Agility Partners

Agility Partners is proud to offer a comprehensive solution designed to streamline and optimize your Windows device deployment process through the Microsoft Intune Autopilot system. This offering is meticulously crafted to address the challenges of deploying Windows 10/11 devices efficiently, ensuring a seamless and secure integration into your existing IT infrastructure.

Upon clicking Contact Me, our team will reach out to schedule a pre-engagement call where we will scope the project based on your needs and give you an estimate for duration, availability and pricing.

Agility Partners was born as a global Lotus Notes consulting firm but pivoted with the market and now focus almost exclusively on the Microsoft 365 "Modern Workplace".

Phase 1: Planning & Implementation

- Define Business & Security Requirements
- Develop a comprehensive Windows 10/11 Autopilot Design/Scope document
- Discuss and plan patching processes and BitLocker key storage
- Review and define security baselines, dynamic groups, and OS customization
- Package applications for Intune deployment and review application compatibility
- Design and scope Intune policies and Autopilot access and deployment.

Phase 2: Autopilot Implementation & Testing

- Configure pre-provisioned and Autopilot based on the design document
- Create user-driven and White Glove profiles
- Set up Intune connectors and package applications
- Conduct extensive testing of profiles, policies, and deployment processes
- Pilot rollout and cybersecurity scans
- Provide admin knowledge transfer

Phase 3: Autopilot Production Handoff

- Rollout and support the production environment
- Transfer knowledge of Autopilot and Azure Active Directory sync to administrators
