

Microsoft Teams Rapid Deployment

Accelerate your Teams implementation safely and securely in a matter of weeks. Organisations are faced with an unprecedented need to quickly enable home and flexible working for employees.

Microsoft Teams is the enterprise cloud collaboration platform that will enable employees to safely make calls, video conference and collaborate on documents with colleagues wherever there is an internet connection- on corporate devices, home computers or smartphones.

We have seen first-hand the benefits the implementing Teams has had for customers and have developed designs and implementation methodologies to best meet public sector business requirements. Fast-tracking Teams within your organisation will enable staff to work more efficiently and effectively from home.

Enables users to collaborate from any location using any device with internet connectivity.

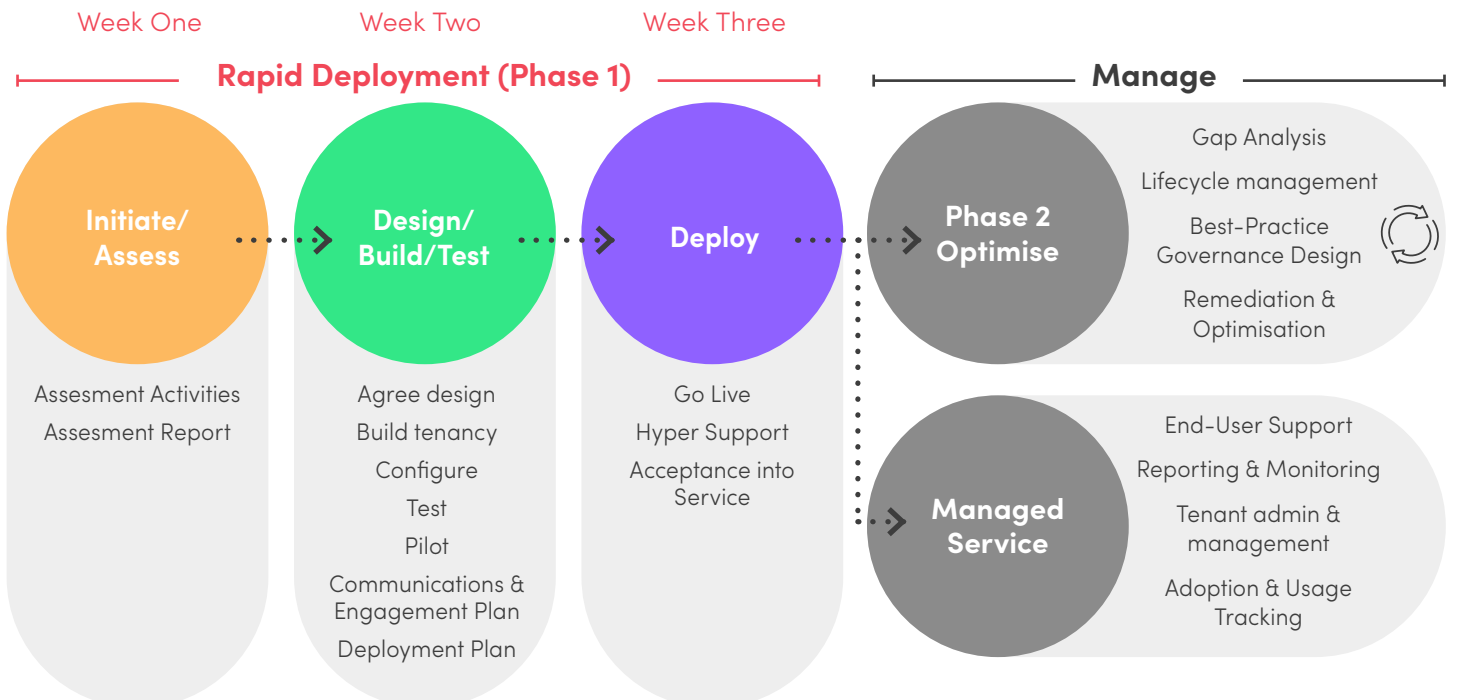

Employees can make calls, video conference and collaborate on documents with their work colleagues.

Employees can use their personal computers and smartphones to work effectively and efficiently.

Many organisations were likely planning to implement Teams in the future but **implementing it now** will enable your employees to **continue to collaborate and communicate** with each other, whatever their personal circumstances.

In response to the rise in popularity of hybrid working, Agilisys has developed a Teams Rapid Deployment approach that implements the minimum safe viable solution within a matter of weeks.

Implementation timescales may vary from 3-5 weeks- subject to pre-requisites

There are four types of rollouts we can offer, depending on your organisations need and your technical infrastructure:

Teams – Locked Down

- Teams like Skype for Business
- Calls, chats, meetings including Teams live events
- No Teams-based collaboration functionality

Communication – For organisations who do not currently have a form of instant messaging and audio/video conferencing.

This will allow employees to be able to make and receive Teams calls through the app, host Teams meetings and chat with colleagues either individually or in groups. Calls and meetings allow video and screen sharing capabilities. We would deploy Teams both for corporate managed devices as well as employees’ personal devices, which would facilitate wider communication where you do not have enough laptops to cover your whole organisation.

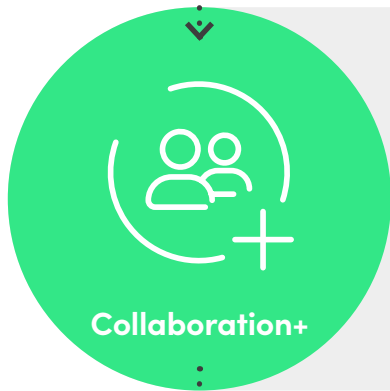

Internal Collaboration

- Calls, chats, meetings including Teams live events
- Full internal-only Teams collaboration
- Safest minimum governance for deployment inc. BYOD
- Manual creation of new Teams

Collaboration – Delivering Teams for internal collaboration allows for all of the communication functionality to be implemented.

This includes the wider Teams collaboration capabilities, which would give teams the ability to create shared workspaces; providing them with a virtual cloud-hosted area to easily share all team related content, co-author files, integrate with other systems and more. This requires both OneDrive for Business and SharePoint Online to be configured for use with Teams – however wider configuration of both would not be included.

External Collaboration

- Calls, chats, meetings including Teams live events
- Full Teams collaboration
- Safest minimum governance for deployment inc. BYOD
- Simple self-serve Teams creation – including guest access

Collaboration+ - Our Collaboration+ deployment delivers all the benefits of communication and internal collaboration, while also allowing you to safely open approved teams to add external guests into their workspaces.

We recognise that for many public sector organisations, it is also important to be able to collaborate within teams which include external organisations including suppliers, third-sector organisations and colleagues across other public sector organisations.

Best-Practice Governance

- Fully governed deployment
- Automated provisioning solution
- Retrofit best-practice governance
- Tenant-wide scope

Phase 2

Once Phase 1 is rolled out, we can work with you to review and plan the best practise level right for you and customise this depending on your organisations needs.
