Solutions Partner in Azure and Data & AI, with Specialisations in Analytics and AI & Machine Learning, alongside multiple MVP awards. We've been working with Fabric since it was in private preview, so you can be sure you're in safe hands as you explore Fabric.
