aiden

Agility Security Visibility

One platform to manage Windows endpoints—securely and automatically.

Agility

Adapt faster to business needs by automating the delivery of applications, patches, and security updates. Aiden responds to change in hours—not weeks.

Security

Maintain a hardened, compliant Windows environment across every endpoint. Aiden reduces attack surface by enforcing your security posture through automation.

Visibility

Get real-time insight into endpoint compliance, patch status, and configuration drift. Aiden surfaces issues before they become problems—no manual audits needed.

Who We Are?

Aiden is a cybersecurity and endpoint management company that helps IT teams shift from reactive maintenance to proactive control. We combine Intelligent Automation with deep Windows expertise to simplify endpoint configuration, compliance, and security.

What We Do?

We eliminate manual IT tasks like application packaging, patching, and compliance remediation. Using plain-English policies, Aiden configures every Windows device to your desired state—automatically and securely—so your team can focus on strategic work, not firefighting.

Feature	Benefit
Full-Provisioning™ for Windows Endpoints	Fully automates the configuration, application packaging, security, and compliance setup of a Windows machine—from out-of-box to productive. No touch imaging. No task sequences. No guesswork.
Continue Before Logon	Installs updates, applications, policies, and remediations *before* the user signs in, minimizing vulnerability windows and eliminating common first-login issues.
Application Packaging as a Managed Service	We handle all app packaging—custom or commercial—and deliver them via AidenBot. Our library has over 2,500 proven packages, continuously updated, so your team doesn't waste cycles rebuilding what already works.
Human-Readable Desired State Policy (DSP)	Your configuration lives in plain English, not scripts. Anyone on your team can understand and audit it. This policy drives compliance, automation, and packaging.
Built-in Compatibility with Any Deployment Tool	Aiden runs on-demand or scheduled from any system—ConfigMgr (SCCM), Intune, Ivanti, or custom tools. No agents, no elevated permissions needed. You stay in control.
Automated Patching & Remediation	No tickets. No manual patching. Aiden detects and remediates vulnerabilities, misconfigs, and missing apps continuously—based on your DSP.
Real-Time CVE and Misconfiguration Reporting	AidenVision surfaces exactly what's non-compliant, when it broke, and how it'll be fixed—automatically or by your schedule.
Cuts Vulnerabilities by Over 90% in 30 Days	Aiden remediates every critical CVE and config drift tied to your DSP. No backlog. No "best effort." Just actual results.
Recover from Ransomware in Under 1 Hour	Aiden re-provisions machines rapidly from your DSP—without reimaging. You get the same apps, configs, and policies, fully automated.
In-place OS Upgrades without Complexity	Need to move to Windows 11? Just update your policy. Aiden handles the sequencing, packaging, and enforcement—no wipe-and-load required.
Accelerate Your Intune Adoption with Aiden	Whether you're moving to Intune, Aiden makes the transition frictionless. The same policy and packaging work everywhere. Aiden is built to enhance Intune.
