OUR SERVICES | TRANSFORM

Data and Digital Foundations.

Our Services put data at the heart of your digital service transformation, delivering insight that drives positive outcomes for your business.

Build a solid foundation for your data and information, control your data, uncover insight at ease, and make quick, agile, and responsive decisions. It's key to opening your data transformation.

We put in place data architectures, platforms, and governance, making it easier for your data analysts, data scientists, and wider workforce to explore and benefit from your data — and delivering your data strategy at speed.

By implementing new data platforms, our data foundation service will bring your data strategy and roadmap to life. If you have an existing data platform, we'll teach it some new tricks so you can achieve your data and business goals. Our technology platform architects will work with you to design logical, conceptual, and physical architectures, before in cloud or on-premises implementation.

Following an agile user-centric approach, our data architects will organise your data into data domains, subject areas, and data models. Our data engineers will work in an iterative way, building pipelines to fill your data warehouse, data lake, or data lakehouse with high-quality trusted data. These will provide your product teams with the solid foundation and confidence they need to build new data products and digital experiences for your business.

Features & Benefits.

Our expert services are designed to deliver maximum benefit with a flexible approach – here's what you can expect...

SERVICE FEATURES

- Bring your strategy and roadmap to life.

- Implement new data architectures and platforms, or help you boost your existing platforms to make them work for you.

- Cloud or on-premises data & digital platform design and implementation

- Build automated data pipelines to create next-generation data lakes or extend existing enterprise data warehouses

- Integrate data from structured, semi-structured and unstructured sources

- Leverage our own data discovery platform – Aiimi Insight Engine

- Enable Data mesh concepts and decentralised architectures

- Integration with leading analytics and visualisation tools, such as Power BI

- Productionisation platform for advanced analytics and data science models

SERVICE BENEFITS

- Drive new data initiatives, upgrade existing ones, or improve outcomes

- Provide teams with the foundations to build new data products and digital experiences

- Maximise value of data assets through a data platform

- Set up foundation for analytics, data science, machine learning and AI

- Build trust in your data through curated and certified datasets

- Apply data security and role-based access

- Centralised platform for applying data governance and security

- Make accessing data easier for everyone who needs it

- Drive transformation towards a data-driven and digital-first organisation

We are a creative tech company specialising in data and information. Our expert services and our AI and machine learning technologies deliver data and digital outcomes for real business impact.

Our Aiimi Insight Engine gives your organisation a complete overview of your data universe to reveal new relationships and unlock valuable insights.

The Aiimi Insight Engine interconnects valuable information across all enterprise systems for a comprehensive understanding of your data universe and acts as an accelerant to our services...

Our Software ⟵⟶ Our Services

Our Services team put data at the heart of your digital service transformation, utilising our Insight Engine and sector experience to deliver insight that drives positive outcomes for your business.

Department for
Business, Energy
& Industrial Strategy

BEIS.

At the Department for Business, Energy and Industrial Strategy (BEIS), we built a near real-time Data Management System to quickly and securely capture and enrich a vast amount of COVID-19 business support grant and Green Homes Grant data collated from more than 300 Local Authorities. This platform enabled BEIS to harness high-quality data, generating insights to more accurately assess the impact of schemes and support future policy decisions.

> The data management system at BEIS lays the foundations for a great data service. It brings together tech from Microsoft Azure and Databricks to create a platform that not only supports our current needs but will change and grow to match our ever-evolving data journey.
