

Ordering correctly is a process. We understand that you have your own unique ordering workflows for managing your inventory. Our sophisticated data analytic tools give you the opportunity to [automate](#) your ordering capabilities while keeping your individual workflows intact. AGR's OrderPro module gives you the ability to control the most important parts of your [ordering process](#).

## ABC configuration

Access ABC calculations for all relevant parameters. Not only can you classify your top ranking items, but you also get ABC classifications on a location level to create item level strategies.

## Scheduled orders calendar

Automate your ordering process through our scheduled order calendar. Fully interactive, it keeps your orders top of mind to secure a smooth flow of goods.

## Advanced safety stock capabilities

Achieve your desired service level through safety stock. AGR removes demand uncertainty with a dynamic safety stock function that is updated daily.

## Automatic order exception alerts

We help speed up your order review process. AGR flags any anomalies so nothing falls between the cracks.

## BOM calculations and replenishment proposals

Get BOM demand transparency. Secure raw materials and make purchases in a timely fashion. With multi-level lead times, you can also maximise sales on the finished goods.

## Configurable order parameters

AGR lets you choose your ordering parameters. You can configure your orders based on lost sales, order coverage days, min/max stock level, sales order settings, and more.

## Container optimisation

Optimise your logistic costs. You can constrain an order to fill up a container or truck load with an optimised product mix.

### Onboarding

- Tailored onboarding and training
- Full integration with ERP

### Customer resources

- Live in-app chat
- Knowledge base access
