INSIGHTMAKER CLOUD MIGRATION DATA READINESS ASSESSMENT

Planning for a migration to the cloud includes understanding what data you will be migrating and what you will be leaving behind. This helps you maximise the cost efficiency of your new cloud platform, correctly budget for the required storage, and dispose of redundant and obsolete information.

An InsightMaker Cloud Migration Data Readiness Assessment brings clarity to your data migration requirements. We install a local copy of InsightMaker, which is configured to run a crawl across the network drives that you are considering migrating. InsightMaker will tell you what percentage of content is text and break down all of your files by type. It will show you how much duplicate data you have and identify which files are duplicates. It will also itemize content that hasn't been edited in more than a set period.

Finally, it will tell you what information you have that is high risk because of PCI, PII or Personal Data contained within it, allowing you to plan to migrate this content to a safe haven.

Up to 80% of your data may be unsuitable for migration to general cloud storage without remedial protections. An InsightMaker Cloud Migration Readiness Assessment can significantly reduce the costs and risk associated with a bulk unfiltered migration.

What is involved?

The whole process takes 11 days to complete, plus any time required by you to commission some infrastructure for us and to absorb the findings of the report.

Preparation

In the 2 weeks prior to the audit, you will be provided with the specifications for the required infrastructure and will carry out your change approval activities and commission the environment. You will need to provide us with the required access to your environments. This could be VPN, remote desktop, or you could ship us a laptop.

Day 1

Architecture Workshop – here we discuss access to the service, integration with your security services for authorisation, and access control. We identify and scale the source for the content to be indexed and analysed.

We write up the architecture in our standard format and provide this for you as reference material.

Day 2

Migration workshop – we figure out what information constitutes current, useful content and what types of information are appropriate to migrate to your new cloud platform. We write up the requirements.

Day 3

Deploy InsightMaker and associated services.

Day 4

Configure the detection rules.

Day 5 – 8

Crawling / discovery of the source information and enrichment with metadata according to the standard detection rules.

Day 9 – 10

Generation of reports

Day 11

Report Playback Workshop – We explain the volumes and age of different types of content and how much duplicate data you have. We show what data is considered current and valid for migration to inform your cloud planning exercise.

Deliver reports and service shut-down.

	Day 1	Day 2	Day 3	Day 4	Day 5
Week 1	Architecture Workshop	Configuration Workshop	Install	Configure	Crawl
Week 2	Crawl	Crawl	Crawl	Create Reports	Create Reports
Week 3	Playback Workshop				

INSIGHTMAKER CLOUD MIGRATION DATA READINESS ASSESSMENT

What do you get?

- Forensic examination and enrichment of unstructured information
- Classification of current, out-of-date and duplicate information
- Visibility of more than 30 information metrics, including quality, quantity, and usability
- Identification of high-risk PCI, PII, or Personal Data
- Detailed file listings to support cloud migration
- Overview reports for an at-a-glance summary
- A playback workshop to explain our findings

What are the benefits?

- Gain accurate insight into the scope of cloud migration needed
- Build and prioritise a programme based on statistical outputs
- Eliminate redundant and obsolete data transferred to the cloud
- Cut cloud infrastructure costs by catering for the right information only
- Helps to inform and optimise archiving and disposal strategy
- 'Infrastructure-in-a-box' works in existing cloud or on-premises environments
- Quick and easy process

SERVICE PRICE

Product	Description	Price
InsightMaker Cloud Migration Data Readiness Assessment	Installation of the software and execution of the audit activities described	£15,000
Per additional source / 1TB of content	Crawl an additional source or scale to cater for additional TB of content	£5,000

We are looking forward to investing further in Aimi's cutting-edge technology. Working with InsightMaker over the next five years will help us deliver our services at maximum efficiency, right across our business.

- Mark Froggatt, Head of Solutions at Anglian Water's @one Alliance

We believe that companies who win at data will become their market leaders

We are a tech company that specialises in information. We believe that companies who win at data will become their market leaders, so we built a software platform to make sure our clients are first across the line.

Put it like this: you know the way your company has a ton of data in clouds, lakes, networks, computers and devices? We've found a way to organise it and link it all together. The result is improved productivity, compliance and privacy. Which is fine. But things get really interesting when our data scientists plug their AI solutions into the platform to drive amazing insight and incredible automation. That's when you get real competitive advantage. That's when you start to win.
