

Secure & Improve Windows 10 & 11

Windows clients are a fundamental technology in virtually all organizations. This includes the burden of provisioning, update, managing, and secure those devices. Agile IT provides a collection of services based on Microsoft products and services to reduce the continued impact to customer IT departments and end-users.

Organizational Challenges

There are common IT challenges and legacy processes when managing Windows clients

- Handling outdated systems and software
- Streamlining inefficient operational structures
- Implementing automation in IT processes
- Countering escalating security threats
- Ensuring industry compliance
- Keeping up with rapid technology advancement
- Developing effective IT management strategies

What We'll Do

Agile IT provides implementation, planning, deployment, and migrations for organizations that are combine various systems which include Microsoft 365.

Upgrading to Windows 11

For many organizations running Windows 10 Pro or Enterprise. Agile IT leverages Microsoft Intune to assess, prepare, and deliver results for your business.

Our Process

1 Onboarding

Initiate client engagement with a thorough understanding of your specific IT needs.

2 Improve

Enhance your Windows 10 & 11 environments for optimal performance and security.

3 Continuous Support

Provide ongoing monitoring, updates, and support to ensure your systems remain at peak efficiency.

Windows clients aren't just for your local hardware. The desktop experience is also available via remote desktop that's delivered as a service and Agile IT can help provide solutions that align with your Microsoft licensing, budget, and requirements with:

- **Windows 365**
- **Azure Virtual Desktop**
