

Get data from external independent systems together in a centralized location

ABOUT : we help clients transform their system's data from 1s and 0s unused cost to a company asset and valuable resources

Data Warehouse

WHAT WE OFFER

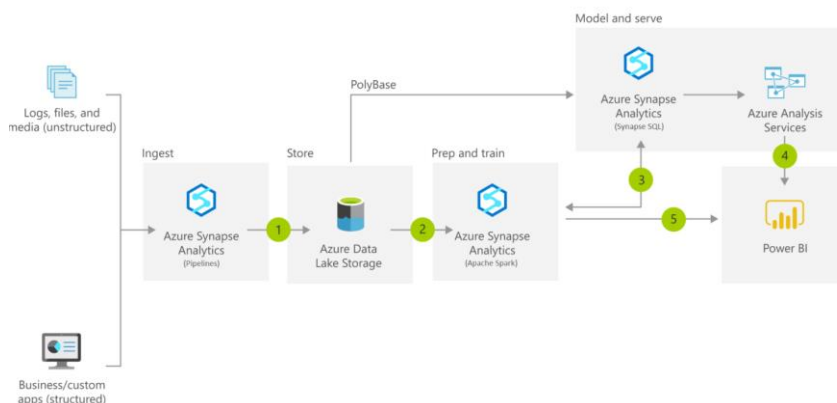

Our Scope:

- Maximum of 3 data sources
- Data sources should have a prebuilt connectors in Azure Data Factory or Azure Synapse Analytics
- Data stored in the data source is structured data
- Simple to Medium data transformation will be required for the Data Warehouse

The solution leverage all Data Warehouse related components in Azure like Data Factory, Data Bricks and Azure SQL Datawarehouse

The solution allow companies to transform their scattered data across different systems on-premises to be consolidated and transformed to meaningful data to provide insights to the business.

It transforms data from being a cost to a valuable resource to the business
