

WHAT WE DO

Optimize

Helping building material businesses process orders faster and with fewer human errors.

Empower

Enabling your sales staff to focus on building relationships with customers instead of data entry

We are the future of your business

We use advanced AI to help your customer service reps (CSRs) respond to clients:

- ⦿ Fast and Accurate: Ensures order processing is completed quickly and without errors.
- ⦿ Seamless Integration: Integrates with common ERP systems for smooth operation.
- ⦿ Convenient: Allows CSRs to complete their tasks without leaving Outlook.

USE CASE: Managing complex inventories and matching those against open-ended customer requests is time-consuming and error-prone. This prevents CSRs from focusing on the more enjoyable aspects of their job, such as nurturing relationships with customers. Our streamlined AI software takes care of parsing requests, selecting the right SKUs, and provides lots of option so that CSR can maximize their productivity.
