AGRIDATA
Stay connected with Your crops

Agridata allows the user to control and manage all farm resources from anywhere in the world.

Agridata is an automated system for collecting, managing and data presentation for agrotechnical treatments and agricultural production processes that will help you increase production effectiveness and profits generated by your farm.

- Get full insights into ongoing farm field works without replacing your current machinery.
- Agridata works with any agricultural vehicle and machine on any device.
- Automated agrotechnical treatments registration, reports and analysis presented in a friendly form.
- Identify issues and unreliable operations in your farm.
- Real-time production costs tracking, employee and machine monitoring.
- Fully automated reports that will help you to obtain production certificates (eg GlobalGap, etc.).
- Manage warehouse inventory and crops, get weather information and alerts about a possibility of diseases and pests occurrence.
