

Enterprise Cloud Automation Hub

Establish your Automation Hub and embrace a unified control plane to provide IT as a Service

Determine your service capabilities matrix and integrate automation techniques to present your services to your customers of IT

What is Automation Hub?

Automation Hub is your gateway to Cloud. It provides a unified framework to easily onboard services and present a portal to your users via ServiceNow. By using a modern automation architecture it provides a flexible framework so you can integrate with existing automation stacks which are successful and offer standard stacks, as well as DevOps Services..

Why customers use Automation Hub

- Standardize IT service stacks and safely onboard cloud services
- Create procedures that can be turned into workflows
- Automate technology stacks to save time and improve quality

Establish your Automation Hub

- Deploy the Automation Hub framework
- Integrate with 3rd party systems
- Create a Service Catalog

Build the foundation

Automate Stacks

- Automate the creation of common Azure stacks
- Present stacks into your service catalog
- Automate deployments and save time

Relentless Automation

Embrace IT as a Service

- Automate change control and approval processes
- Expand into full environments on demand
- Reduce risk and improve quality of service deployments

Give your customers a great experience
