

Accurate planning is both a science and an art. When applied correctly, this complex process has the ability to give [powerful insights](#) into future trends and demand planning opportunities. AGR's PlanPro module gives you full access to the demand and supply planning features that helps you [find the spot between excess inventory and a shortage](#).

S&OP planner

Match demand with supply. This facilitates cross functional collaboration between sales and procurement that allows you to plan your sales on micro and macro levels.

Connected items feature

Connect your item's data. Automate the replenishment process for substitute items by connecting the sales history and stock.

Agile weekly forecasting

Upgrade your forecasting scope to a weekly level and respond to changes quicker. Generate more reactive forecasts by focusing on the granular view.

Custom forecasting profiles

Give your new items a demand profile. Create a forecasting profile to seasonal items to ensure the right inventory is available for the markets demand.

Automatic stockout bridging capabilities

Stockouts may be unavoidable, but they distort the forecasting pattern data. We are able to automatically apply sales values when you are stocked out. This ensure you have accurate forecasting data for the future. We can even show you the sales revenue you lost out on.

Customer level breakdown

Get visibility into who is buying your items. We provide customer level insights to give you visibility into your customers' sales history. By identifying your top customers, you can prioritise the relationships that matter most.

Configurable forecasting parameters

Choose your forecasting parameters. These parameters include forecasting model selection, forecast end date, forecast start date, outlier detection, historic forecasting data, and many more.
